

## Euronyl® NOW Euronox® NOW

### UNIVERSAL TINTING SYSTEM FOR 2C FLOOR COATINGS

Pigment preparations based on a neutral carrier system or the binder chemistry of one of the coating components, such as a polyol or epoxy resin, are often used for tinting 2C paints and coatings. This allows for the various 2C-Systems to be easily and effectively tinted in different colours. Huge drawback with this approach is however that for each system one needs a different colourant range.

With our Euronyl/Euronox NOW pigment preparations, this is now a thing of the past. This new development allows the most important 100% floor coatings to be tinted equally – from 2C epoxy and 2C PU to polyaspartic systems. In addition, NOW pigment preparations are also very well suited for tinting water-based emulsion and facade paints.

The liquid carrier material of the pigment preparations contains reactive groups that enable permanent integration into the reactive coating systems. Euronyl/Euronox NOW pigment preparations are label-free and free of bisphenols.

Euronyl/Euronox NOW pigment preparations are not only easy and clean to dose using conventional POS dosing systems, but also offer significant advantages due to the absence of water and/or solvents: no microbial contamination and no drying on the nozzles.

#### ADVANTAGES

No labeling required, no biocides,  
VOC < 1.000 ppm

Universally compatible with a wide range of  
common floor coatings

Easy to use in conventional POS dispensing  
systems

Reactivity in 2C systems

Support with your colourimetry

*"Let's work together to build the perfect  
tinting system for your 2C floor coatings."*
