

eSHARE Connector for Microsoft Power Automate

The eSHARE Connector for Power Automate creates a Trusted Collaboration Fabric that weaves compliance into manual, automated, and agentic workflows.

Weave Secure Collaboration Into Workflow Automation

The eSHARE Connector for Power Automate creates a secure workspace for external collaborations inside your M365 tenant without guest accounts, audit gaps, or loss of control.

Capabilities and Value

eSHARE's integration with Power Automate delivers an embedded Trusted Collaboration Fabric that ensures automated compliance within manual, automated, and agentic workflows:

Secure Data Containment:

Power Automate flows use the eSHARE Connector to provision secure, link-based shares, ensuring sensitive files are never duplicated or sent as risky email attachments.

Value:

Eliminate data sprawl and loss of control, allowing organizations to confidently automate and isolate high-risk external workflows within their tenant.

Agentic AI Integration:

Creates a governance check embedded in agentic workflows that assures continuous oversight and automated compliance for agent-to-customer/partner/agent data sharing.

Value:

Accelerate the adoption of AI-enabled collaboration with precise logging and built-in policy enforcement that infuses accountability and trust into automated processes.

Native Workflow:

Turn any Power Automate trigger into a secure collaboration event. Sensitive files become governed shares automatically—no attachments, no data sprawl, no extra steps.

Value:

Power Automate flows use the eSHARE Connector to provision secure, link-based shares, ensuring sensitive files are never duplicated or sent as risky email attachments.

End-to-End Observability:

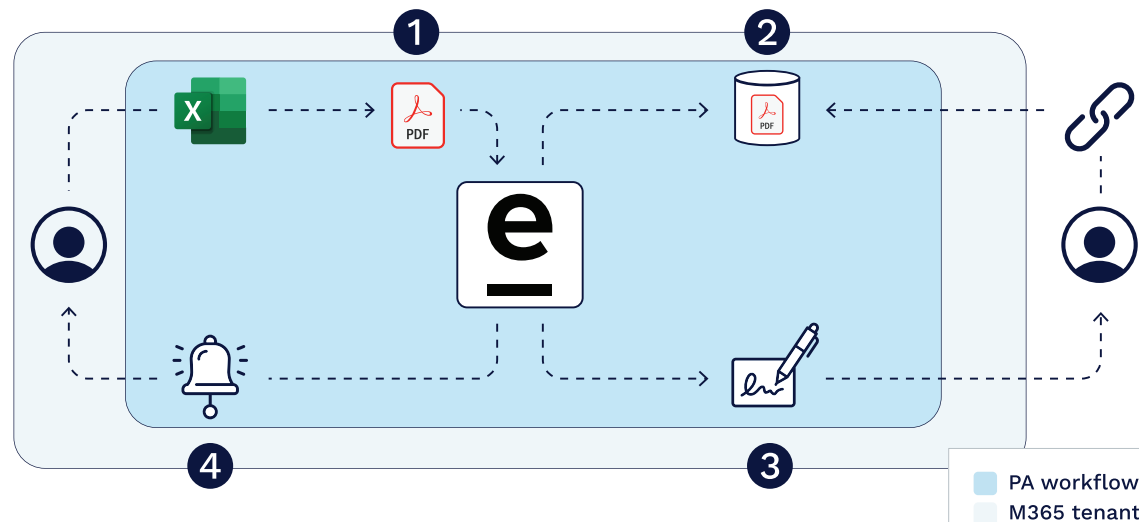

Complete audit trail across Power Automate and eSHARE. Prove compliance instantly, satisfy auditors effortlessly

Value:

Continuous oversight provides instant proof of compliance with regulations like GDPR or HIPAA that builds essential stakeholder trust and makes audits painless.

Use Case in Action: Automating a Secure Loan Application

Workflow within Power Automate

Trigger: New client entry initiates the workflow

A loan officer adds a new client's name and email to an Excel sheet which triggers a Power Automate workflow that starts the loan application process.

1

Secure: Trusted Share created automatically in tenant, no file duplication

Power Automate calls the eSHARE Connector to instantly create a Trusted Share for the loan application PDF within SharePoint.

2

Collaborate: Client accesses and edits via secure link, data never leaves your control

The eSHARE Connector emails the client a secure link to access and sign the PDF in the Trusted Share. The customer modifies the PDF without it ever leaving the bank's tenant.

3

4

Complete: Automated notification closes the loop

When the client saves the application, the eSHARE Connector triggers an email alerting the loan officer or AI agent that the document is ready for review.

Conclusion

The eSHARE Connector for Power Automate resolves the conflict between automation-driven agility and data-centric security. By enabling the seamless creation of Trusted Shares within automated M365 workflows, the eSHARE Connector empowers enterprises to eliminate compliance risks and accelerate business with confidence. The result are fully automated, end-to-end processes that realize the full value of secure, Trusted Collaboration in the agentic era with 100% compliance.
