Taxis on time

✓ **Obtain optimal traffic flow based on forecasts**
✓ **Achieve minimal waiting time and no over capacity**
✓ **Reduce queuing and costs with freeflow**
✓ **Increase customer satisfaction with sanction module**
✓ **Create high security and get a low error margin of with automatic integration to the booking centrals**

Are you handling your traffic as **intelligent and efficient** as possible?

We have developed a green cloud- and prognose based system that sets new standards in the market for taxi and bus management at for example airports.

Unique features:

- Full integration to the booking centrals
- A prognose based system that calculates the need for taxies and over capacity is avoided
- Intelligent traffic control, monitoring and registration to ensure a smooth flow during peak hours
- Sanction modules that help to maintain a high service level toward end users

We offer:
The solution giving the market's most efficient traffic handling

Intelligence, innovation and integration

Working with us you are guaranteed +20 years of experience and knowhow from the traffic industry. We are known for our innovative and modular concepts that bring beneficial advantages in terms of improved operation, increased revenue and a high level of safety and adaptability.

Our expertise within software-, hardware- and concept development enables us to design the ideal set-up for you and your business. The future of traffic management is complex, and the system must be future ready and easily customizable towards new tendencies, which we focus on – every day.
