Personalized treatments for acne: a pharmacogenomics-centered approach

Pharmacogenomics is a branch of both pharmacology and genetics that correlates genetic information of the individual in order to guide the pharmacological treatment, improving safety, efficacy and satisfaction. Fagron AcneTest analyses 180 genetic variants on predisposition to acne-related lesions and the response to pharmacological treatment.

Dr. Gustavo an expert in genetics, guide us through basic aspects of acne test, clinical interventions as well as a report review.
