

Trusted Sharing for Teams Chat

eSHARE Trusted Sharing for Teams Chat extends the Trusted Collaboration Fabric directly into Microsoft Teams Chats and meetings, enabling users to share files with external participants while ensuring secure, governed access without ever leaving your workflow.

Key Benefits

Collaboration Within Teams

Users no longer need to switch to email to share files securely with external partners. All content and discussion remain in the Teams chat or meeting, improving productivity and preserving full conversation context.

Secure Access Externally

Trusted Shares ensure that external users can access content securely without guest accounts, risky “Anyone” links, or custom permissions. All access follows the organization’s Access Link policy.

Full Visibility & Governance

Organizations retain centralized visibility and control over external file sharing activity, eliminating blind spots created by out-of-band sharing through email.

How It Works

1. Paste an M365 Link

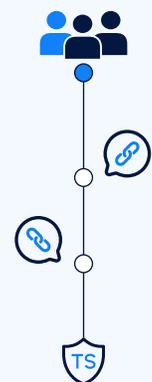

User drops a SharePoint or OneDrive link into a Teams chat or meeting that includes external participants, eSHARE detects the link immediately.

2. Automatic Trusted Share Creation

Once the message is sent, eSHARE creates a Trusted Share and generates secure access links for all chat members using Access Link policies.

3. Ongoing Share Management

Any new M365 link pasted later in the same chat is automatically added to the existing Trusted Share.

Ready to Bring Secure External Sharing Into Teams?

eSHARE Trusted Sharing for Teams brings governance and external sharing into perfect alignment, ensuring that every file shared in Teams is automatically secured, auditable, and accessible to the right participants. The result is consistent, compliant external collaboration in Teams, powered by Trusted Sharing and enforced with zero user friction.

About eSHARE

eSHARE enables secure, seamless collaboration across today’s digital workplace, ensuring every external interaction is protected, visible, and controlled.
