

MGTS Downing Fox 80% Equity Fund

Investment objective

The investment objective of the Fund is to achieve capital growth over the medium to long term (five years and over).

Portfolio basics

The Downing Fox investment process is centred around managing two separate components: ‘Growth’ and ‘Defence’. These are used as building blocks to construct funds that cater for different investor risk tolerances.

Our aim when managing the Growth component is to construct a portfolio that will generate good returns over the long run, capturing the gains made when stock markets rise. It consists of a carefully selected range of actively managed long-only equity funds and is diversified by manager, geography, market capitalisation, and investment style, with the aim of avoiding overly exposing holders’ capital to any one specific risk.

For the Defence component, we focus on maintaining a portfolio that will stand firm when equity markets are falling. This should make tougher conditions easier to bear for more risk-averse investors. It is a managed collection of developed-market cash and government bonds, and its main job is to act as a counterbalance to the Growth component, which is more likely to endure short-term falls when stock markets are selling off.

The MGTS Downing Fox 80% Equity Fund has 80% allocated to the Growth component and 20% to Defence. These levels are fixed to help us maintain consistent risk profiles, and to avoid errors caused by managers changing asset weightings in response to incorrect assessments of market, economic or geopolitical conditions. The two components will therefore be regularly rebalanced to stay in line with these fixed weightings.

Investment approach

Aim: To generate returns that are attractive given the level of risk taken

The Unhero’s Journey
Carefully selecting and blending active managers to create genuine diversification and smoother relative returns

Anti-Macro
Positioning the portfolio so that performance is not pinned on one unforecastable event happening over another
