

OCS Payments E-payments

OCS - Payment Links

Unifiedpost Group is a provider of the OCS (Open Collection Service) solution, which generates a link or QR code for payment. It can then be added, for example, to an issued invoice.

The customer is redirected to the OCS website, and then (after selecting the payment method and bank) directly to the online banking service, where they approve the transfer or card payment. OCS enables immediate payment and shortens the waiting time for funds.

OCS payments:

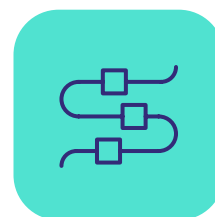

- ✓ are made directly between the Client's account and the invoice issuer's account
- ✓ the invoice issuer can specify their account in a bank as the beneficiary account
- ✓ the Client's account number appears in the transaction description
- ✓ the transfer data contains exactly the same information that the user entered on the invoice (invoice number, payment details)
- ✓ they enable the payment to be linked to the invoice on the recipient's side
- ✓ they do not generate any additional costs imposed by the bank
- ✓ in addition to bank transfers, we also handle card payments

We do not charge a percentage fee on the transfer amount - the cost of the transaction, and calculated only from the actual operations performed.

Payment from a bank account

Requires the payer to log in to electronic banking, fill in transaction data and transfer order.

OCS Payment

After clicking the link or scanning the QR code, the payer can make immediate payment for the services or products provided.
