

Environmental Policy

Lorclon Ltd is committed to protecting the environment by complying with all relevant UK legislation, meeting national standards relating to the environment and in accordance with best working practices currently in use by the industry. There is an ongoing commitment to recycling and the prevention of pollution which requires working procedures to be frequently reviewed and adapted to reflect the continual changes that are taking place in the industry. There is a commitment to continually improve the management system, demonstrated by reviews, and fulfil our compliance obligations to ensure environmental protection.

The company uses the word environment to cover the natural environment and ecosystems as well as the built environment and the effect the company's operations can have on people's lives and heritage. As a civil engineering company working on infrastructure schemes, this pledge to environmental protection is further extended to protect the health & safety of employees and the public in general so that the company's impact on people's environment is beneficial and not harmful.

Our key environmental commitments are to;

- Fully comply with current legislation, our own company operating procedures and/or clients operating procedures to ensure the highest standards are obtained. The company is not satisfied with merely satisfying minimum legal requirements but will be proactive with its clients in setting and achieving higher standards when practicable.
- Ensure any subcontractors working under the company's control also follow similar standards and attitudes.
- Ensure company staff are aware of environmental issues and the procedures they must follow.
- Minimising the impact of the company's activities by adopting best practices that are available at that time. This maxim will be applied to all aspects of the company's activities including design, site operations, plant & transport selection and use, energy efficiency, re-use and recycling options, and waste minimisation.

With regards to site activities, environmental issues will be considered along with quality and health & safety issues at the planning stage and the environment impact assessment will be incorporated into the project Health, Safety & Environmental plan and agreed with the client before work commences.

Objectives are set with regular monitoring via the management review process to ensure the company is achieving these objectives. The company is certificated to ISO 14001 and has adopted the philosophy detailed in the standard in its operations.

The Environmental policy is available to all staff electronically via the company server and a copy is displayed on the premises. Where an interested party requires a copy of the policy, it will be made available upon request.

This Policy will be reviewed annually for its continuing suitability, typically via the management review process.
