with base, 27 cm

Svendsen 1 and Svendsen 2

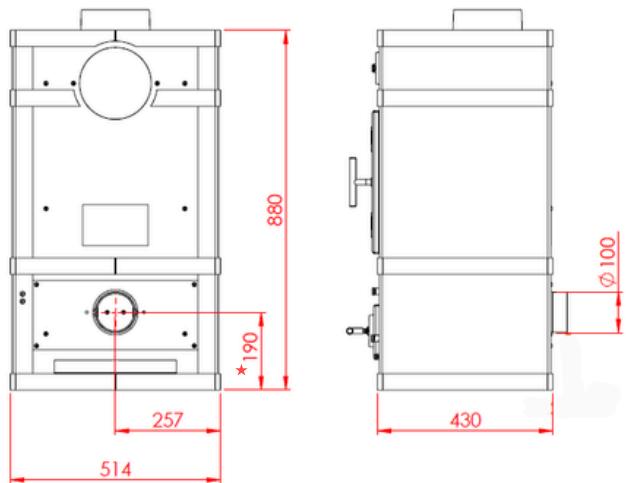

with airbox (fresh air system)

The advantage of an airbox is that it always ensures optimal oxygen supply to the wood-burning stove. The airbox is recommended for new builds or recently renovated homes, where low indoor oxygen levels can cause combustion issues.

The airbox flow is adjusted using the control lever located to the right of the ash door.

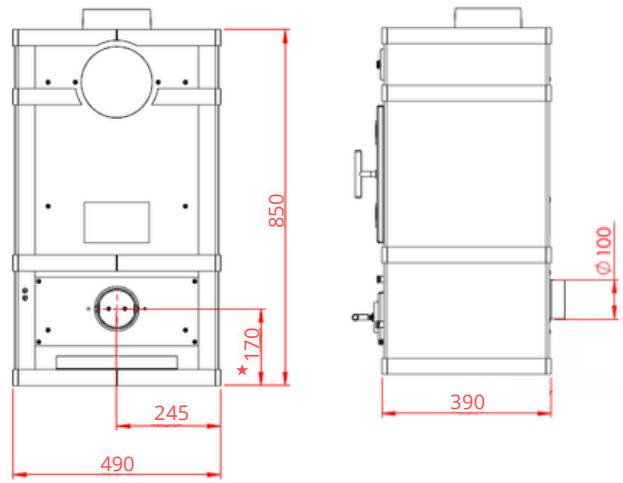

Please note: the airbox must be ordered with the stove - it cannot be retrofitted.

Svendsen 1

* without base: 190 mm
 14 cm base: 330 mm
 27 cm base: 460 mm

Svendsen 2

* without base: 170 mm
 14 cm base: 310 mm
 27 cm base: 440 mm
