

Spectrum Rugged Receiver

Hardware Version 5.0.1

NOTICE

This document contains the technical specifications and operating instructions for the Spectrum Rugged Receiver. Please review it carefully before using the device.

Nordian is committed to providing state-of-the-art products to our customers.

DISCLAIMER

This document and all information contained herein are the property of Nordian Inc. Reproduction of this document as a whole or in part is prohibited.

As this document is continuously updated, its contents may change without prior notice. Please ensure that you are always referring to the latest version.

This manual is intended to present the general installation and application guide for Spectrum usage. For detailed information on the device configuration, please refer to the Interface Manual.

Visit www.nordian.com for more information.

1. Introduction

1.1. Spectrum

Spectrum is a high-precision rugged receiver. Designed for reliable geopositioning in daily applications, it offers fast setup, user-friendly configuration and compatibility across platforms. Spectrum combines broad satellite signal support with an integrated IMU-based correction system to deliver accurate position, speed, altitude and timing for industrial applications.

1.2. Features Overview

- Full GNSS compatibility: GPS, GLONASS, BeiDou, Galileo, NavIC, QZSS, SBAS (including WAAS, EGNOS, GAGAN, MSAS, BDSBAS) and all-band L1, L2, L5 and L6.
- GNSS Signal Compatibility:
 - GPS: L1C/A, L2C, L5
 - GLONASS: L1OF, L2OF
 - Galileo: E1B/C, E5b, E6
 - BeiDou: B1I, B1C, B2a, B3I
 - QZSS: L1C/A, L1C/B, L2C, L5, L6
 - SBAS: WAAS, EGNOS, GAGAN, MSAS, BDSBAS
- Maximum Update Rate:
 - GNSS: 25 Hz
 - GNSS + IMU Sensor Fusion: 50 Hz
- Fast convergence time:
 - Cold start: 24s; Aided start: 2s; Reacquisition: 2s;
- Embedded high-grade IMU:
 - 6-axis;
 - Accelerometer range: 16 g;
 - Gyroscope full-range 2kdps;
- GNSS+IMU sensor fusion;
- Reduced start-stop delays;

- Anti-interference and scintillation algorithms;
- Terrain compensation;
- User Interfaces
 - Three (3) Serial UART COM ports;
 - One (1) CAN port;
 - Pulse Per Second (PPS) output;
 - Ground Speed Output (GSO/Radar) output;
 - Two (2) status LED indicators;
- Base and Rover features with RTK corrections generation
- Connectivity:
 - Cellular 5G/4G fallback;
 - Ethernet

2. Technical Specifications

2.1. Electrical

Please see below the specified working voltage range. Applying voltage outside the specified range may result in permanent device damage.

Table 1: Electrical Requirements

Specification	Value
Voltage	+7 to +32 VDC
Average Current	425 mA
Average Power	1.5 W

2.2. Accuracy

Table 2: Accuracy Level

Accuracy	Standalone	P1 Soft-Intelligence	P2 Soft-Intelligence
Horizontal Accuracy (RMS)*	1.2 m	0.40 m	0.03 m

Pass-to-Pass Accuracy	0.20 m	0.10 m	0.02 m
------------------------------	--------	--------	--------

**Horizontal accuracy may vary based on satellites in view, clear sky and multipath.*

2.3. GNSS Specifications

Table 3: Spectrum Supported GNSS signals

Supported GNSS signals	
GPS	L1C/A, L2C, L5
GLO	L10F, L20F
GAL	E1B/C, E5a, E5b, E6
BDS	B1I, B1C, B2, B2a, B3I
QZSS	L1C/A, L1C/B, L2C, L5
SBAS	WAAS, EGNOS, GAGAN, MSAS, BDSBAS

Table 4: Time and Acquisition

Time and Acquisition	
Convergence Time	< 30 s
Acquisition: Cold start	24 s
Acquisition: Aided start	2 s

2.4. IMU Sensors

A high-end embedded Inertial Measurement Unit (IMU) is an integral part of the product's positioning calibration. The IMU operates continuously alongside the GNSS system.

The IMU has the following features:

- 6-axes
- Accelerometer full range: $\pm 16g$
- Gyroscope full range: ± 2000 degrees per second

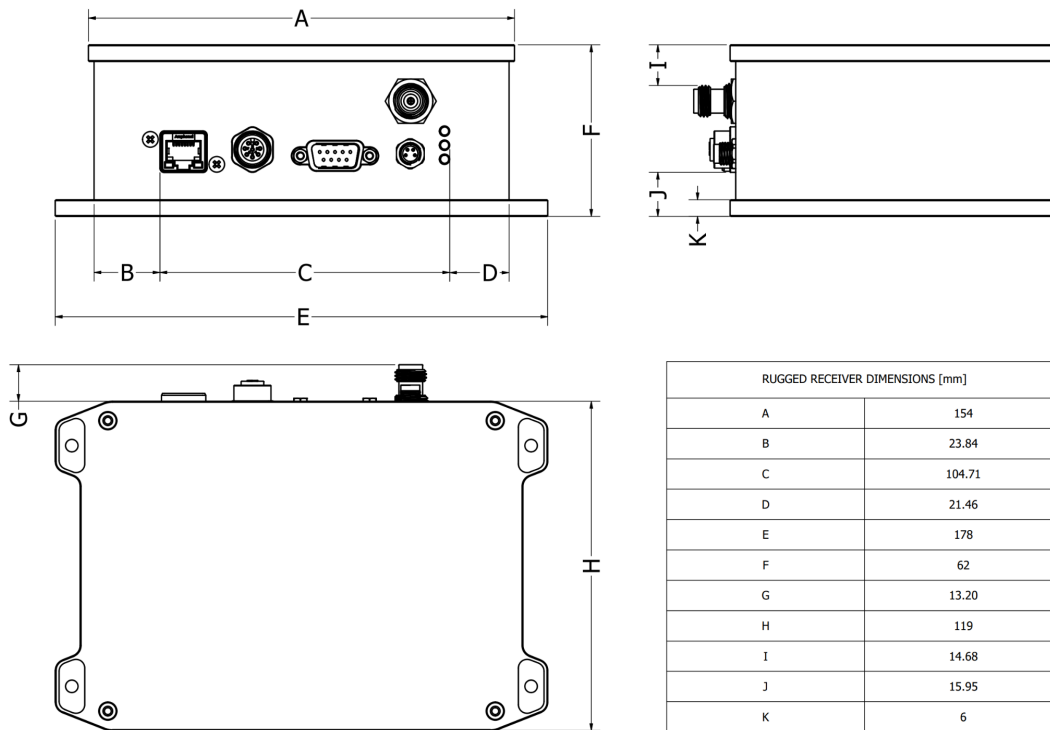

2.5. Mechanical

This section presents the general mechanical characteristics and specifications.

Table 5: Spectrum Mechanical Specs

Mechanical Specifications	
Size	178 x 119 x 59 mm (7.01 x 4.69 x 2.32 in)
Weight	1,300 g (2.87 lb)
Operating Temperature	-40°C to 85°C (-40°F to 185°F)
IP Rating	IP67

Figure 1: Spectrum Dimensions (mm)

The Rugged Receiver features five (5) connectors, detailed in the tables below.

Table 6: Spectrum Connectors Description

Connectors	
Connector 1	GNSS Antenna TNC Part Number: CBA-TNCF-MCXM
Connector 2	Serial DB9 9 Position D-Sub, Male Pins Part Number: 629-W09-240-015
Connector 3	Power Connector 4 Position Circular Connector, Male Pins Part Number: 839-54-00272-ND
Connector 4	I/Os M12 Female-8 Pins Part Number: MSAS-08PFFR-SF7003
Connector 5	RJ45 Ethernet

Table 7: Spectrum Pinout*

Pin Number	Connector 1 (GNSS Antenna)	Connector 2 (Serial)	Connector 3 (Power)	Connector 4 (Communication)	Connector 5 (Ethernet)
1	-	-	+VCC	CAN High	-
2	-	Serial 1 RX	GND	CAN Low	-
3	-	Serial 1 TX	Serial 2 TX	GSO	-
4	-	-	Serial 2 RX	PPS	-
5	-	GND	-	Serial 3 TX	-
6	-	-	-	Serial 3 RX	-
7	-	-	-	-	-
8	-	-	-	GND	-
9	-	-	-	-	-

2.6. Communication

Spectrum Rugged Receiver has three (3) serial communication ports, as well as one CAN FD port.

2.6.1. RS-232 Serial Port

- Spectrum configuration is possible through serial communication on COM1, COM2, or COM3, with each port configurable independently.
- Available baud rates (kbps) are: 9600, 19200, 38400, 57600, 115200, 230400, and 460800.
The default settings are: no parity bit, 1 stop bit, 8 data bits, no handshaking, and 115200 kbps.
- For message configuration details, please refer to the Nordian Interface Manual: <https://www.nordian.com/docs/rugged-receiver>

2.6.2. CAN FD Port

The device provides one (1) Controller Area Network (CAN FD) bus.

Available bitrates (kbps) are: 125, 250, 500, 1000, and 2000.

- CAN bus version: CAN 2.0B (extended).
- Maximum CAN FD port speed: 8 Mbps.
- J1939 protocol messages are transmitted exclusively over the CAN bus.

For message configuration details, please refer to the Nordian Interface Manual:

<https://www.nordian.com/docs/rugged-receiver>

2.6.3. PPS (Pulse per Second)

Pulse Per Second (PPS), is an output signal that generates pulses synchronized with the satellites internal precision clock. It's a useful tool for precision timing.

PPS varies digitally from GND to 3V3. The pulse edge is synchronized with the satellites clock, it can be configured for rising or falling edge synchronization. Other than that, the pulse duty cycle and period can be configured.

- NOTE: All configurations regarding PPS must be done through serial communication.

2.6.4. GSO (Ground Speed Output)

Ground Speed Output (GSO), also known as Radar, is an output signal whose frequency varies according to product speed with respect to the ground.

When idle the GSO output is stable at GND level. Once the speed has passed the configurable speed threshold GSO output will vary digitally from GND to +VBAT level with frequency proportional to PRECISIO's speed. The number of transitions per meter (from the GND to the +VBAT values) can be configured.

- NOTE: Configurations regarding Ground Speed Output (GSO) must be done through serial communication;

2.6.5. Ethernet

Ethernet Port with NTRIP Capability provides a high-speed network interface for real-time correction data streaming.

When connected, the Ethernet port enables seamless communication with NTRIP casters to receive RTCM correction messages, improving positioning accuracy.

The Ethernet interface supports standard network configurations and protocols to ensure reliable data transmission.

NOTE: Configuration of the Ethernet port and NTRIP settings must be performed via the serial communication interface.

2.7. Communication Protocols

2.7.1. NMEA 0183 (Serial Port)

Protocol compatible with serial communication. NMEA0183 available output messages are shown in the table below:

Table 8: NMEA 0183 Available Messages

Message	Description
DTM	Datum reference information
GGA	Time, position and fix related data
GLL	Latitude, longitude, time of position fix and status
GRS	Manages GNSS signal data, transmission timing, and system/signal IDs.

GSA	GPS DOP and active satellites
GST	UTC time, RMS value of pseudorange residuals and error ellipse
GSV	Satellites in view related data
HDT	Vessel Heading
RMC	Position, velocity and time
VTG	Course over ground and speed over ground related data
ZDA	UTC time related data

2.7.2. NMEA 2000 (CAN FD Port)

Protocol compatible with CAN bus communication. NMEA2000 available output messages are shown below:

Table 9: NMEA 2000 Available Messages

Message	Description
PGN126992	System Time
PGN127250	Vessel Heading
PGN127251	Rate of Turn
PGN127257	Attitude (pitch, roll, yaw)
PGN128001	Speed (through water)
PGN129025	GNSS position, rapid update
PGN129026	Course over ground and speed over ground, rapid upgrade
PGN129027	Position delta high precision rapid update
PGN129028	Altitude delta, rapid Update
PGN129029	GNSS position data
PGN129539	GNSS dilution of precision
PGN129540	GNSS satellites in view
PGN129542	GNSS Pseudorange Noise Statistics
PGN130312	Temperature
PGN130578	Longitudinal, transverse and stern speed

2.7.3. J1939 Protocol (CAN FD Port)

Table 10: J1939 Available Messages

Message	Description
PGN65254	Time and Date
PGN65256	Vehicle speed and direction
PGN65267	Vehicle position

2.8. Diagnostics

Spectrum features three (3) LEDs for status indication. Each blinking pattern corresponds to a specific status, as shown in the table below:

- LED 01: green, LED 02: yellow, LED 03: red.

Figure 2: Rugged Receiver Status LEDs Indication

Table 11: LEDs Status Indication

Category	Device Status	LED 01- Green	LED 02 - Yellow	Description & Recommended Action
Update	Update in Progress	1 blink / 1s pause	Solid ON	Description: The device firmware is currently being updated. Action: Wait for the update process to complete. Do not power off the device.
	Update Error	2 blinks / 1s pause	Solid ON	Description: An error occurred during the update procedure. Action: Retry the firmware update.
	Previous Update Error	3 blinks / 1s pause	Solid ON	Description: An unresolved error from a previous update persists. Action: Retry the firmware update.

Category	Device Status	LED 01- Green	LED 02 - Yellow	Description & Recommended Action
Firmware	Firmware Fault	4 blinks / 1s pause	Solid ON	<p>Description: A non-valid firmware image has been detected.</p> <p>Action: Load a valid firmware version onto the device.</p>
	Firmware Rollback	5 blinks / 1s pause	Solid ON	<p>Description: The device has reverted to the last known functional firmware.</p> <p>Action: A firmware update is recommended to restore full functionality.</p>
Hardware	Power Fault	LEDs blink synchronously at a slow rate (0.5s ON / 0.5s OFF)		<p>Description: The supplied power is outside the acceptable voltage or current margins.</p> <p>Action: Verify the power source. If the fault persists, contact support.</p>
	Hardware Fault	LEDs blink synchronously at a fast rate (0.25s ON / 0.25s OFF)		<p>Description: A hardware malfunction has been detected.</p> <p>Action: Contact technical support.</p>
	Inactive State	LEDs blink alternately. (0.5s ON/OFF, out of phase)		<p>Description: The device is in a standby or inactive mode.</p> <p>Action: Activate the device via the control dashboard or by sending the appropriate serial command.</p>
Operation as Rover	Tracking Satellites	Both LEDs are solid ON.		<p>Description: The device is operational and acquiring a satellite fix.</p> <p>Action: Stand by. A position fix should be achieved shortly.</p>
	Position Fixed	Solid ON	Fast blink (1s ON / 1s OFF)	<p>Description: A standard GNSS position fix has been successfully converged.</p> <p>Action: The device is ready for standard operation.</p>
	RTK Fixed	Solid ON	Slow blink (0.25s ON / 0.25s OFF)	<p>Description: The device is successfully receiving correction data and has achieved an RTK fixed solution.</p> <p>Action: High-precision positioning is active.</p>

Category	Device Status	LED 01- Green	LED 02 - Yellow	Description & Recommended Action
Operation as Base	Tracking Satellites	Both LEDs are solid ON.		<p>Description: The base is working correctly and tracking satellites in view</p> <p>Action: Stand by. A position fix should be achieved shortly.</p>
	Position Fixed	Solid ON	Fast blink (1s ON / 1s OFF)	<p>Description: A standard GNSS position fix has been successfully converged.</p> <p>Action: Wait until the calibration process finishes.</p>
	RTK Fixed	Solid ON	Slow blink (0.25s ON / 0.25s OFF)	<p>Description: The device is ready to send RTCM.</p> <p>Action: Base is ready to use.</p>
	Dead Reckoning	Solid ON	Double Fast Blink + Pause (2 × 150 ms ON / 150 ms OFF, followed by 0.5s OFF)	<p>Description: The device is operating in Dead Reckoning mode.</p> <p>No action required. GNSS positioning will automatically recover when the signal improves.</p>

Table 12: RED LED Behavior

Group	LED 03		Meaning
	ON	OFF	
Serial	Blinking	-	Serial Communication Working via COM1, exclusively

4. Firmware Update

4.1. Nordian Application Software

Nordian Inc. disposes of a proprietary software aimed for serial communication with all Nordian products, as well as for its firmware update. To proceed with the firmware update, please refer to the Nordian Inc. website www.nordian.com/support and download the software.

The software has a serial terminal interface that can be used to communicate with the Spectrum Rugged Receiver. The figure below shows the software interface and its main communication functionalities.

Figure 3: Nordian Software Interface

Legend:

- Serial terminal command line: write here the commands according to the *Interface Manual*.
- Send Command: after writing the command, click on this button to send it to Rugged Receiver.
- Save Log: If the user selects a file, the terminal data will be saved to that file until the user clicks at “Stop Logging”.
- Erase Terminal: click here to erase the Serial terminal for better visualization.
- Send Configuration: after loading a command script click here to send it to Rugged Receiver.
- Load Command Script: a series of commands can be written in a text document and loaded using this button. This is useful if a series of Precisio devices shall be configured in the same way, thus the process can be done in a semi-automated way.

NOTE: remember to always connect Rugged Receiver to the correct port and select the correct serial baudrate (default 115200).

4.2. Firmware Update Process

Spectrum Rugged Receiver comes with a fully functional firmware already installed. Yet, due to Nordian's continuous improvement policy, new firmware versions may be made available online at www.nordian.com/support, without notification.

If Spectrum Rugged Receiver presents an unexpected behavior indicating a possible firmware issue, follow the instructions to update the firmware. Furthermore, if a new firmware version is available it is always recommended to update the firmware.

Follow the instructions below in order to update the firmware.

Connect Spectrum: connect Spectrum to the correct serial port with the correct baudrate. If the chosen baudrate doesn't match the device baudrate the software will remain idle, without properly communicating, thus updating won't be possible.

In the figure below Rugged Receiver is being connected to the software via COM21 and with 115200 (default) baudrate. The software will automatically identify the available ports. Note that all peripheral devices will be identified as a possible connection port, it's up to the user to identify the correct one.

Once the port and baudrate are selected press "Connect", if the connection is successful the button will update to "Disconnect", which means that when pressed it will disconnect Rugged Receiver.

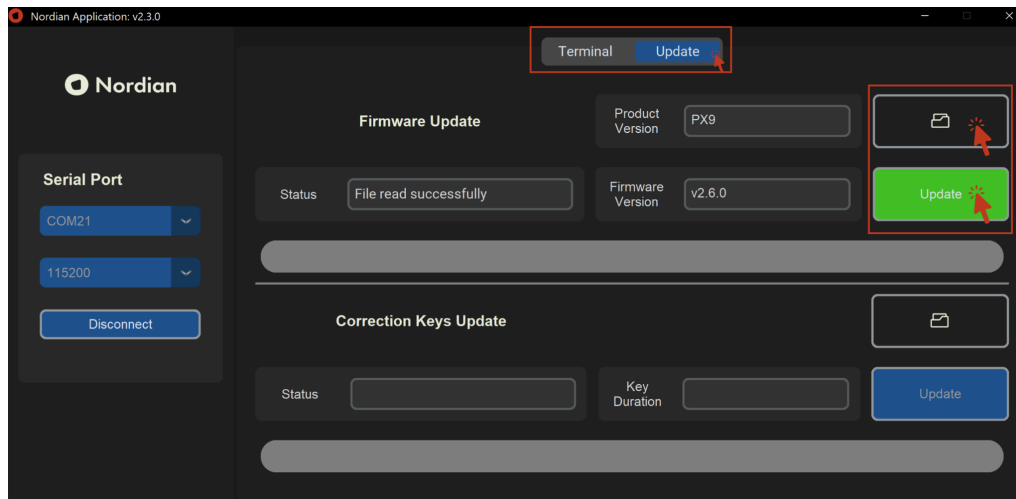

Figure 4: Rugged Receiver Connection

Load Firmware File: access www.nordian.com/support and download the firmware file (.ndn). Click on the folder icon and select the .ndn file. Once selected, the software will indicate that the firmware file corresponds to a valid firmware. It will show the version of the firmware and the corresponding product.

Once the firmware file has been read by the software the folder icon will turn green. If the Rugged Receiver is correctly connected to the software the “Update” button will be enabled. Press the button to begin the firmware update, as shown below:

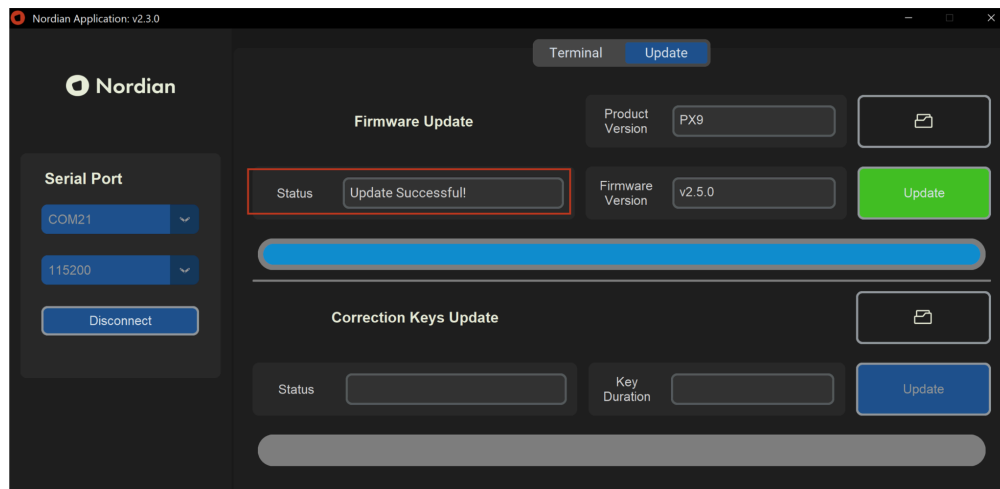

Figure 5: Rugged Receiver Firmware Update Screen

Update Successful: if the update process is successful the “Update Successful!” message shall be displayed on the Update Status field. If any communication or power failure occurs during the firmware update process the software must be closed and the process must be restarted.

Once the process is finished disconnect Rugged Receiver and close the software. Rugged Receiver is ready to use.

Figure 6: Rugged Receiver Firmware Update Successful

5. Warranty

Spectrum Rugged Receiver comes with a 12-month warranty starting from the shipment date. Nordian Inc. will repair or replace—at no cost—any device proven to be defective within this warranty period.

The warranty does not apply if the Spectrum Rugged Receiver has been subjected to negligence, misuse, improper storage, operation outside specified physical limits, improper application, physical damage, or unauthorized modifications or repairs by personnel other than Nordian Inc.

Please note that occasional, non-recurring errors or malfunctions that do not affect the device's continuous operation are not covered under this warranty.

6. Support

For specific support, doubts and warranty claim, contact Nordian Inc at:

Website: www.nordian.com

Customer Service: support@nordian.com
