

Maximize savings with rebates on dynamic LED lighting

Unlock financial incentives for your greenhouse

Upgrading your greenhouse lighting system is a significant investment, but did you know that rebate programs across North America can help reduce costs?

Government and utility-based incentives exist to encourage energy-efficient measures, making it easier for growers to adopt cutting-edge lighting solutions like Sollum®'s dynamic LED lighting while maximizing profitability.

Rebates designed for you

Rebate programs across the U.S. can significantly reduce the cost of upgrading to dynamic LED lighting. Sollum's solution qualifies for multiple incentive programs, making it easier than ever to invest in future-proof technology.

- **Prescriptive incentives** – Fixed rebates per fixture, with savings that, in some cases, can cover up to 100%* of the cost through energy efficiency programs.
- **Custom incentives** – Additional rebates for advanced energy-efficient technology. With SUN as a Service® (SUNaaS®), growers may qualify for even greater savings* thanks to smart automation and energy optimization.

Don't leave money on the table — we'll guide you through the rebate process to help you secure every dollar you're entitled to. Contact us to confirm eligibility and maximize your savings.

*can vary depending on states and programs in place.

General eligibility criteria

Rebate programs may apply if:

- You operate an agricultural facility (greenhouse, vertical farm, or indoor cultivation site).
- Your facility produces cannabis, flowers, fruits, or vegetables.
- You may be eligible for rebates even if you have previously received subsidies, provided they were for a different project or expansion. However, some programs require a 4–5 years waiting period before reapplying for the same space. Eligibility varies by location.

We simplify the process

Applying for rebates can be complex, but the Sollum team is here to help. We provide **end-to-end support**, ensuring you maximize your eligible incentives:

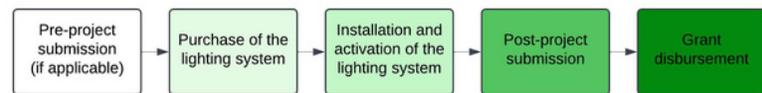

- **Personalized guidance:** a Sollum team member will assess available rebate options based on your region, project size, and lighting needs.
- **Application assistance:** we and our partners help you navigate the paperwork, ensuring you submit the required documentation for approval.
- **Seamless implementation:** from planning to installation, we ensure your project aligns with rebate requirements for maximum savings.

How it works: rebate process at a glance

Here's an overview of the rebate application journey:

1. Pre-project submission (if applicable for your state)
2. Purchase of dynamic LED lighting system
3. Installation and system activation
4. Post-project rebate submission
5. Grant disbursement (once approved)
