A2J Tech and Lexopulus Collaborate to Expand Affordable Case Management Options for Legal Aid Organizations

DENVER, CO (Jan. 13, 2026) — [A2J Tech PBC](#) announced its collaboration with [Lexopulus](#), a cloud-based suite of tools offering modern software designed specifically for legal services organizations. The partnership reflects a shared commitment to addressing the real operational constraints facing legal aid teams and improving access to justice through practical, mission-aligned technology.

Legal aid and nonprofit organizations often operate with limited budgets, small teams, and complex service demands. Many rely on spreadsheets or fragmented systems because traditional case management software is too costly or difficult to maintain. Through close collaboration, A2J Tech worked with Lexopulus to ensure its tools reflect the day-to-day realities of legal aid work.

"Working with Lexopulus has been about sharing real knowledge from the legal operations field," said Mauricio Duarte, COO & Justice Entrepreneur at A2J Tech.

"Legal aid and nonprofit teams face daily limits that most software never considers. Many still rely on Excel because their limited budgets leave no room for traditional case management software. By working closely together, we helped Lexopulus understand those constraints and enable them to design a system that fits the reality of legal aid work. The result is a case management system built for organizations that need something practical, affordable, and focused on their mission."

Lexopulus offers a secure, cloud-based platform that integrates intake and case management into a single system. Its tools are designed to help organizations serve more clients without increasing staff or costs. The platform's intake tool streamlines how organizations collect and manage client information, while its new case management tool allows teams to organize cases, contacts, documents, and time entries in a single, shared system.

"When we first started working with legal aid organizations, we saw incredible dedication paired with expensive tools that made the work harder than it needed to be," said Dave Turner, Co-Founder of Lexopulus. "Lexopulus Case Management was built for one reason: to help legal aid organizations serve more people while reducing complexity and cost. We're proud to support the organizations that make access to justice possible every day."

Lexopulus's Case Management tool provides teams with visibility into every case through timelines, activity logs, and case summaries, ensuring that all staff work from a single, reliable source of information. The platform uses encryption and secure cloud infrastructure to protect client data and integrates with commonly used tools such as Google Drive and SharePoint. Organizations can also scale their services by adding users or practice areas without requiring new systems or complex reconfiguration.

This collaboration underscores A2J Tech's ongoing commitment to supporting technology solutions that are accessible, sustainable, and aligned with the needs of legal aid and nonprofit organizations working to close the justice gap.
