

eSHARE Collaboration Attack Surface Assessment

See and Control What Data Leaves Your Organization

The Challenge: The Invisible Attack Surface

For years, organizations have invested heavily in securing data within the perimeter, across endpoints, networks, cloud infrastructure, and applications. Yet sanctioned external sharing through email has grown largely unmonitored, creating a collaboration attack surface that expands with every attachment sent.

The Solution: Comprehensive Attack Surface Visibility

eSHARE's Collaboration Attack Surface Report provides the first comprehensive view of your email-based data exposure, delivering actionable insights that drive both risk reduction and improved collaboration efficiency.

Run the Email Scan

With read only permissions, eSHARE will collect email audit events for the previous 10 days in your M365 tenant

1

Analyze Risk Insights

The report helps you understand your current attack surface and overall exposure across multiple critical dimensions

2

Identify Remediations

eSHARE will help identify opportunities to reduce the email attack surface while delivering an improved collaboration experience

3

Executive Summary

At the end of the assessment, eSHARE will provide a summary to be shared with stakeholders for analysis of next steps

4

Quantify Your Attack Surface

eSHARE's Collaboration Attack Surface Score measures the average number of file copies created per external recipient, a single metric that captures the compounding nature of email-based data exposure.

Score Range	What It Means
< 1.0	Controlled External Sharing
1.0 - 2.0	Moderate Exposure
> 2.0	Significant Data Loss

What You Recieve

Collaboration Attack Surface Score

1.25

Attack Surface Score
Quantified measurement of your data proliferation risks

Executive Dashboard
Metrics which establish scale and scope of your external sharing activity

Remediation Roadmap
Actionable recommendations for policy-based controls

Data Analysis
Detailed breakdowns across share types, labels, and domains

Email Details
Drill-down capabilities to investigate specific communications

Expert Consultation
Guided walkthrough to interpret findings and develop remediations

Ready to See Your Collaboration Attack Surface?

Schedule a consultation to discuss how eSHARE's Collaboration Attack Surface Assessment can help your organization reduce risk while improving collaboration efficiency.
