

PREMIUM GENETICS FOR PREMIUM MARKETS

185 WAGYU BULLS

Thursday 4th September, 2025 | 1pm (AEST)

On farm and online via AuctionsPlus

AN ELITE OFFERING OF HIGH QUALITY BULLS

Average marble score of +2.6

166 bulls with a marble score over +2

Average in the top 6% for both the F1 index and Breeder Feeder Index

TRENTBRIDGE.COM.AU

2025 BULL SALE

Thursday 4th September at 1pm (AEST)

Bulls penned from 10am

OFFERING

185 BULLS FOR SALE

On property sale and online via AuctionsPlus

ADDRESS

1953 Aberfoyle Road, Aberfoyle "Bambi"

SALE DAY INFORMATION

Directions: Please note that sale day and inspections will be held at our property '**Bambi**' 1953 Aberfoyle Road, Aberfoyle (next door to 'Trent Bridge'). The live auction will take place in the 'Bambi' woolshed from 1pm AEST and will be interfaced online with AuctionsPlus.

Catering: We love nothing more than bringing friends and family together for a great meal, on sale day we will have all cylinders firing with a BBQ lunch provided for all guests and complimentary tea and coffee available.

We have partnered with Andrews Meats to bring you meat from their industry leading Tajima program (F1 and Fullblood). Thanks to Jeremy and the team for helping us feed the sale day crowd.

Insurance: Bulls can be insured through ACME insurance brokers, representative Rod Butler can be contacted via 0448 108 867 and will have a stand at the sale. Alternatively please make arrangements with your preferred agency. We recommend that bulls are insured.

J-BAS: The Trent Bridge herd is J-BAS 7.

Stud Transfers: Please advise on sale day if you require bull ownership to be transferred to your AWA prefix.

Rebate: A 2.5% rebate is offered to outside agents introducing buyers prior to sale day. Client introductions must be made in writing to the vendor (via email charlie@trentbridge.com.au) 24 hours prior to the sale, and settle within 7 days.

DISCLAIMER: All reasonable care has been taken by the vendor and selling agent to ensure that the information provided in this catalogue is correct at the time of print. The vendor and selling agents make no representations about the accuracy, reliability or completeness of information provided and do not assume any responsibility for the use or interpretation of the information included in this catalogue.

SALE DAY SAFETY

Visitors are to enter bull pens at their own risk. Children under 16 years are not permitted to enter the bull pens.

All care is taken to ensure our bulls are consistently managed in a low stress environment. However, we cannot ever predict or guarantee an animal's behaviour.

Sale day places abnormal pressure on our bulls with crowds of people walking around them and so the behaviour of even the quietest bull can be unpredictable. With this in mind, we ask that while inspecting sale bulls you move around them quietly and respectfully. Please do not congregate in pens and be aware of bulls fighting.

TRENT BRIDGE
WAGYU

WELCOME TO TRENT BRIDGE

Dear Wagyu Breeders,

The Perry family and our wonderful team warmly welcome you to our third annual Trent Bridge Wagyu Bull Sale, to be held on Thursday, 4th September 2025.

Firstly, a most sincere thanks to those who supported our bull sale last year — both online and in person. Our bulls went from the Gulf in the north to Flinders Island in the south, and a lot of places in between. We are incredibly grateful for the ongoing support of both the farmers who purchase our bulls and the supply chains who buy their cattle.

This year, we are proud to offer 185 Wagyu bulls, our largest and most consistent line yet. What distinguishes this draft from previous years is a more intentional focus on growth and carcass weight. Marbling remains king—but once an elite level is achieved, we believe the next frontier is fast, efficient growth and heavier, more profitable carcasses.

Year on year, we've lifted the average EBVs for 200-day, 400-day, and carcass weight by between 21% and 24%. Historically, selecting for growth traits has come at the expense of marbling, as these traits are often antagonistic. But this year, we've achieved gains in both—with the average Marble Score EBV increasing significantly to +2.6, and 166 bulls above +2. Just as importantly, this lift in weight has not been accompanied by a disproportionate increase in birthweight, a vital consideration for our many clients using Wagyu bulls over heifers to support easy calving.

Since our inception, Trent Bridge Wagyu has focused on breeding bulls for the F1 market—alongside producing our own F1 feeders. This year's catalogue reflects that investment, with over 170 bulls well-suited to commercial F1 production systems. However, we're also responding to growing demand for higher content Wagyu cattle. You'll find a large proportion of bulls that are genuine allrounders, capable of producing premium carcasses in terminal programs while also delivering maternal strength for self-replacing fullblood or purebred herds.

The Breeder Feeder Index (BFI) is a great way to assess the merit of a bull in a self-replacing and terminal program. 180 of the 185 bulls catalogued rank in the top 20% of the breed for BFI—highlighting their capacity to breed animals that raise a fast growing animal that can also perform over the hook.

While many of our friends in the south have endured severe drought and others in the north have battled damaging floods, we've been fortunate to enjoy a kind season. Our cattle are marching through winter in great order, and we're particularly pleased with how the bulls present this year. We look forward to the opportunity to show them to you in person.

What's happening in the market?

In April, we attended the Australian Wagyu Conference where respected analysts Simon Quilty and Matt Dalgleish shared a very positive outlook for the Australian beef industry. They pointed to a combination of macro trends—trade tensions in the US, a weak Aussie dollar, strong US consumer demand, and signs of a US herd rebuild—supporting strong prices through late 2025, with a larger lift expected in 2026. Wagyu was predicted to lag slightly behind the broader market before following the upward trend.

Five months on, we have to give them credit—the broader beef market is indeed firming. We remain optimistic that stronger farm gate prices for Wagyu feeder cattle are on the horizon.

We hope to see you at Trent Bridge on Thursday, 4th September. If you have any questions about the bulls or would like to inspect them before sale day, please don't hesitate to get in touch.

Warm regards,

Charlie Perry
On behalf of the Trent Bridge Wagyu team

THE WAGYU FEEDER CHECK

We recently received carcass results from 400 F1 animals that had just been processed. There is always a mixture of trepidation and excitement when you receive carcass feedback. It has to be one of the slowest feedback loops in history. Was the decision I made 4 years ago at joining a good one? But this round of feedback was different, because it was the first time we had received data on bodies that had all had the Wagyu Feeder Check (WFC) completed on them. Finally the feedback loop was closed and I could answer the question I had been curious about for years, was the genomic prediction tool useful at forecasting the actual carcass performance of our F1's.

What is the Wagyu Feeder Check?

The WFC is a commercial DNA genomic test designed for Wagyu content beef cattle to determine the genetic merit of animals. Based on a genomic sample the WFC will give an individual animal a ranking out of 10 regarding its genetic merit across 4 key areas:

- **Marble score**
- **Carcass Weight**
- **EMA**
- **ADG**

It will then summarise these 4 metrics in a weighted index to give an overall score out of 100 which aims to reflect the genetic value of the animal in a wagyu supply chain.

Perhaps most importantly, the WFC also determines the sire of the animal. As wagyu breeders we are all trying to gradually and continually improve the performance of our animals. However, in the absence of sire verified carcasses, it is very hard for our business to make meaningful management decisions when we get feedback data. The genomically sire verified animals enable us to submit this crossbreed data into breedplan, which will substantially increase our capacity to "prove up" bulls. As Chair of the Wagyu Association when it was released in 2023 I have always been an unabashed supporter of the WFC. However, at a cost \$45 per test, the WFC has to make a meaningful contribution to our management decisions.

I had four questions that I wanted answered:

1. Is there a reasonable correlation between the WFC and actual carcass performance?
2. Is there a reasonable correlation between the WFC marble ranking and the EBV for marble score for the bull?
3. Does the sire EBV for marble score provide a reasonable indicator to carcass performance?
4. Is it reasonable to use WFC results (which are received 18 months before slaughter) as a lead indicator on the performance of bulls and then adjust stud breeding decisions accordingly?

1. Feeder Check Marble Score v Carcass marble score:

Of the four traits that the feeder check reports on this was the one I was most interested in understanding the link.

The table below shows the average carcass performance for each Feeder Check Ranking. What we see is a complete correlation between the average of the feeder check and the average of performance.

Feeder Check Ranking	No of head	Carcass Marble Score
3	3	5.00
4	27	5.96
5	58	6.31
6	129	6.77
7	124	7.30
8	59	7.88
9	8	8.38

From my perspective this clearly show that if we can increase the average marble score feeder check ranking, we will increase the average carcase marble score.

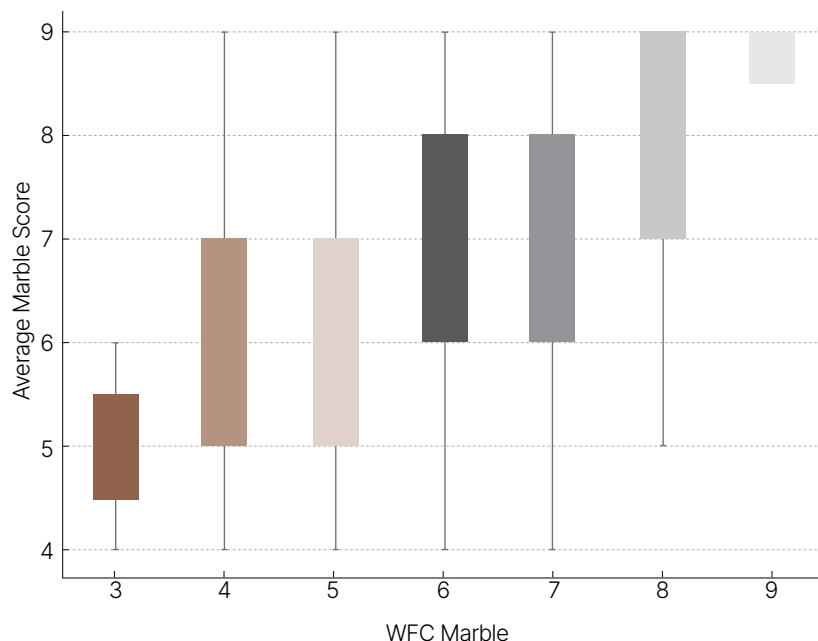

Its worth noting that like any data set, there are plenty of individual examples were an animal with a low feeder check score had a strong carcase performance, and visa versa.

The data is represented in a box and wisker graph below, and show that there is certainly outliers, however the trend between higher feeder and higher carcase performance is clear.

If there was something I was surprised or disappointed about was that the distribution between the top and bottom animals was smaller than I expected. One possible reason is that these animals had plenty of days on feed and I wonder if that reduces the difference between the top and bottom.

What this does highlight to me is the tremendous variation that is coming through on the females side. Within this data set we had 2 bulls with over 100 carcasses and one with 50. I.e. there is a statistically significant data set.

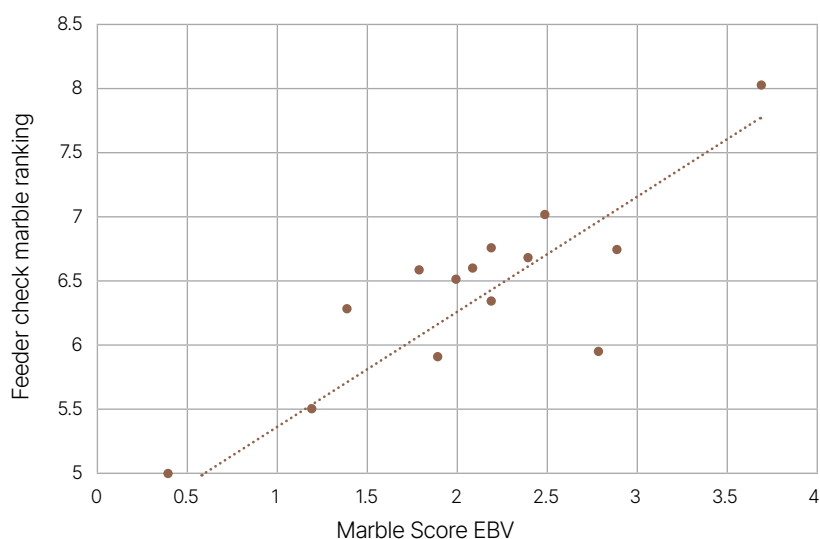

Box and Whisker Plot of Marble Scores by WFC Marble

2. Is there a reasonable correlation between the WFC marble ranking and the EBV for marble score for the bull?

The graph below plots the correlation between the WFC for marble score and the EBV of the sire. I was pleased to see such a strong correlation between the two. Like any data sets there are outliers, for example where a bull with a strong EBV had a disproportionately low feeder check ranking. But overall marble score EBV was highly predictive of the feeder check score.

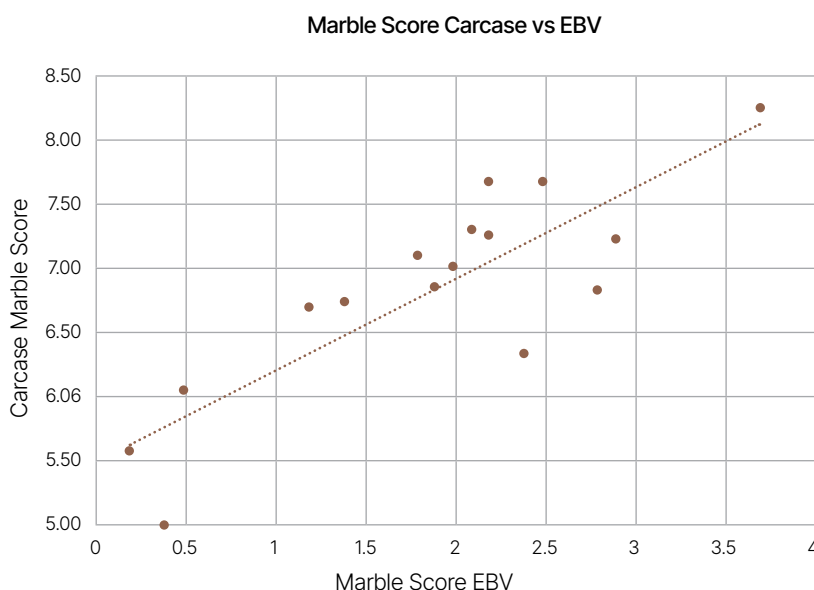

Marble Score Carcase EBV vs Feeder Check Ranking

3. Is the marble score EBV a good predictor of the carcass performance?

Perhaps the most pleasing aspect of this trial was to see the very strong correlation between the marble score EBV of and the actual carcass performance of bulls ($r=83\%$). At the extremes we had TBRFQ111 (9 progeny in this catalogue) with a marble score EBV of 3.7 produce a carcass average of 8.3 contrasted with TBRF402 carcass marble score EBV of .2 produce an carcass average of 5.5. (I promise I wasn't drunk when we selected this bull, we quite liked his pedigree). Sitting pretty well in the middle was TBRFQ159 with a 2.1 marble score and an average carcass performance of 7.3.

The outcome of this, the higher the average marble score EBV of your of team of bulls, the higher the performance.

4. Is Feeder Check useful for our business?

As weaning finished this year I saw we had completed over 1000 feeder check samples. At \$45 a sample this represents a significant investment for our business. And it begs the question, does this represent a valuable investment? The answer to this, from my perspective, is absolutely.

1. Despite there being a very strong correlation between marble score EBV and feeder check marble score, there is undoubtedly outliers, where bulls with a high marble score EBV have low feeder check result and a low carcass performance. Identifying those bulls early and removing them from our F1 and stud program represents a huge opportunity for us and for the quality of the bulls we produce.
2. This sire verified data can then be put submitted into breedplan which will significantly increase the EBV accuracy of our key sire lines
3. Although this update has been heavily focussed on marble score, there are multiple other key traits that we track and measure for. Linking on farm and feedlot growth rates to sire lines is another key data point in helping us improve the profitability and sustainability of our F1 program and in turn allow us to breed bulls

A final thought. Perhaps the most surprising thing in this data set was the significant variation I had in performance within sire lines. One bull TBRFN185 had 99 carcasses and averaged 7.21 at 441 kg carcass. A very acceptable result. But when you dig into the data you see a massive spread in the results. What this highlights to me is the huge variation we have in the quality of our angus cow herd. Our angus herd is entirely purchased and to me, identifying the poor performance in our herd and having a better process around purchasing in genetics represents another large opportunity for improvement. At this point we are looking at completing the genomic heifer select on our Angus herd to get a baseline on their performance. In an ideal situation we would then be able to identify the mothers of the poor Feeder Checked animals and remove them from our herd. Like all things in farming, each year there is an opportunity for incremental progress to be had!

NEW TO F1 WAGYU?

Historically the majority of our sale bulls have gone over angus females and into F1 wagyu programs. If you are entering into this market, here are a few things to consider:

Relationships: Less than 7% of F1's are bought and sold through public markets (like AuctionsPlus) the vast majority of cattle are sold directly into supply chains. If you are looking at moving into F1's for the first time, our suggestion would be to make contact with a supply chain and talk to them about your breeding plans. They may wish to discuss the type of female you will be using and will likely have specifications around the type of bulls that are suitable for their individual F1 programs.

Marbling is King: With the F1 program, the first metric to look at is the marble score EBV. Most supply chains look to have a marble score EBV average of over 1.5, though each supply chain is different.

Growth: Although marbling is critical, as a producer you still get paid on kilograms of live weight, so do consider the growth figures of the animals. The only thing to keep in mind is birth

weight. Although wagyu are smaller than other breeds, they still have the capacity to produce bigger calves – so we recommend a birth weight EBV of under 2.2 for heifers. In contrast if you are joining cows there is a lot more opportunity to push birth weight and growth figures.

A common question we get asked is around the different growth rates of F1's compared to a straight angus. Although there are a number of variables, including the growth figures of the specific wagyu bull, the average discounted growth rate is approximately 10%.

Replacement Females: Obviously we are very focussed on the bull side, but just as much attention needs to be placed on the female side of your breeding program. We recommend selecting females bred from studs with a focus on carcass traits.

YEARLING BULLS:

If you are using yearling bulls for the first time, here are a few things to consider:

- Wagyu's are naturally fertile, however, yearling bulls need to be looked after. Our recommendation is one yearling bull should not be joined to more than 30 females and consider the size of your joining paddock.
- If you are doing an AI program and then backing up with yearlings, consider more bulls, as a large number of animals coming on heat at one time can test their stamina.
- Once the season is finished bulls will often have lost quite a bit of condition, we suggest looking after them before the next joining.
- As mature bulls (24 months +), wagyus demonstrate great fertility and longevity and can normally handle around 55 to 60 females in a joining.

OUR BREEDING PROGRAM

Throughout this catalogue we describe in detail the merit of our animals in terms of their EBV's. The reason for this is simple, in a wagyu supply chain the value proposition is quite clear, the higher the value of the carcase (in terms of marbling, EMA, marble fineness and carcase weight) the better the outcome across the supply chain. But in our breeding program, our first priority is to apply the foundational principles of cattle production to our herd:

- A female must go in calf, raise a calf and go back in calf. Each year we continue to put more pressure on our joining window
- The animals must be structurally sound with good feet
- The animals must have a good temperament

Historically, we have had a very high marbling herd. Each year the average marble score of our entire year drop of calves will sit at around the 15th percentile for the breed. In general terms marbling and growth traits are inversely correlated: to breed for extremes in either of these traits is not difficult, but to have high marbling, with good growth capacity and carcase traits is more challenging. Over the last five years we have made a concerted effort to maintain a very high level of marbling, but also find bulls that can provide growth, carcase weight and have strong maternal features.

The catalogued bulls are sitting exactly where we want them to be with an average marble score of at +2.6 (top 7% of the breed) and an average carcase weight of +37 (top 22% of the breed). As described on page (6) a core part of our own business is breeding commercial F1 feeders.

Each animal is genomically tested with the latest technology, Wagyu Feeder Check and sire verified. This gives us the basis to collect significant amounts of data from weaning through to slaughter on their performance and profitability. This information is then incorporated into our stud breeding program to help us to continue to produce premium genetics for premium markets.

The Recessive Gene status for each animal is described in each lot and will look like this "B3F, CHSF, CL16FU, F11F, IARSF". If you looking to purchase a bull for a crossbreeding program (F1 to F3) then the recessive gene is not applicable as these conditions are not prevalent in other breeds. However, if you have a purebred or fullblood herd it is another data point to consider. We believe the genetic diversity in the Wagyu population is too small to completely discount any animal that is a carrier for a genetic condition, that being said, we do seek to actively manage it. You will see across the catalogue the vast majority of animals are free of all recessive genes.

If you would like more information on this topic visit:

Marble Score

The average marble score for the bulls is +2.6 which is in the top 7% of the breed

F1 Index

The average F1 Index for the sale bulls is 320 which is in the top 6% of the breed

Breeder Feeder Index

The average BFI for the sale bulls is 465 which is in the top 6% of the breed

Carcase Weight

The average carcase weight for the sale bulls is +37 which is in the top 22% of the breed

HEALTH CHECK AND VACCINATION SCHEDULE

All bulls have had the following treatments and will require an annual booster

- 7 in 1
- Pestigurad
- Vibriovax
- Tested negative for Pestivirus

In areas where 3-day sickness, red water disease or tick fever may be prevalent we recommend bulls be treated accordingly before entering these areas. We are happy to discuss this further with individual clients to meet their requirements.

Semen testing

All bulls will be semen tested by the industry leading team from Ced Wise Artificial Breeding Services. Test results will be supplied on a supplementary sheet on sale day.

- Pass (P)
- Qualified Pass (QP)

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny.

While we will never know the exact breeding value, for performance traits, it is possible to make good estimates based on the performance of the animal and its progeny. These are called **Estimated Breeding Values (EBVs)** and are therefore the best estimate of an animal's genetic merit. EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the Wagyu BREEDPLAN genetic evaluation and are reported in the units in which the measurements are taken.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

- LESS THAN 50% = Low accuracy and should be considered a preliminary estimate. The EBV could change substantially as more performance information becomes available.
- 50 – 74% = Medium accuracy, usually based on the animal's own records and pedigree.
- 75 – 90% = Medium-high accuracy and usually includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent.
- 90% and above = High accuracy.

FERTILITY AND BIRTH

Scrotal Size EBV (cm) is an indicator of male fertility regarding semen quality and quantity in Western breeds of cattle. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation (desirable) with age of puberty and fertility in female progeny. The relationship between scrotal size and fertility in Wagyu is assumed, but not proven.

Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to lighter birth weights and easier calving.

Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

GROWTH

200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

CARCASE

Carcase Weight EBV (kg) is based on abattoir carcase records and live weight measurements (particularly at 600-Day weight) and is an indicator of the genetic differences in carcase weight at the industry average slaughter age of 990 days. Larger positive values are more favourable.

Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 420kg dressed carcase. A higher positive EBV indicates larger eye muscle area and therefore higher retail beef yields. Ultrasound, Aus-Meat and Japanese Digital Image Camera measurements from slaughter animals contribute to this EBV.

Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 420kg dressed carcass. A higher positive EBV indicates more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent EBV (%) estimates the genetic differences in total (boned out) meat yield as a percentage of a 420kg dressed carcass. A higher positive EBV indicates higher percentage yield for the 420kg carcass weight.

Marble Score EBV: (Aus-Meat Marble Score) is an estimate of the genetic difference in the Aus-Meat Marble Score in a 420kg carcass. Marble Score EBV utilise the Aus-Meat Marble Score on a scale of 1 to 10, where 10 is equivalent to an Aus-Meat Marble

grading of 9+. Where results from the Japanese Digital Image Camera are available, marbling percentage and marble fineness are also used to calculate Marble Score EBV as the genetic correlations between these measures are very high. Larger positive values are more favourable.

Marble Fineness EBV: (Marbling Fineness Index) estimates the genetic differences in the Marbling Fineness Index (degree of fleck of marbling fat) as measured by the Japanese Digital Image Camera. A more positive EBV indicates higher levels of marbling fineness.

WAGYU BREED OBJECT INDEXES

BreedObject \$Indexes target economic breeding objectives based on average herd and market conditions and have generally targeted the main markets within the main production systems, combining genetic information within BREEDPLAN into one EBV for each \$Index that considers productions costs and realised value.

Breeder Feeder Index Promotes a high growth response, especially for post-weaning gain/Carcass Weight. It reduces the number of high ranking extreme high and low Birth Weight EBV sires, and delivers positive emphasis for Milk and Scrotal Size. It applies a slight negative emphasis on high Mature Cow Weight while strongly positively emphasising Carcass Weight; whilst also providing a high selection response for Marble Score.

Fullblood Terminal Index The Fullblood Terminal Index (FTI) has increased weighting on the Marble Score EBV and can be used to select bulls for the production of profitable slaughter animals where no progeny are retained for breeding. The FTI is suited to commercial producers of Fullblood cattle who provide supplementary feeding to grass-based production system before feedlot entry. The FTI targets to produce steer and heifer progeny of average feedlot entry weight and Marble Score significantly higher than 8.

F1 Terminal Index The F1 Terminal Index has an increased weighting on the Marble Score EBV and can be used to select bulls to produce profitable F1 slaughter progeny where non are retained for breeding.

The F1 Index estimates the genetic differences between animals in terms of net profitability cow joined based on production of a 420kg carcass from steers and a 385kg carcass from heifers at 28 months of age. In terms of relative economic importance, the F1 Index places the following emphasis on these main traits: 68% on MS; 9% on Residual Feed Intake (RFI) feedlot; 4% on sale liveweight; 6% on meat yield; 4% on dressing percentage and 9% placed on other young animal traits and 0% on maternal traits.

EBV PERCENTILE TABLE

NOTES: T158 was the top-priced bull from our 2023 sale. We've since purchased semen from the owners and used him extensively over the past two years. V822 is a great example of why we have so much faith in this sire — phenotypically outstanding, with short gestation, strong growth, positive scrotal, and an impressive marble score. He ranks in the top 5% for BFI and is free of all recessive genes.

LIVESTOCK AUCTION TERMS AND CONDITIONS OF SALE

CHAPTER ONE - PRELIMINARY

1. (a) A vendor is bound by these terms and conditions by offering livestock for sale by auction.
- (b) An agent (which includes an auctioneer) is bound by these terms and conditions by conducting an auction sale.
- (c) A buyer is bound by these terms and conditions by bidding at auction.
- (d) Competition and Consumer Act (Cth) 2010

It is unlawful for parties that are, or otherwise would be, in competition with each other to make, or give effect to, a contract, arrangement or understanding that contains a provision relating to:

- i. price-fixing; or
- ii. restricting outputs in the production and supply chain; or
- iii. allocating customers, suppliers or territories; or
- iv. bid-rigging; or
- v. collusive bidding.

Large fines and other sanctions may be imposed for unlawful conduct.

2. (a) In these terms the expression auctioneer, agent, buyer and vendor respectively includes the servants, contractors and agents of each of them. The auctioneer, agent, buyer and vendor shall be wholly responsible for the acts and omissions of their respective servants, contractors and agents. The term "auctioneer" includes, so far as the law and context permits, the vendor's agent.
- (b) When used in these terms the expressions "companion animals" means all animals originating from the same property on a particular day. Where lots are split and sent to multiple establishments, then all of these animals shall be regarded as companions.
3. The following applies in interpreting these terms and conditions:
 - (a) The following words have the following meanings:

Fees means all levies, charges, fees, costs and other expenses incurred or relating to these terms and conditions and the sale and purchase of livestock including, without limitation, transaction levies, yard and weigh dues, cartage, advertising and rebates, and whether paid for, or incurred, by the agent;

Livestock means animals auctioned pursuant to these terms and conditions; and

Price means the amount at which the lot has been sold to the buyer referred to in clause 7 of these terms and conditions.
 - (i) plus any Fees and other expenses incurred in relation to the purchase of livestock that are payable by the buyer; and
 - (ii) plus any GST added in accordance with clause 12.
- (b) These terms and conditions are subject to legislation or regulation in the State in which the auction is conducted and in the event of any conflict then the legislation or regulation will prevail. The provisions of these terms and conditions are in addition to, and do not derogate from, the duties and rights of vendors, agents and buyers set out in legislation and regulation in the State in which the auction is conducted.

CHAPTER TWO - STANDARD TERMS OF SALE

4. Subject to any reserve price, and to the right, prior to the fall of the hammer, of the vendor to withdraw any lot without declaring the reserve, the highest bidder shall be the buyer.
5. The auctioneer has the right to bid on behalf of the vendor provided that right is notified prior to the commencement of the sale and is subject to State law.
6. A bid cannot be made or accepted after the fall of the hammer unless, in accordance with clause 8, the auctioneer decides to put the lot up again.
7. Prior to the fall of the hammer the auctioneer shall announce the last bid and receive any further bids. The last price called by the auctioneer at the fall of the hammer shall be the amount at which the lot has been sold.
8. In the event of a disputed bid, the auctioneer is the sole arbitrator of the successful bidder or the auctioneer may decide to put the lot up again. The auctioneer's decision is final.
9. The auctioneer may refuse to accept any bid which, in the auctioneer's opinion, is not in the best interest of the vendor and need not give reasons for doing so.
10. A bidder shall be deemed to be a principal unless, prior to bidding, the bidder has given to the auctioneer a copy of written authority to bid for or on behalf of another person.
11. The successful bidder at a livestock auction sale must give to the auctioneer at the fall of the hammer:
 - (a) the purchaser's name; or
 - (b) the bid card number which identifies the purchaser; or
 - (c) the name of the person on whose behalf the successful bid was made; and
 - (d) the Property Identification Code (known as the "PIC") of destination.
12. The auction shall be conducted on the basis that the bid price shall be exclusive of Goods and Services Tax (GST). GST shall be added after the fall of the hammer for those sales subject to GST.
13. The vendor warrants:
 - (a) That the vendor has (or will have) the right to sell the livestock at the time of delivery; and
 - (b) That the purchaser will obtain title on completion of the purchaser's obligations under this contract including payment.
14. If a buyer does not comply with any of these terms and conditions, which includes the requirements of State law, any livestock knocked down to that buyer may be re-sold by public auction or private contract in whatever lots and manner the auctioneer decides. The re-sale may be with or without notice and shall be at the buyer's risk. The buyer is responsible for all loss and expense arising out of a re-sale and is not entitled to any resulting profit.
15. The buyer of livestock must pay the agent the full amount of the purchase price in immediate funds on receipt of a tax invoice. Payment is required prior to delivery unless some other time for payment is specified in an agreement between the buyer and the auctioneer that was made before the fall of the hammer. If, before delivery, payment has not been made then clauses 20 to 23 apply.
16. No person may bid unless, prior to the commencement of the sale, that person has made arrangements satisfactory to the auctioneer for payment for livestock purchased. If bids in breach of this condition are inadvertently accepted, delivery shall not be given until the purchase money is paid and any law, rule or practice to the contrary is accordingly negated as far as possible.
17. (a) Cattle sold on a live/weight basis that are weighed pre-sale are at the risk and expense of the buyer upon the fall of the hammer.
- (b) Cattle sold on a live/weight basis that are weighed post-sale are at the risk and expense of the buyer immediately after weighing.
- (c) All livestock other than cattle sold on a live/weight basis are at the risk and expense of the buyer upon the fall of the hammer.
- (d) Subject to this clause the sale is complete on the fall of the hammer.
- (e) The time for rejection is the time commencing at the fall of the hammer and ending at the first of:
 - (i) delivery is taken by a representative of the buyer;
 - (ii) departure of the animal from the purchaser's delivery pen; or
 - (iii) one hour after the last animal is:
 - a. in the case of pre-sale weighing, sold; or
 - b. in the case of post-sale weighing, weighed.
- (f) During the time for rejection the buyer may reject any animal which is lame, blind or diseased where that condition existed prior to the fall of the hammer but could not be reasonably observed when the animal was in the selling pen.
- (g) If the purchaser rejects an animal during the time for rejection then the sale of that animal is cancelled and the animal is returned to the vendor or sold on such terms as any buyer and the agent may agree, after the agent has disclosed the reason for rejection to that buyer.
- (h) This subclause applies only to cattle which are sold in Queensland at auction for slaughter. The agent has responsibility for the prevention of loss or escape (but not death, sickness or injury) of those cattle from the time of the fall of the hammer, for delivery to and from the scales, to the buyer's delivery pen and onto the buyer's nominated transport. This responsibility ends at the earlier of those cattle boarding the buyer's nominated transport or sunset on the day after the sale. This

subclause does not apply if the agent makes an announcement to that effect prior to sale.

19. (a) Subject to the right of rejection in Clause 18, all conditions and warranties expressed or implied by law are hereby excluded from the sale to the extent that the law allows. All lots are open for inspection prior to the commencement of the sale and are sold with all faults, if any. No compensation shall be given for any faults, imperfections, errors of description, number in or of any lots sold or otherwise.
- (b) Any claim or objection arising out of an error or misdescription in the provision of relevant information in terms of legislation or regulation concerning the National Livestock Identification Scheme (NLS) must be made by 5:00pm on the seventh day after the fall of the hammer. No objection, requisition or claim against the vendor or agent in respect of such error or misdescription can be made after that time.
- (c) Any statements made by the vendor or the auctioneer whether in writing or orally to the effect that any female has been pregnancy tested or scanned positive shall mean and require only that a certificate in writing shall be supplied to the buyer signed by a qualified veterinary surgeon or certified scanner certifying that the said female has been tested or scanned on the date specified in the certificate and that in the opinion of the surgeon or scanner was pregnant on that date.
- (d) For slaughter cattle, the agent undertakes to make every reasonable effort to ensure that any NLS cattle device number is transferred from the saleyard PIC to the purchaser's PIC on the NLS database no later than midnight on the day of the sale.
- (e) For other slaughter livestock the agent undertakes to make every reasonable effort to ensure that the NLS information is transferred from the saleyard PIC to the purchaser's PIC on the NLS database no later than midnight on the day of the sale.
- (f) Where livestock have a food safety or market eligibility status derived from the National Vendor Declaration (NVD) and/or the NLS/ERP database, the agent will inform the buyers by pre-sale catalogue and/or announce the status prior to the offering of those lots.
20. If delivery is made to, or possession obtained by, the buyer or its representative before full payment of the Price, then until full payment is received, the buyer:
 - (a) does not acquire title to the livestock;
 - (b) holds the livestock as bailee only for the vendor;
 - (c) must act in a fiduciary capacity in its relationship with the vendor;
 - (d) must store the stock separately so that they are readily distinguishable from other livestock owned by the buyer;
 - (e) is responsible for the safety and well being of the livestock;
 - (f) may make a bona fide sale for market value of any or all of the livestock. As between the buyer and the subsequent buyer, the sale shall be made by the buyer in its own name and not as agent for the vendor, however as between the vendor and buyer, the sale shall be made as bailee and agent for the vendor; and
 - (g) must keep and account for the proceeds of any subsequent sale separately from its other money and hold those proceeds, together with the benefits of any rights against subsequent buyers, on trust for the vendor.

The purchaser agrees that:

- (a) Clause 20 creates a registrable security interest under the Personal Property Securities Act (Cth) 2009 (PPSA);
- (b) The Purchaser acknowledges the rights of the Seller (and/or the Agent if Clause 25 applies) to register a financing statement under the PPSA with respect to the security interest created by this clause;
- (c) the Livestock are collateral for the purposes of the PPSA;
- (d) to the extent permitted, the Purchaser waives any right the Purchaser has under the PPSA to receive notices; and
- (e) the date upon which the security interest created by this clause comes into force is the first date on which livestock are delivered pursuant to this contract.
22. The buyer may not make any claim against the vendor for actions by the vendor or its agent under clauses 20 to 21 and indemnifies the vendor and its agent against any loss, damage, costs, expenses, penalties, fines or claims suffered by the vendor, the agent or any person or entity arising from the vendor exercising its rights under clauses 20 or 21.
- 23.1. Clause 23 applies whenever the agent pays the vendor before being paid by the buyer, which the agent is not bound to do. The agent is then the sole creditor agent of the vendor at law.
- 23.2. The vendor hereby gives notice to the buyer of the assignments referred to in clause 23.3.
- 23.3. When this clause applies, in addition to any rights of the agent that arise by operation of the law, the parties agree that, subject to clause 23.5 the agent is subrogated to all rights of the vendor under these terms and conditions against the buyer.
- 23.4. The vendor acknowledges that the agent may take enforcement, repossession or other action to recover any livestock for which the buyer has not paid in full, or the Price of such livestock, owing by the buyer under these terms and conditions:
 - (a) when this clause does not apply, as agent of the vendor (including by reselling the livestock); and
 - (b) when this clause applies, on the agent's own behalf exercising the rights of the vendor by subrogation or assignment under these terms and conditions (whether in the vendor's name or not) and, where title to the livestock has not passed to the agent, by selling the livestock as agent of the vendor and without the agent having to account to the vendor for the proceeds of sale.
- 23.5. The agent may at any time, assign, transfer, securitise or otherwise dispose of all or any of its rights under these terms and conditions and any debts created pursuant to it (including, without limitation, the rights assigned to it under clause 23.3).
- 23.6. The vendor hereby irrevocably appoints the agent as the vendor's attorney to:
 - (a) do at any time and in any manner as the agent thinks fit all acts necessary or desirable to perfect or improve the rights and interests afforded, or intended to be afforded, to the agent under these terms and conditions; and
 - (b) appoint one or more sub-attorneys to do anything that the agent may do as the vendor's attorney.
- 23.7. These terms and conditions do not render the agent liable to the buyer as vendor nor entitle the buyer to set off against the agent any right the buyer may have against the vendor or otherwise.
- 23.8. The buyer acknowledges that the provisions of this clause 23 are intended solely for the benefit of the agent (and its assigns) and the vendor. The liabilities and obligations of the buyer will not be in any way affected:
 - (a) by this clause 23, other than as it expressly provides; or
 - (b) by the failure of the agent or the vendor or either of them to comply with the terms of this clause 23.
- 23.9. The buyer must pay all amounts payable to the vendor or the agent under these terms and conditions without any deduction, withholding, set off or counterclaim whatsoever, whether the benefit of a deduction, withholding, set off or counterclaim is alleged to exist in favour of the buyer as against the vendor or the agent in any capacity whatsoever or any other person including any assignor of the vendor's or the buyer's interests under these terms and conditions.
24. (a) The agent agrees that he is liable to pay to the vendor the Price, less such commission as is agreed between the vendor and the agent, and in the absence of any agreement such amount as is reasonable, and less the Fees that are payable by the vendor that were incurred by the agent on behalf of the vendor in relation to the sale of the livestock.
- (b) In the event that the buyer pays the Price or part of it direct to the vendor then the agent has no liability to the vendor for the amount of such payment. Further, if the agent pays the vendor any amount which the buyer also pays direct to the vendor in respect of the same livestock, then the vendor must repay the agent that amount and the agent may debit that amount to an account held in the name of the vendor by the agent.
- (c) Regardless of whether or not a sale has occurred the agent may, but is not under obligation to do so, instead of deducting payments owed to it by the vendor, debit the amount of the commission and fees to an account held in the name of the vendor by the agent.
25. The auctioneer has been retained by the vendor as auctioneer for the purpose of selling the livestock comprised in the lots. The terms of

engagement between the auctioneer and the vendor do not extend to the provision of advice by the auctioneer to the vendor in relation to the safety or otherwise of the sale ring, the saleyards and the surrounding environments.

- (b) The vendor, the agent and the buyer agree to comply with their several duties under the Australian Animal Welfare Standards and Guidelines for the Land Transport of Livestock and further to consign, manage, receive, transport and handle livestock in accordance with any other or additional requirements of animal welfare legislation specific to the jurisdiction in which livestock are consigned, managed, received, transported and handled in the course of the auction process.

CHAPTER THREE - VENDOR WARRANTY FOR CORRECT PRESENTATION AND DECLARATION

26. This chapter applies only in the case of livestock and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the livestock are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells the livestock to a slaughterer. A slaughterer is any person who pays the AMPC Processor levy.
27. The warranty of a vendor is that livestock and their companion animals offered for sale at auction:
 - (a) pass government and other regulatory authority requirements and inspections at the time of slaughter;
 - (b) are of merchantable quality;
 - (c) carry an NLS device in accordance with State law;
 - (d) in the case where a representation has been made in the pre-sale catalogue that the livestock have particular characteristics or are fit for a particular purpose or market, and such representations are based on information in any document, the livestock will have those characteristics or will be fit for the particular purpose or market; and
 - (e) all information in any document provided by the vendor is true, complete and correct in all material respects.
28. In the event of a breach by the vendor of the vendor's warranty and provided such breach is notified by the buyer to the agent by 5:00pm on the 7th day after the fall of the hammer then the buyer is not liable to pay the portion of the Price of such of the vendor's livestock to which the breach applies.
29. However if the breach by the vendor is such that the livestock are not rejected outright but are instead downgraded then the buyer will pay the value of the livestock at their next highest and best use.
30. In the case of a breach by the vendor of the vendor's warranty then the vendor will also be liable to the buyer for any further losses which the buyer might establish but the buyer will take all reasonable steps in co-operation with the agent and vendor to mitigate both the effect of the breach and the amount of any loss.
31. Where a sentinel animal of a lot tests positive for chemical residue, or foreign material contamination and provided such test is certified and notified as required by these vendor warranty terms, then:
 - (a) the buyer will be entitled to delay payment for the price of all livestock in that lot only; or
 - (b) the vendor has the option, at the vendor's cost, of collecting the companion animals, if allowed by law; or of having the livestock slaughtered in which event the risk of further condemnations will be that of the vendor. Where product integrity is potentially jeopardised, the Processor has the right to refuse slaughter and send the livestock back to the consigning property at the vendor's cost.
32. The auctioneer is liable to the buyer in respect of any breach of the vendor's warranty arising out of:
 - (a) any error, by the auctioneer, of transcription of information from the NVD completed by the vendor to the pre-sale catalogue or the buyers post-sale summary;
 - (b) any failure by the auctioneer to notify the buyer, prior to bidding, of any breach by the vendor of the warranty of the vendor if the buyer establishes that the agent knew of such breach prior to the sale; and
 - (c) any failure by the auctioneer to announce prior to bidding, or disclose in the pre-sale catalogue, that the vendor has failed to provide a NVD that is complete in all material aspects.
33. **CHAPTER FOUR - OWNERS RISK FOR CONDITION OF CATTLE**
34. This chapter applies only in the case of cattle and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the cattle are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells cattle to a slaughterer. A slaughterer is any person who pays the AMPC Processor levy.
35. Owners risk reflects the producer's responsibility to provide slaughter cattle for sale that are fit for human consumption. Cattle are fit for human consumption if they are not condemned as unfit by government. Owners risk applies if the condemnation is due to a condition in the animal which the buyer establishes, by the relevant government certificate, existed prior to the fall of the hammer.
36. A buyer with the benefit of owners risk protection is not liable to pay the Price of that animal to the vendor. The buyer remains nevertheless liable for all costs incurred after the fall of the hammer in transport, slaughter, testing and disposal of the animal.
37. Owners risk protection is available to the buyer of cattle to which this chapter applies if all of the following are satisfied:
 - (a) a certificate is issued by government which states the relevant NLS RFID tag number and PIC, the date of the certificate, the reason for condemnation and that the reason for condemnation existed prior to the fall of the hammer;
 - (b) the certificate is received by the selling agent either in its original form or by fax or electronic communication in the form of data, text or imaging by 5:00pm on the 7th day after the fall of the hammer; and
 - (c) if the condemnation is due to chemical residue the certificate follows testing in a government approved laboratory which establishes maximum residue limits in excess of the Australian limit.
38. Owners risk does not apply, and the buyer must pay for the cattle, if the reason for condemnation is any of bruising, fever, partial condemnation or emaciation.
39. **CHAPTER FIVE - NOTICES REQUIRED BY LEGISLATION**
40. NSW Property, Stock and Business Agents Act 2002 Warnings
- Penalties for collusive practices. It is an offence against the Property, Stock and Business Agents Act 2002 for a person to do any of the following as a result of a collusive practice, or to induce or attempt to induce another person by a collusive practice to do any of the following:
 - (i) to abstain from bidding; or
 - (ii) to bid to a limited extent only; or
 - (iii) to do any other act that might prevent free and open competition.
- Severe penalties may be imposed on persons convicted of collusive practices.
- The auctioneer has the right to make one bid on behalf of the vendor if the auctioneer clearly and precisely announces that fact prior to the sale.
- Tasmania Legislation. An auctioneer conducting a public auction must not appear to acknowledge the making of a bid or no bid was made, or the reason for the bid, or collusive practices by way of making or receiving an unlawful promise to abstain from bidding, not to bid except to a limited extent or do any other thing which may prevent free and open competition.
- WA Auction Sales Act 1973 s31 NOTICE. It is an offence to:
 - (i) induce or attempt to induce another person to abstain from bidding by means of a promise, expressed or implied, that the other person will have the right to elect to take over as buyer or to toss or draw lots to establish who is to become the owner;
 - (ii) abstain or agree to abstain from bidding as a result of such a promise;
 - (iii) knowingly enter or permit or cause to be entered in the auctioneer's record any name other than that of the actual successful bidder;
 - (iv) enter in the auctioneer's record the name of the buyer other than that of the actual successful bidder; or
 - (v) in the case of successful bidder supply wrong information as to the name of the buyer to the auctioneer or to any person, firm or corporation on whose behalf the sale is conducted.

The vendor, or any person on behalf of the vendor, or the auctioneer have the right to make no more than three bids.

BULL MANAGEMENT

DISCLAIMER: This extract was taken from the NSW DPI , it provides some useful practices for introducing new bulls into your herd.

Bringing your new bull home.

When you buy a new bull or bulls for your herd, you can reduce problems by getting them home and settling them in properly.

Bulls of all breeds can become upset and excited during the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This combination is often enough to upset even quiet animals.

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when bought. Understanding why bulls become upset, and organising to reduce stress, allows them to settle down quickly.

PURCHASE

Temperament is a major characteristic to check when you buy bulls. Inspect the bulls in the yards or paddock before sale and note any unusual behaviour or activity. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited. A note of this behaviour should be written down in the sale catalogue and referred to during the auction.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Using the yard or paddock behaviour as a guide, rather than the temperament shown in the ring, you can often buy such bulls cheaper, provided they are satisfactory in other respects.

DELIVERY

At auction sales, possession is yours after the fall of the hammer. Continued careful treatment of animals is important. Insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering.

When you buy a bull, ask what health treatments he has received. For example, has he been vaccinated with 5-in-1? How often and when was it done last? Has he been vaccinated for any reproductive diseases like vibriosis, leptospirosis or three-day sickness? Knowing what has been done can reduce any health treatments.

If you take the bull home yourself:

- Treat and handle him quietly at all times – no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly – your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

If you use a professional carrier:

- Make sure the carrier knows which bulls can be mixed together.
- Discuss, with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into NSW (dipping for ticks, for example).

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice. Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice. Horned bulls should be well tipped to allow easier working through yards and races. Plan to give follow-up vaccinations 4–6 weeks later.

Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work much, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MANAGING OLDER HERD BULLS

Older working bulls also need special care and attention before mating starts.

They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability. All bulls to be used must be free-moving, active and in good store condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

All bulls should be drenched, treated for lice and vaccinated with 5-in-1 and for vibriosis, annually. They may need vaccinating against leptospirosis and three-day sickness in some areas.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

OPEN F1 WAGYU CHAMPION

The open F1 class was introduced into the Wagyu Branded Beef competition this year and was aimed at recognizing the power of Fullblood Wagyu genetics combined with optimal genetics of other breeds.

The 2023 class 4 champion was awarded to Tajima by Andrews Meat Industries.

THE WINNING CARCASE WAS SIRED BY
TRENT BRIDGE BULL L189 (TBRFL00189).
A BULL WHICH FEATURES IN THIS CATALOGUE.

This exceptional Open F1 class winner had a staggering MIJ Digital Marbling of 57%, along with class leading Eye Muscle Area of 98cm².
