

# Trusted Collaboration for Microsoft 365

eSHARE

Share without sending. Collaborate without copying.  
Data that stays put stays safe.

## The Problem

Three forces are converging and traditional security tools weren't built for any of them.

### Gen AI

Models are consuming and exposing unstructured data faster than policies can adapt, with no awareness of context.

### Collaboration

External sharing across email, Teams, and SharePoint is the default, not the exception.

### Compliance

CMMC, HIPAA, GLBA, GxP, ITAR, and AI governance frameworks demand demonstrable control across every sharing channel.

Organizations are stuck between two failing approaches:

### Lock Down External Sharing

Drives shadow IT, email workarounds, and ungoverned third-party tools. Blocks productivity and prevents safe AI agent collaboration.

OR

### Use Guest Accounts by Default

Guest accounts expand the attack surface, create governance blind spots, and make compliance unenforceable.

**The Result:** Multi-terabytes shared externally every month. No ability to quantify who has what, or whether it's regulated or sensitive. No ability to revoke during an incident. DLP, DSPM, and SSPM tools can discover risk, but can't enforce at the point of sharing.

## What eSHARE Does

### Governed, Revocable Trusted Shares

BYOI-authenticated access & omni-channel control.

### Complete Observability

Across every share and every channel.

### Data Stays in Your Tenant

No extraction, downloads, or permanent attachments.

### ABAC on Every Access

Policies re-evaluate continuously.

## The Impact

90%+

Reduction in external data exposure

Retire

Redundant sharing and file exchange tools

Unblocked

Recipients can access your portal anywhere

Safe AI

Govern access to sensitive data

## Who Trusts eSHARE

eSHARE is trusted by some of the world's largest and most highly regulated organizations. It is used across 200+ countries and enables collaboration between 20,000+ different organizations.

- > A top-5 U.S. health insurer
- > One of the largest global investment managers
- > A top-10 global pharmaceutical company
- > A Fortune 50 energy company
- > A leading aerospace & defense prime contractor
- > A major professional sports league

## Certifications

SOC 2 Type II Attestation

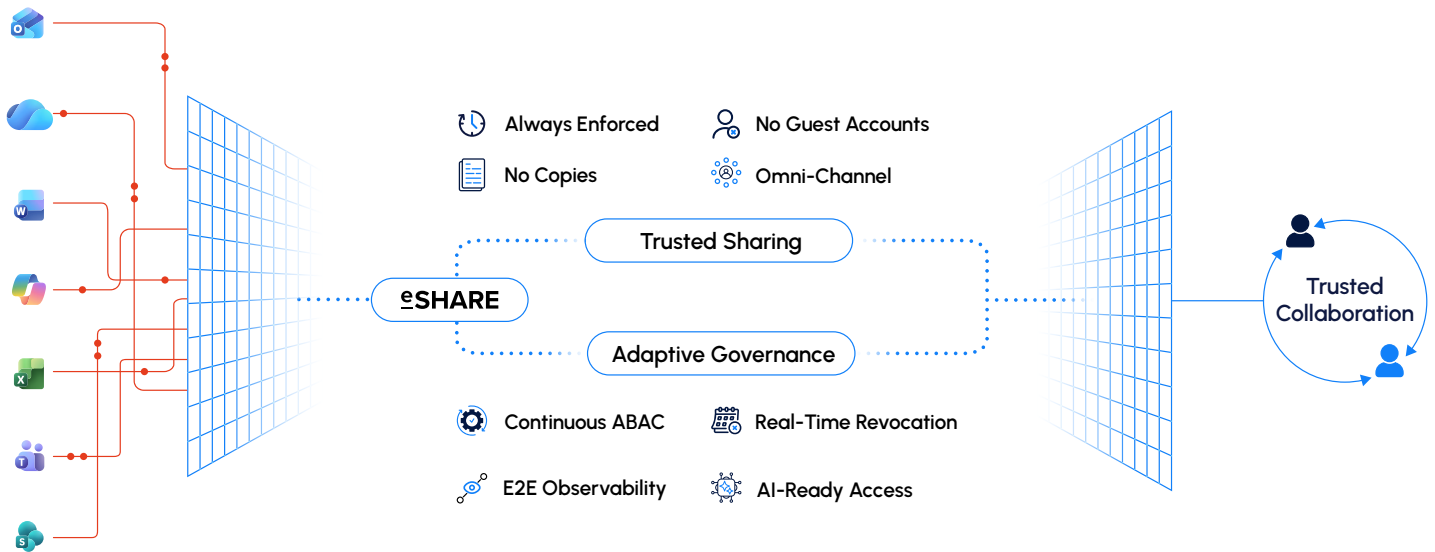

FedRAMP

ISO/IEC 27001 Certification

## Accelerate Trusted Collaboration

The fastest path to value is a two week, read-only posture and risk assessment across your M365 environment; no disruption, no configuration changes. eSHARE quantifies the exposure, identifies high-impact use cases, and demonstrates measurable impact before you scale.

## Start a Conversation

Discover how eSHARE extends Microsoft Sensitivity Labels with structured security attributes and metadata that make compliance-driven workflows enforceable from the start. eSHARE can quantify exposure, identify high-impact use cases, and demonstrate measurable impact with our two-week, read only posture and risk assessment of your M365 environment.
