

Euronyl® NOW
Euronox® NOW

UNIVERSAL TINTING SYSTEM FOR 2C FLOOR COATINGS

Pigment preparations based on a neutral carrier system or on the binder chemistry of one of the coating's components – such as a polyol or epoxy resin – are frequently used for tinting two-component coatings. This makes it easy to tint the various two-component systems to different shades, but a separate preparation is required for each system.

With our Euronyl/Euronox NOW pigment preparations, this is now a thing of the past. This new development allows the most important 100% floor coatings to be tinted in the same way – from 2C epoxy and 2C PU right through to polyaspartic systems.

The Euronyl/Euronox NOW pigment preparations require no labelling and are free from bisphenols.

Our Euronyl/Euronox NOW colourants are perfectly suitable to be used in conventional POS-dispensers. As our NOW pigment preparations are water-free there is no tendency to dry at the nozzles and although completely biocide-free they represent an excellent stability against microbial growth.

ADVANTAGES

- No labelling required, no biocides, VOC < 1,000 ppm
- Universally compatible with a wide range of standard floor finishes
- Our 1 liter Paint Pusher pack size, which is 100% recyclable, was developed to secure an easy and clean filling of the canisters in your POS-dispenser.
- Bisphenol-free
- Support with your colourimetry

"Let's work together to develop the perfect tinting system for your two-component floor coatings."
