

Contain the breach.

**Breaches are inevitable.
Disasters are optional.**

The cloud, hybrid IT, and GenAI are reshaping the IT landscape. They're also expanding your attack surface and increasing your cyber risk.

Unfortunately, conventional security tools are falling behind.

Firewalls, EDRs, and SIEMs may promise to keep you secure. But they give only surface-level visibility into critical traffic flows — and even less control over threats that spread through these pathways. Truth is, these tools were built for an earlier era of threats.

Rather than trying — and failing — to prevent every cyberattack, organizations should prioritize reducing the impact of inevitable breaches through effective containment.

Illumio is the world's first and leading breach containment platform built on an AI security graph. It offers simplicity and security to help create a world without cyber disasters.

Illumio Insights and Illumio Segmentation are core components of the Illumio breach containment platform. Insights identifies risks, detects attacks, and enables one-click containment. Segmentation proactively enforces security policies to prevent lateral movement.

Illumio is the Leader and Customer Favorite in Microsegmentation

Protecting millions of workloads for organizations globally, from the Fortune 100 to small businesses

servicenow

ORACLE®

Morgan Stanley

BNP PARIBAS

CATHAY PACIFIC

By blocking and eliminating server-to-server threats, Illumio will reduce our attack surface by at least 80%.

Master

The alternative route for our initiative was installing tens of data center firewalls, amounting to an estimated \$5M.

CATHAY PACIFIC

Illumio has allowed us to safely and efficiently execute our plans with zero application downtime or user impact.

BROOKS

Illumio stood out from the crowd with its speed and ease. We were able to get it up and running in less than half an hour. Instantly, we could see our traffic and set up policies to protect our network.

Hi Temp Insulation Inc.

The only platform built for breach containment

Illumio is the leader in ransomware and breach containment. We're redefining how organizations contain cyberattacks and enable operational resilience. Built on an AI security graph and enabling Zero Trust, our breach containment platform identifies and contains threats across hybrid, multi-cloud environments — stopping the spread of attacks before they become disasters.

See your risk

Visualize all communication and traffic between workloads and devices across the entire hybrid attack surface.

Control your environment

Gain continuous insight into how your environment behaves with AI-driven detection and observability. Enforce segmentation policies that automatically adapt to your changing environment.

Stop the spread

Automatically isolate compromised systems and high-value assets instantly to stop the spread of an active attack.

ILLUMIO PRODUCTS

Illumio Insights

AI cloud detection and response (CDR) that observes and protects every workload and resource across hybrid, multi-cloud environments.

Illumio Segmentation

Proactive microsegmentation to prevent lateral movement and protect critical assets, enhancing cyber resilience in the cloud, data centers, and endpoints.
