MILESTONES BY WEALTHWAVEONE

Getting into Milestones

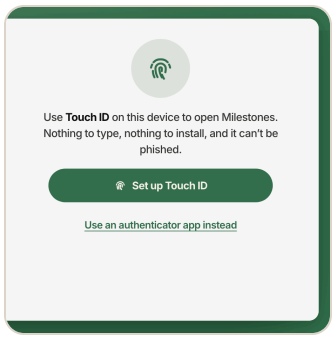

3 steps, about 3 minutes. Do it on a computer, with your phone nearby.

1 Sign in at wealthwaveone.com, then click Milestones

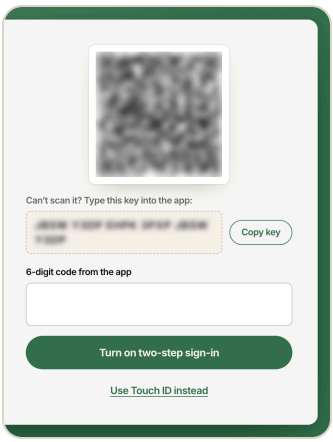

Use your usual WealthWaveONE email and password.

2 Choose how to confirm it's you

Pick **one**. You only do this the first time.

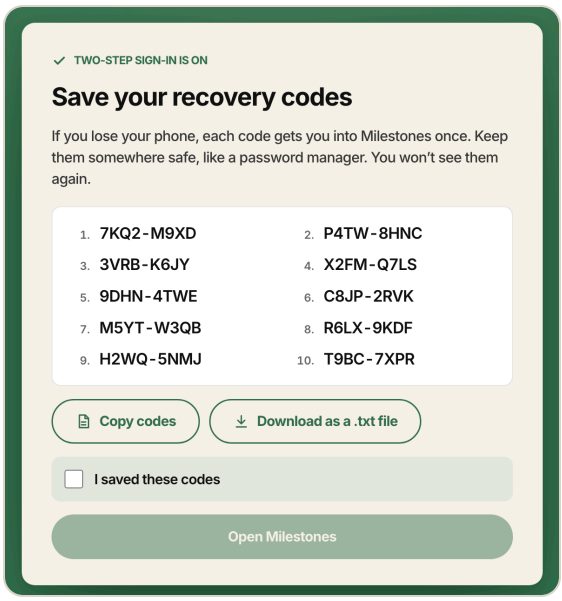

Easiest: click **Set up Touch ID and use your fingerprint or face.**

Or: scan the code with an authenticator app and type the 6 digits.

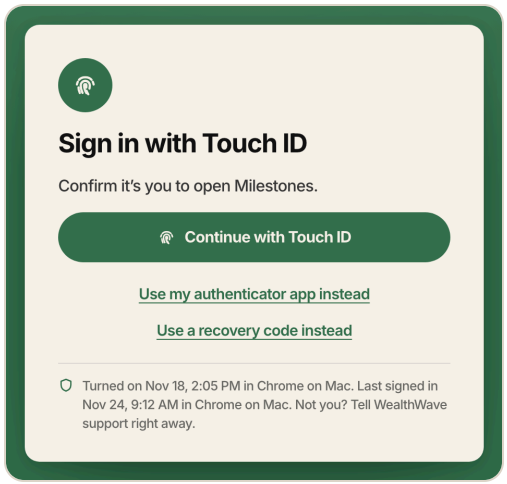

3 Save your recovery codes

They get you in if you lose your phone. Click **Download**, tick the box, then **Open Milestones**.

Next time, just one tap

Touch ID or a code from your app. It asks again after an hour away or when you close your browser.

Stuck?

"This QR code no longer works": setup was started in another tab. Click **Start again here**.

Code refused: use the newest code, and set your phone's time to automatic.

New or lost phone: click **Use a recovery code instead**.

No codes left: contact WealthWave support and we'll call you back to reset it.

Never share your codes. WealthWave will never ask for them.
