

SALT DURABLE CREAM

High-Capacity Transdermal Base

Salt Durable Cream is a cosmetically elegant compounding base built for transdermal preparations containing high percentages of APIs or multiple actives. It delivers an improved feel over traditional PLO-based delivery systems and is ready to use, requiring no pre-wetting of actives or additional thickening agents. With a high API load capacity of 40%, it gives compounders the flexibility to formulate complex, multi-drug preparations with confidence.

HIGHLIGHTS

- **Broad pH Stability** — Remains stable across a wide pH range, giving compounders confidence when working with a variety of active ingredients.
- **Broad Salt Stability** — Maintains consistency and performance even when formulated with a wide range of salt forms.
- **No Pre-Wetting Required** — A time-saving, ready-to-use base that skips the pre-wetting step traditional PLO systems require.
- **No Additional Thickener Needed** — Comes fully formulated, streamlining the compounding process and reducing prep time.
- **Improved Feel vs. Traditional PLO** — Offers a more cosmetically elegant, refined after-feel than conventional PLO-based delivery systems.

SAMPLE FORMULAS

- FA-13768** – Verapamil HCl 10% - Diclofenac Sodium 5% - Ibuprofen 3% - Pentoxifylline 3% Cream (Salt Durable)
FA-13763 – Diclofenac Sodium 10% Cream (Salt Durable)
FA-24023 – Benzocaine 20% - Lidocaine 10% - Tetracaine 10% Cream (Salt Durable) (PM140)

High API Load (40%)

Engineered to hold a high concentration of active ingredients without compromising stability or texture.

Paraben-Free

Formulated without parabens, a common preservative class some patients prefer to avoid.

Fragrance-Free

Contains no added fragrance, reducing the risk of irritation for sensitive-skin patients.
