

Palette Edge Fleet Liftoff Kit

Scale Kubernetes to dozens of edge sites quickly and easily, with our smart software and services bundle.

Your goal

When you need to roll out containerized applications at scale to edge computing environments, our Palette Edge platform gives you the automation and consistency that make it achievable. But how do you get started with Palette and show value to your business, fast?

The solution

Our prebuilt **Palette Edge Liftoff Kit** gives you everything you need to accelerate time to value. For a single, fixed preferential price, you get:

- **Palette licenses** for up to 100 small form-factor edge devices, for a whole year — enough to cover a whole fleet for the typical enterprise.
- **Remote implementation services** from our experts covering edge blueprint design, fleet policy automation and initial rollout.
- **Production technical support** via phone and web for the whole term.
- **Your choice** to use our Palette SaaS instance or self-host for an additional fee of \$5,500.

Why choose Liftoff?

- **Predictable:** firm scope, timeline and cost — no surprises.
- **Full-featured:** benefit from all of Palette's edge capabilities, no lab limitations.
- **Production-ready:** we guarantee live clusters you can run for the long term.
- **Hands-on enablement:** your team learns best practices side by side with our architects.
- **Future-proof:** add more licenses or services to scale whenever you're ready.

It's way more than just a pilot or proof of concept. In just weeks you'll have deployed live edge devices, ready to deliver value for the rest of the year.

Ready to launch?

The Palette Edge Liftoff is priced at just \$32,500 when you choose our SaaS edition. Contact your Spectro Cloud representative today.
