

LIFT MODERNISATION

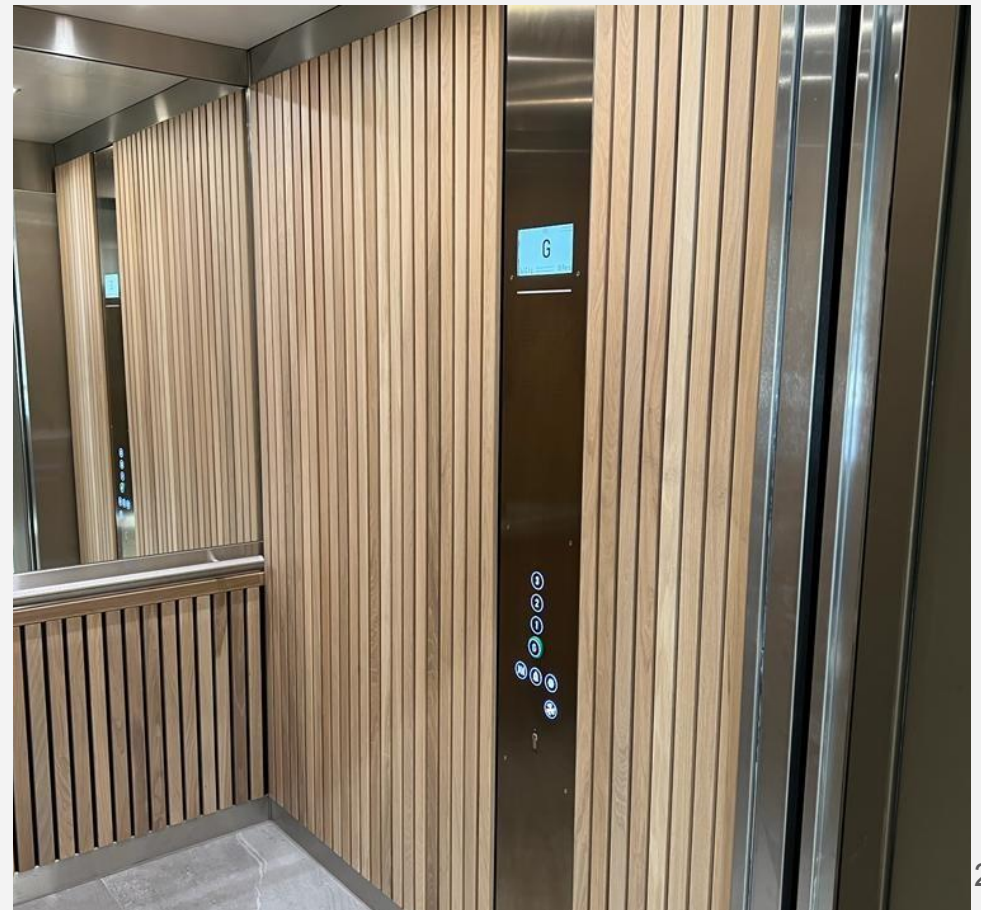

ACUTE
ELEVATORS

Lift Modernisation

**transform your lift.
transform your building.**

**modernise performance. improve reliability. elevate
the experience.**

A smarter way to upgrade your lift — without the
disruption of starting from scratch.

modernisation that
speaks for itself

introduction

modernisation made simple

Upgrading your lift might sound like a major project — but with the right partner, it doesn't have to be.

At **Acute New Elevators**, we make lift modernisation straightforward, clear, and completely tailored to your building. Whether you're dealing with reliability issues, outdated equipment, or simply want to improve the look and feel of your lift, we're here to guide you through it.

No jargon. No unnecessary upgrades. Just practical solutions that deliver real results.

From the first conversation to final handover, everything is designed around one goal — making your lift work better for you.

built for everyday
use. designed to last

smooth, reliable
journeys - every day

is it time to upgrade?

your lift is talking — are you listening?

Most lifts don't suddenly fail — they gradually become more expensive, less reliable, and harder to live with.

Sound familiar?

- Breakdowns are becoming more frequent
- Repairs are taking longer (and costing more)
- The lift feels slow, noisy, or inconsistent
- Parts are harder to source
- The interior looks tired or outdated

If you're noticing any of these, your lift is already telling you it's time to act.

The good news? You don't always need a full replacement — just the right upgrade in the right place.

Most performance issues don't require full replacement. With the right modernisation, you can resolve common faults, improve reliability, and extend the life of your lift — all while keeping disruption to a minimum.

how we make it easy

from first look to final result — we handle it all

We've refined our process to keep things simple and stress-free.

step 1 – we assess your lift

A detailed survey highlights what's working, what isn't, and what can be improved.

step 2 – you get clear options

We explain your choices in plain English — from small upgrades to full modernisation.

step 3 – we deliver the work

Our team manages everything, keeping disruption to a minimum.

step 4 – you enjoy the results

A smoother, more reliable lift that's built to last.

It's that simple.

reliability, built in

modern performance, built into
your building

your options

upgrade what you need — not what you don't

Not every lift needs replacing. In many cases, targeted improvements can deliver a huge difference

quick upgrades

Fix the common issues — doors, controls, lighting — and improve day-to-day performance fast.

major modernisation

Upgrade the key systems behind the scenes for a noticeable improvement in reliability and efficiency

full replacement

Start fresh with a completely new lift — ideal for older systems or long-term investment plans.

We'll always recommend what's right for your building — not the most expensive option.

what you'll notice first

smoother. quieter. more reliable.

Up to 70% reduction in breakdowns after modernisation

The difference after modernisation is immediate.

A smoother, quieter ride

Accurate, safe levelling

Faster response times

Fewer breakdowns

Lower running costs

It's not just about fixing problems — it's about improving the everyday experience for everyone who uses your building

safer by design

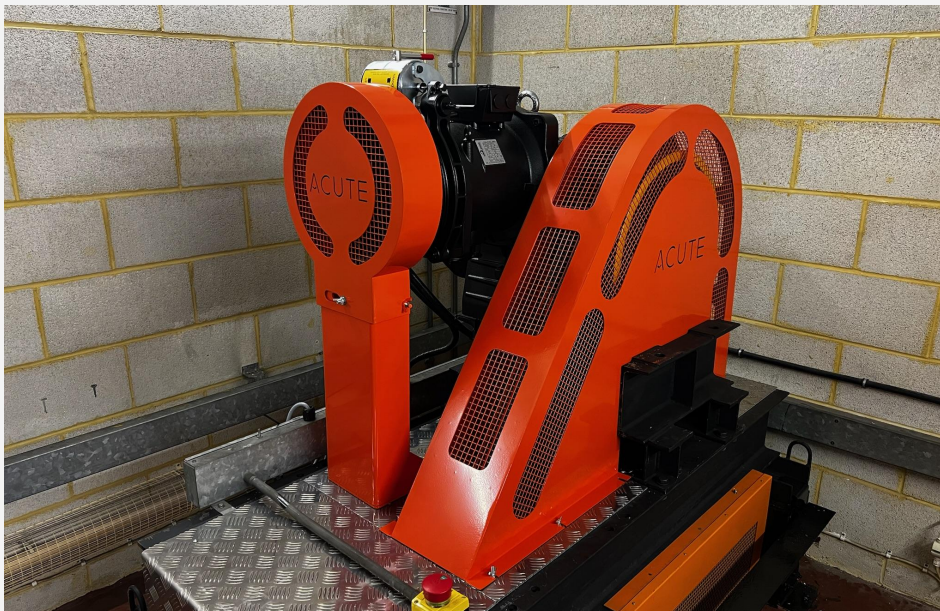

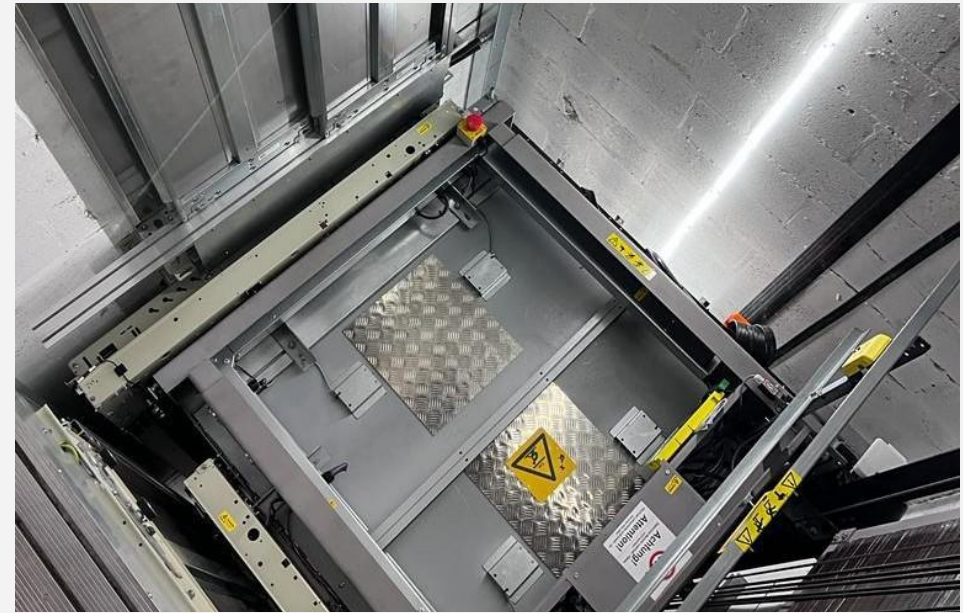

peace of mind, built in

Older lifts often fall behind modern safety expectations — even if they still “work”.

Modernisation brings your lift up to today’s standards, with:

- Improved door safety systems
- Reliable emergency communication
- Better levelling accuracy
- Compliance with current regulations

For building owners and managers, that means less risk — and more confidence.

a lift that looks the part first impressions matter

Your lift says a lot about your building.

A modernised lift can completely change how the space feels:

- Fresh, contemporary interiors
- Better lighting and visibility
- Wider, smoother doors
- A more welcoming experience

It's a simple upgrade that makes a big difference — especially in residential and commercial settings.

small upgrades
big difference

every component. carefully considered

less disruption than you think

we work around your building — not the other way round

We know your building doesn't stop — so neither do we.

Our projects are carefully planned to keep everything running smoothly:

- Clear schedules and timelines
- Minimal noise and disruption
- Safe access maintained at all times
- Efficient, well-managed installation

In most cases, modernisation is completed faster than people expect.

Most modernisation projects completed in 2–6 weeks

a smart investment

spend once. save long-term.

Modernisation isn't just a cost — it's a smart way to reduce ongoing expenses.

You'll benefit from:

- Fewer repairs and callouts
- Lower energy consumption
- Improved reliability
- Extended lift lifespan
- Increased building value

Put simply — you spend less fixing problems, and more time enjoying a lift that just works.

Many building owners delay modernisation due to concerns around cost or disruption. In reality, a well-planned upgrade reduces long-term spend, improves reliability, and avoids the risk of unexpected failures.

case study

when performance matters
modernisation that delivers

20+ tonne lift modernised with zero
structural changes

high-capacity lorry lift modernisation

London theatre

Not every lift modernisation is straightforward — especially when you're dealing with high loads, live environments, and ageing infrastructure.

In this case, a heavily used lorry lift within a busy London theatre had become unreliable, outdated, and increasingly difficult to maintain. The system needed more than a simple repair — it required a full electrical modernisation to restore performance and ensure long-term reliability.

the challenge

- Ageing control system with limited diagnostics
- Increasing downtime impacting operations
- Outdated electrical infrastructure
- Safety systems no longer aligned with current standards
- Requirement for **precise levelling** to align with lorry trailer beds

our solution

We delivered a complete electrical modernisation — upgrading the lift without the need for full replacement.

- Installed a **modern control system** for improved performance and fault diagnostics
- Carried out a **full rewire and new containment installation** to future-proof the system
- Upgraded all **safety circuits and door systems** to meet current regulations
- Engineered a **bespoke levelling solution** to ensure accurate alignment for loading operations

the result

- Significantly improved **reliability and uptime**
- Enhanced **safety and compliance**
- Smoother, more controlled operation
- Reduced maintenance requirements
- A future-ready system designed for continued heavy use

why clients choose acute new elevators

a different kind of lift company

We're not tied to one manufacturer — and that's exactly how we deliver better outcomes.

- Independent — we specify what's right, not what we're tied to
- Faster response and delivery than multinational providers
- Straightforward, honest advice
- Proven experience across complex and specialist lift systems
- Direct communication — no layers, no delays
- Complete project ownership from start to finish

No unnecessary upgrades. No sales pressure. Just the right solution, delivered properly.

ready to take the next step?

If your lift isn't performing the way it should, now's the time to act.

A simple assessment today can prevent costly issues tomorrow.
