

Automated hazard detection, real-time alerting, and AI predictive modeling

Kepler51 automatically monitors and responds to threats across your organization. Our system integrates data from any source—sensors, weather systems, security feeds, or third-party APIs—while using AI to predict potential hazards before they occur.

Key benefits

- ◆ Faster escalations, shorter response times
- ◆ Smart automation to eliminate both missed alerts and alert fatigue
- ◆ Customizable to your unique policies and thresholds

Ideal for complex, multi-location operations

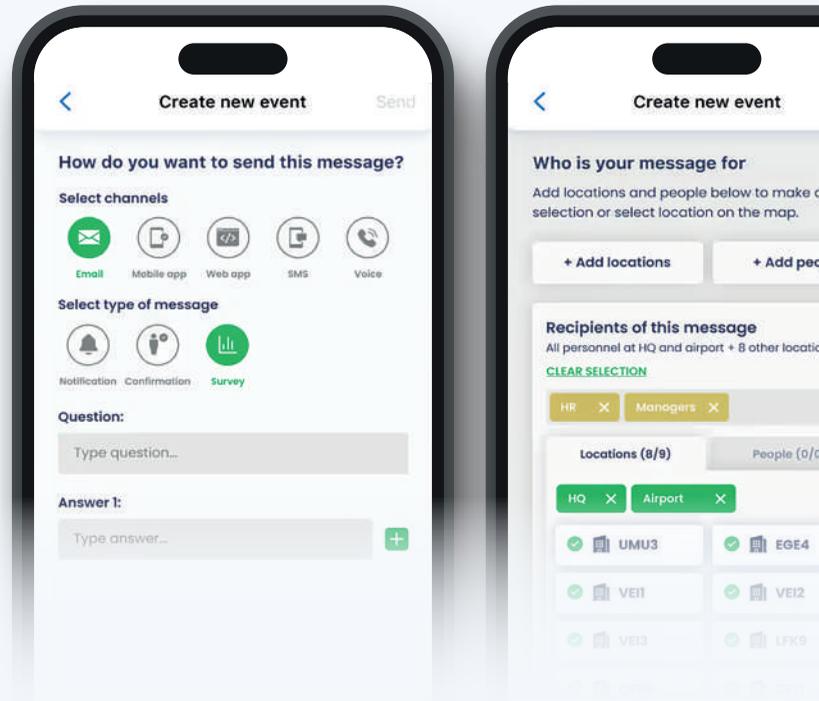

- Construction
- Manufacturing
- Oil, gas and mining
- Logistics
- Utilities
- Higher education
- E-commerce
- Retail

Zero-delay automation for critical moments

Kepler51 automatically triggers critical alerts and initiates emergency communications—eliminating manual processes and human error. When seconds count, our intelligent automation ensures ongoing situational awareness as events are developing, enabling you to respond without delay.

Complete two-way communication, for every employee

The only mass notification provider with comprehensive software and hardware solutions, Kepler51 was designed to reach every employee instantly, regardless of location or personal equipment—including lone worker protection.

TRUSTED BY SAFETY LEADERS ACROSS INDUSTRIES

Why safety leaders choose Kepler51?

Flexibility & customization:

Every facility is different—from office environments to hazardous production floors. Our platform adapts whether you need digital signage for noisy environments or mobile alerts for office workers.

Proven results:

Organizations using Kepler51 report significant reductions in response times, fewer missed alerts, and improved overall safety outcomes across their operations.
