For Airports

Unlocking capital efficiency and risk transparency for complex airport developments.

Airports are among the most capital-intensive and operationally complex infrastructure assets. With multiple stakeholders, long development cycles and strict regulatory environments, financial visibility and execution certainty are critical.

For:

- Airports
- Operators
- Airport asset managers
- Property managers
- Construction managers

We address:

- Fragmented multi-stakeholder airport project data
- Siloed financial and operational data
- Inefficient reporting across multiple sources
- Limited real-time visibility into costs
- Elevated delivery risk across programs

Our value for you:

- Real-time transparency across airport portfolios
- Automated reporting enabling faster alignment
- Early risk detection across programs
- Benchmark-driven insights for better decisions
- End-to-end oversight from planning delivery

Relevant Case Study

Frankfurt Airport

PROBIS is used by many international airports worldwide, including the renowned Fraport AG, Frankfurt, Germany to optimize financial reporting, cost control, and general financial management over all real estate assets.

One of the outstanding implementation of PROBIS is the extensive project of the southern expansion of Frankfurt Airport, which includes the construction of Terminal 3. This extensive project comprises 45 sub-projects with an impressive total volume of over €5 billion.

Since 2017, Fraport AG has relied on PROBIS as a central and binding reporting, demand notification- and cost control system for all projects. Thanks to its cloud-based architecture, PROBIS provides an up-to-date and timely overview of cost status and forecasts for all sub-projects, presented in clear dashboards. This functionality ensures transparent and efficient management of all financial measures.
