

MONA VALE ROAD UPGRADE

The Mona Vale Road East Upgrade involved the widening and upgrade of a key Northern Beaches road corridor. BBN Consulting supported the project after asbestos was identified on the ground surface and within soil near the existing road and proposed widening works. Inspections, assessments and removal guidance, followed by daily airborne fibre monitoring and supervision were completed during the three month remediation program.

01. PROJECT CONSIDERATIONS

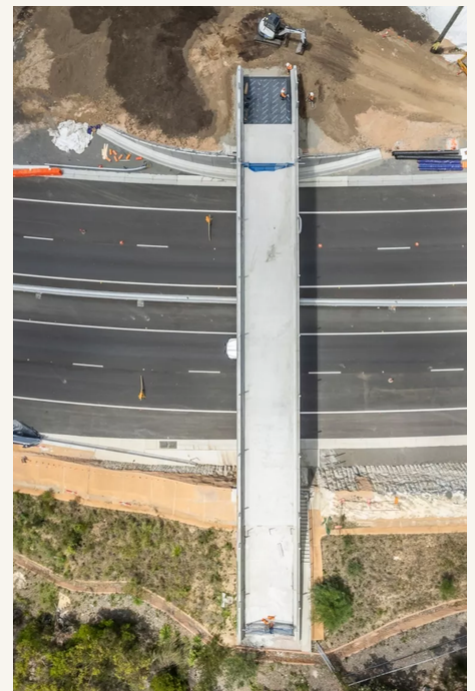

- » Asbestos identified on the ground surface and within soil
- » Impacted material located beside the existing road and widening works
- » Remediation required within a busy live road corridor
- » Daily monitoring and supervision required during removal works
- » Staged clearance inspections needed as sections were remediated

02. VALUE DELIVERED

- » Defined asbestos impacts across affected work areas
- » Provided practical recommendations to guide removal works
- » Supported safe remediation through daily monitoring and supervision
- » Issued staged clearances as sections were completed
- » Helped works progress safely within a major infrastructure project

03. OUR APPROACH

BBN completed initial site inspections and asbestos assessments to understand the extent of impact and guide removal requirements. During remediation, BBN provided daily airborne fibre monitoring and supervision over a three month period, with clearance inspections issued progressively as each section was completed.
