- Hospital Care
- Long Term Conditions
- Neurology
- Neurorehabilitation
- Non-Medical Prescriber
- Parkinsons
- Pressure Sores
- Progressive Neurological Diseases
- Tissue Viability
- Wound Care

Profile:

I am a registered Adult Nurse with 9 years' experience. In 2021 I gained my Advanced Clinical Practitioner qualification.

As an Advanced Clinical Practitioner, my responsibilities include but are not limited to physically examining patients, diagnosis, assessment, treatment, arranging referrals, prescribing medication, ordering and interpreting test results.

I work as an independent practitioner in both inpatient and community settings.

Since 2018 I began working as a Clinical Nurse Specialist focusing on Neurology. I am now Lead Nurse managing a caseload of community patients who have a diagnosis of Parkinson's or related disorder. My role extends to covering any emergency admissions and patients when they are admitted to the hospital for acute or planned reasons.

My post qualification experience involves community experience including management of pressure ulcers, tissue viability, catheterisation, falls and general nursing. More recently with my ongoing development I have expanded into neurological conditions and non-medical prescribing.

Maggie Sargent & Associates

Prior to qualifying as a nurse, I worked as a nursing assistant /care assistant for 4 years responsible for the care of patients within a nursing home setting. More recently, over the COVID pandemic I assisted within a nursing home by working agency shifts. This further added to my understanding of falls, fragility and tissue viability.

I understand my duties as an expert witness and have undertaken expert witness training.
