Heel Keeper Ultra

www.ulcersolutions.com

The Heel Keeper Ultra is a comfortable, cost-effective off-loading device that helps prevent foot, heel, and ankle pressure injuries. Its physician-designed, patented calf-cradling cushion floats the heel above the resting surface, eliminating surrounding surface pressure while leaving the heel and foot uncovered for wound inspection and dressing changes. Patients can walk or stand without removing the device, and its flexible design accommodates compression stockings, wraps, and SCDs.

Fewer Injuries, Faster Healing, Greater Cost Savings

Complete Pressure Relief of the Heel and Ankle

The heel is free-floating, eliminating contact with any potential pressure-inducing surface(s).

Compatible with SCD's

The Heel Keeper includes an aperture for safely routing tubing from Sequential Compression Devices or similar equipment to prevent potential tubing pressure injuries.

Durable Flap With Aperature

Durable anterior closure flap with an aperture to provide a safe portal for SCD tubing or other monitoring devices.

Keeps Feet Cool

The Heel Keeper Ultra keeps the foot cool to keep patients wearing the device longer.

Allows Ambulation

The secure anterior flap allows safe ambulation while in the device. No need to remove for patient transfers, bathroom use, or brief therapy sessions.

Superior Comfort

Enhanced comfort, improved compliance. The Heel Keepers superior comfort results in a 60% increase in duration of use when compared to off-loading boots.

Hemless Design

Easy to Walk

Detachable Stabilizing Wedges
