TrichoAcademy: Compounding for Alopecia

This course offers a structured and insightful exploration of alopecia and its treatment through compounding. It begins with an overview of the prevalence and psychosocial impact of alopecia, followed by a clear explanation of hair follicle anatomy and the hair growth cycle. Various types of alopecia are reviewed, along with their underlying mechanisms.

The second part focuses on the formulation process, evaluating topical vehicles used in the management of alopecia. You'll compare their advantages and limitations, and review active pharmaceutical ingredients (APIs) with attention to stability and compatibility considerations. Emphasis is placed on how to select the appropriate vehicle based on the characteristics of each API and the therapeutic goals.

The final section provides practical guidance on compounding alopecia formulations using Tricho vehicles, offering actionable knowledge for creating effective, patient-specific treatments.
