

RWE Project Leader | Health Data & Epidemiology

NordicRWE · Denmark

Do you want to make a difference with cutting-edge real-world evidence? NordicRWE is a research and technology company dedicated to using Nordic health data to generate new knowledge. Our goal is to make drug development more efficient while contributing to better treatment and health for the population. We are now expanding our team and are looking for an RWE Project Leader based in Denmark.

Who are you?

You have a solid background in epidemiology, statistics, or data science, and a genuine interest in real-world evidence. You are curious, analytical, and enjoy working across methods and data sources to answer complex questions. You are comfortable taking ownership of projects — coordinating timelines, deliverables, and stakeholders — while also contributing hands-on to the analytical work. You thrive in a collaborative environment and are comfortable working both independently and as part of a team.

What are we looking for?

- A degree in epidemiology, statistics, data science, or a related field (MSc or PhD preferred)
- Experience working with real-world data — including Danish registries, claims data, or electronic health records
- Familiarity with the Danish health data landscape and experience navigating the approval process for accessing Danish health data (e.g. Statistics Denmark, Sundhedsdatastyrelsen)
- Experience with study design, protocol development, and statistical analysis plans
- Proficiency in analytical tools such as R, Python, SAS, or similar
- Strong communication skills in English; Danish or another Scandinavian language

What will you do?

- Design and conduct RWE studies using Danish and Nordic health data
- Develop protocols, analysis plans, and carry out statistical analyses
- Contribute to reports, publications, and regulatory submissions
- Collaborate with internal teams and external partners, including pharma clients
- Lead project management and quality assurance of study deliverables

What can you expect?

You will work on meaningful projects at the intersection of data science, epidemiology, and healthcare. We offer competitive terms, a flexible work environment based in Denmark, and a culture where ambition and collaboration go hand in hand.

How to apply

Send your application and CV to info@nordicrwe.com no later than 21 June 2026.
