

# **FIREVIEW<sup>TM</sup> 5**

## REMOTE WELD MONITORING SOFTWARE

FireView™ is an advanced weld monitoring software. It is designed to be an intuitive and efficient HMI with all pertinent process information displayed and controlled from a single touchscreen. FireView runs on GTView and GTView Light hardware platforms that provide a direct, digital link to the GT VII and GT400 weld controllers.

Remote welding control

Configurable screen design

Multi monitor display

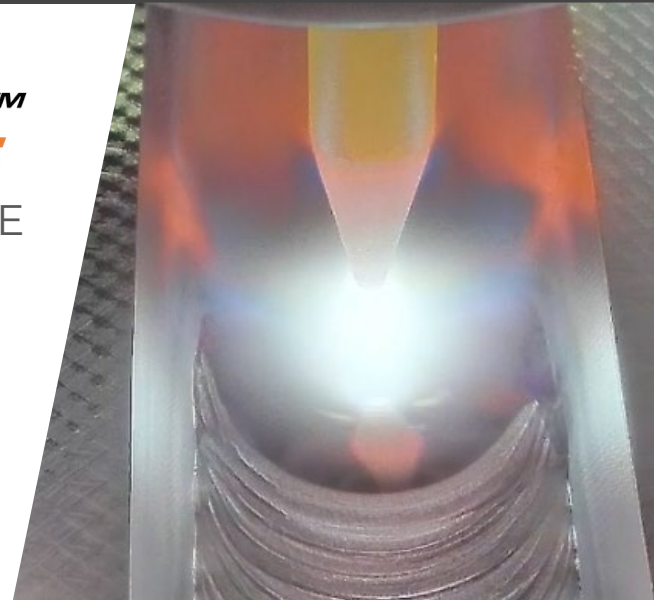

Graphical weld programming

Touch screen controls

Data log viewer

### ■ Standard features

- Keyboard shortcuts
- Up to 4 camera inputs
- Real-time parameter and steering overrides
- Printable data logs
- LED intensity control
- Multi monitor support with display configuration

### ■ Security features

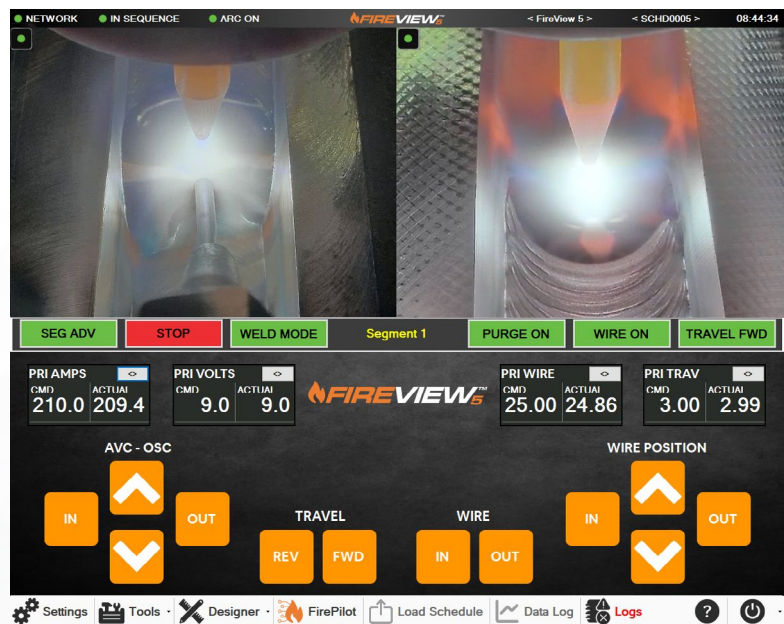

- Multiple user accounts
- Customized permission levels
- Password protection
- Parameter override limits

### ■ Options

- Screen Designer
- FirePilot

### ■ Weld video monitoring

- AVI recording
- Full screen video image mode
- Automatic video recording on arc start
- Digital weld shades
- On screen cross-hairs

## 

FireView SA is a standalone weld viewing software. It runs independent of the weld controller, allowing seamless third party integration. FireView SA can be installed on GTView and GTView Light hardware platforms.

### ■ Weld video monitoring
