

Tailored Industries

The AI-native consulting firm built for how work will actually get done

Tailored Industries is an AI-native consulting firm that embeds world-class engineers and strategists into your team to design, build, and scale intelligent systems—while enabling your workforce to operate as AI-first.

We identify where your organization is wasting time and money, then rapidly build and deploy automation that drives measurable ROI.

Every company has AI on the roadmap. But few have the infrastructure—human or technical—to turn it into real outcomes.

The reality

- Teams are underwater and focused on the day-to-day execution, not AI.
- AI is evolving weekly – your org can't keep up.
- Most companies are already falling behind (and don't even know it yet).

The stakes

- The longer you wait, the more value you leave on the table
- Competitors will pull ahead
- You're already burning money today by not automating
- Building internally isn't fast—or realistic

What's possible when AI is done right.

Accelerating Large-Scale Test Migration with LLMs

Charles Covey-Brandt · Follow

Published in The Airbnb Tech Blog

7 min read · 6 days ago

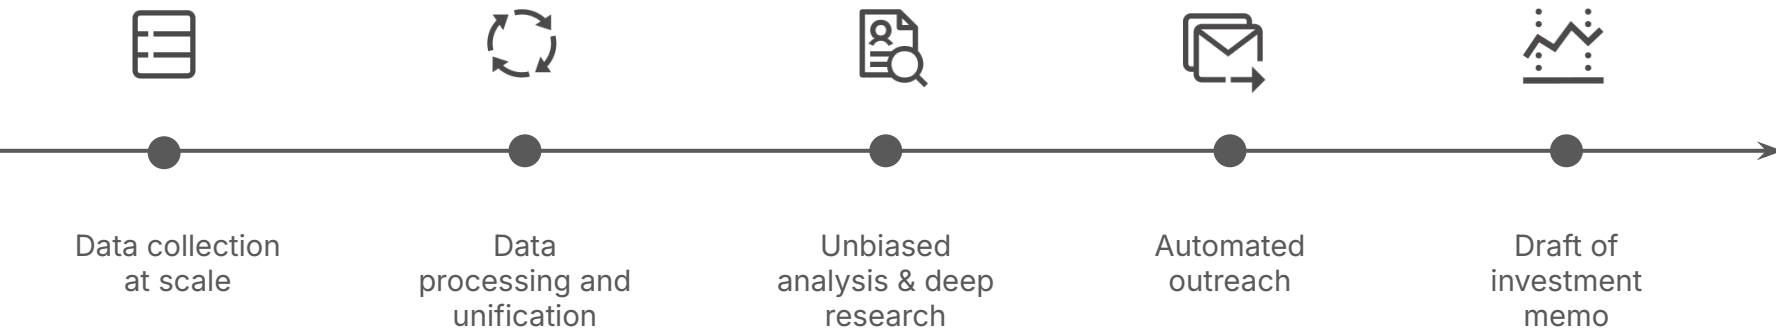

Airbnb recently completed our first large-scale, LLM-driven code migration, updating nearly 3.5K React component test files from Enzyme to use React Testing Library (RTL) instead. We'd originally estimated this would take 1.5 years of engineering time to do by hand, but — using a combination of frontier models and robust automation — we finished the entire migration in just 6 weeks.

This is what's already happening inside your org...even if you haven't noticed yet.

Employee Type	Time Spent Working	Output Produced	Who Wins?
 AI-Empowered Employee <i>(Leadership supports AI adoption)</i>	100%	 4X original work	 Employee and Organization
 AI-Secret Employee <i>(Using AI without leadership enablement)</i>	⚠️ 25%	⚠️ Same as before	 Only the Employee
 Traditional Employee <i>(No AI adoption, manual workflow)</i>	100%	⚠️ Same as before	 No one

Case study: VC firm transformation in 12+ weeks.

From fragmented and reactive to fully AI-enabled and insight-driven

Outcomes:

- Consolidate 6 tools into 1 system
- 10X growth in deal opportunities
- 90% less effort

Thank you.
