Ulcer Solutions

The Next Evolution in Pressure Injury Prevention & Treatment

The Ankle Keeper

Currently the only product of its kind on the market, the Ankle Keeper is an innovative off-loading device that is designed to prevent and treat pressure injuries/ulcers of the ankle bones (malleoli), replacing the traditional bulky and uncomfortable boots.

Our physician-designed U-shaped cushion, combined with an elastic sleeve, effectively offloads the malleoli while maintaining the highest level of patient comfort.

Effectively off-loads the malleoli
These wounds are very difficult to heal due to the extremely thin overlying skin.

Manages peri-ulcer swelling
Physician-designed “Horseshoe cushion” allows lymphatic drainage and edema release in the physiologic direction toward the heart, minimizing edge effect while off-loading the ankle bone (malleolus).

Washable moisture-wicking material
Constructed from moisture-wicking fabric, the entire device (including the foam insert) is washable, making it easy to maintain a clean treatment environment.

Comfortable
Comfort = Compliance. Extended time in the device = quicker healing and greater cost savings.

Hemless design
Our no-hem design prevents skin irritation of the shin and foot that is common in other products. The Ankle Keeper limits exposure of the skin to stitching wherever possible.

Safe for walking
The Ankle Keeper can be worn with most shoes or slippers and used in conjunction with compression sleeves.
