

Precision cost modelling

Bottom-up should-cost models for parts, assemblies and systems.

Gap analysis

Compare should-cost vs. supplier quote, expose inflated assumptions and hidden margins.

Negotiation power

Fact packs that drive 10-20% savings without burning supplier trust.

Capability uplift

Transfer tools and methods help procurement teams to learn quickly and reuse the approach.

working together
for optimal results

based on the reliable and accurate database with information on global industries and the calculation software from **costdata**®

and **DVC Solutions**' experience of 15 years in cost and value management with over 100 global projects delivered, a comprehensive methodology and proven results.

Together we support European companies to get best cost transparency, significant savings and valuable strategic cost insights for being competitive at a maximum.

Data

- Reliable database
- Regularly updated
- Comprehensive information on global industries
- Labor cost data
- Raw material data
- Machine data
- Overhead cost structures

Software

- For all industries and requirements
- Full cost calculation with machine hourly rate
- Precise modules
- Detailed reporting
- Quick and easy installation

Consulting

- Transparent product cost calculation
- Analysis of each cost component
- Cost optimization
- Teardown analyses
- Workshops and training
