MADE IN ITALY

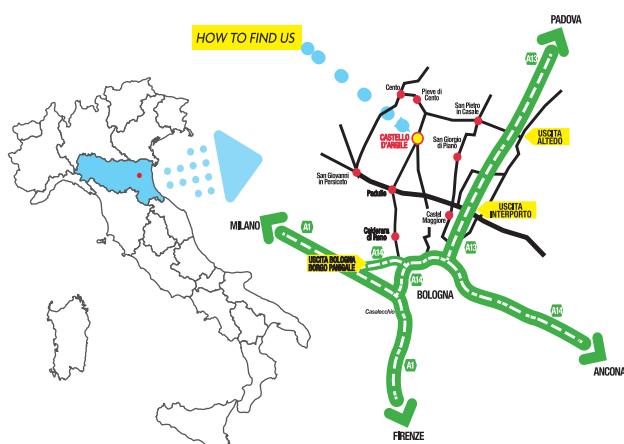

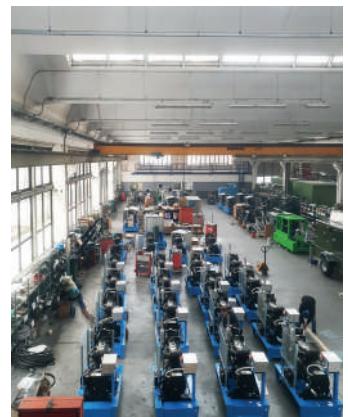

www.cogem.it

Cogem Srl

COGEM is a state-of-the-art industrial structure born in 1980 which has always focused its attention on the development and manufacturing of generating sets and motorpumps both for the agricultural and industrial sector.

Location:

Cogem is located in Castello D'Argile close to Bologna, in the North of Italy and it is easily reachable from Venice airport or even better from Bologna airport.

MADE IN ITALY: it is not simply a word but a deeper concept involving constant commitment and passion to create a prestigious range of high-quality products through a know-how acquired in many years of experience in the sector.

All ranges of product are carefully designed for the global market and are custom made to a high level of production, organization and flexibility.

A “Made in Italy” product is always a choice of quality!

Products and certifications

In the last years technology has remarkably evolved and Cogem has always been able to adhere to the fast developments in the market, researching and developing products that employ innovative technologies, with the aim of optimizing its production efficiency and the service performance offered by its systems, proposing the most suitable and effective solutions to the clients. Standard production is accompanied by the production of special machines, tailor made according to the customer's specific needs or based on the complexity degree of the project.

We only involve resources that bring **VALUE** for our customers!

After the first products which date back to 1980, its technical skills have allowed Cogem to grow rapidly and to expand the range of products offered. It is thanks to a group of trained and expert technicians, to a complete range of high-quality products and the know-how acquired through years of cooperation with leading companies, that Cogem has become a worldwide leader in the design and manufacture of generating sets and motorpumps.

Cogem designs and manufactures diesel generating sets ranging from 9 kVA up to 2280 kVA for different types of applications: from industrial, construction and mining, to residential sector, telecommunications, up to hospitals and healthcare centers, civil defense, tourism and entertainment just to name a few.

All gensets are powered by primary engine and alternator brands. Moreover, the company counts on a large stock of engines and alternators always available in its warehouse, as well as control panels, ATS and many other main components to cover any urgent production requirements.

Cogem also produces a range of Motorpumps and innovative solutions for the agricultural and irrigation sectors, as well as a series of Lighting Towers mainly used for construction area and entertainment.

Cogem complies with ISO 9001:2015, the international standard dedicated to Quality Management System. Quality in fact has always been a fundamental value for the company to be applied to all processes, structures and resources to guarantee the best efficiency and to achieve the important goal of customer satisfaction.

Our Services

- Consultancy: We are ready to support our customers in the whole purchase process, starting with the correct sizing of the motorpump and offering the most suitable solutions for the specific needs. We count on a skilled and expert team of engineers and technicians who always consider the project in all its different stages: from the beginning through the development of the customization, passing through the different phases of the production, to the final operating tests in our modern technical rooms to which each machine is subjected at the end of the manufacturing process.

It is part of Cogem commitment to invest continuously in Research & Development with the aim of offering the latest technologies on products and services and granting the highest performances to the customers.

- Special solutions: A team of constantly updated experts supports the customer in identifying the appropriate results even in the most complex applications.

- Rental: The Rental Service counts on a wide fleet of machines, all of them of own and recent production, such as generating sets, tanks, automatic control panels, transformation cabins, always supported by a team specialized in the sector with many years of experience for a reliable support of any customer's requirements.

- After-sales service and spare parts: A professional Service Assistance in case of machine failure or downtime is guaranteed by a qualified team of experts to support the clients, detecting the problem and offering the most appropriate procedures and solutions for repairing and maintenance operations.

Diesel Power Generator Ranges

OPEN RANGE - COGEM GENERATING SETS

The OPEN version of Cogem generating sets is manufactured with high-quality steel base-frame, robust and compact to allow the installation in several different applications.

The integrated fuel tank allows operational autonomy of at least 8 hours at 75% of PRP power. Of course, the autonomy of the generating sets vary with the varying of the installed power and relative size of the frame. The open range offers multiple power sizes ranging from the smaller 9 kVA up to the bigger 2000 kVA and over.

OV RANGE - From 9 kVA to 800 kVA

OVB RANGE - From 800 kVA to 2280 kVA

Diesel Power Generator Ranges

SOUNDPROOF RANGE - COGEM GENERATING SETS

The SOUNDPROOF version of Cogem generating sets offers as standard solution a high level of sound attenuation canopy, manufactured with selected galvanized steel which guarantees also a great protection against the external agents. Infact, the canopy is both sound and weatherproof, allowing the unit to be installed in particular environments for various type of installation.

The whole range has been developed following the upmost level of technologies available in order to guarantee all types of customization.

This is the right product to be suitable for the installation of several accessories, as well.

In addition to the extremely compact shape of the soundproof range, wide doors allow a full access and inspection to all the internal components. These useful features guarantee easy movements when arranging maintenance operations and save time during routine checks.

Common elements for the various ranges of Cogem soundproof versions are: robustness, versatility and customization.

SSV RANGE - From 9 to 60 kVA

 **Perkins**

 **DEUTZ**

SV RANGE - From 30 to 750 kVA

 **Perkins**

 **FPT**
POWERTECHNOLOGIES

 **VOLVO PENTA**

 **DEUTZ**

 **DOOSAN**

 **Baudouin**

Diesel Power Generator Ranges

BSV RANGE - From 750 kVA to 1750 kVA

BASIC RANGE - COGEM GENERATING SETS

The BASIC range is focused on essential features to guarantee power supply in all different applications.

Easy to install, the added value is mainly represented by the cost/quality ratio it offers, this range is particularly suitable to operate in harsh environmental conditions.

One of the most interesting and innovative aspects of the BASIC range is its stackability capacity, as well as the very compact dimensions, all these features combined together allow to significantly reduce the shipping costs.

BSC RANGE - From 9 to 200 kVA
