# 00. Introduction

# 01.1 – About

The VPAT is provided in four editions based on the standards/guidelines being evaluated. The editions are WCAG, Revised 508, EN 301 549, and International, including all the standards.

This document is based on the WCAG edition of the VPAT. It includes the following standards/guidelines: · Web Content Accessibility Guidelines 2.0 · Web Content Accessibility Guidelines 2.1.

For [more information read ITI web page](#)

**PLEASE NOTE:** While a VPAT can be an essential aid in assessing the availability of ICT products with accessibility features, it is important to note that, even in cases where a product conforms to relevant standards and technical specifications, an end user may still encounter difficulties utilizing it due to the nature or severity of their disability. On the other hand, a product that may not fully conform to all technical requirements may still be perfectly accessible to an end user with a disability but does not need a particular accessibility feature, e.g., a large-button telephone handset for an individual with a hearing disability.

# 01.2 – Test environments

## Operating systems

- Apple Mac Os X (latest version)
- Microsoft Windows (latest version)
- Apple ios (latest version)
- Google Android (latest version)

*We have not used Linux as it is currently very uncommon among users with disabilities.*

## Browsers and user software

In the latest versions available on the different operating systems:

- Google Chrome
- Windows Edge
- Safari
- Adobe Acrobat Reader / Preview on Mac (for PDFs only)

## Screen readers and assistive technologies

To achieve the most standard evaluation **we test everything with no adaptation.**

To make the most realistic evaluation **we also make some adaptations:**

- Graphic adaptations present on the different systems (colors, contrasts, subtitles, etc.)
- Mouse emulations, magnifiers, and screen keyboards or keyboard improved settings always of the different systems
- Voiceover – Apple systems only
- Talkback – Android only
- NVDA (last version) and Freedom Scientific Jaws (second-to-last version) – PC systems only

# Accessibility Conformance Report

## 02.1 – General information

**Company:** magicsschool.ai

**Name of Product/Version:** app.magicsschool.ai

**Report Date:** 12/9/2025

**Product Description:** MagicSchool AI is an educational platform that takes the power of AI and puts it into educators' and students' hands to help them use it productively and responsibly in their respective work.

**Contact Information:** [accessibility@magicsschool.ai](mailto:accessibility@magicsschool.ai)

**Evaluation Methods Used:** (see [05.3 – Methodology](#))

## Terms

The terms used in the Conformance Level information are defined as follows:

- **Supports:** The functionality of the product has at least one method that meets the criterion without known defects or meets with equivalent facilitation.
- **Partially Supports:** Some functionality of the product does not meet the criterion.
- **Does Not Support:** The majority of product functionality does not meet the criterion.
- **Not Applicable:** The criterion is not relevant to the product.
- **Not Evaluated:** The product has not been evaluated against the criterion. This can only be used in WCAG Level AAA criteria.

# 03. WCAG 2.2 Report

**Note:** When reporting on conformance with the WCAG 2.2 Success Criteria, they are scoped for full pages, complete processes, and accessibility-supported ways of using technology as documented in the [WCAG 2.2 Conformance Requirements](#).

## 03.1 – Success Criteria, Level A

Success Criteria	Conformance Level	Remarks and explanations
1.1.1 Non-text Content	Supports	
1.2.1 Audio-only and Video-only (Prerecorded)	Supports	
1.2.2 Captions (Prerecorded)	Supports	
1.2.3 Audio Description or Media Alternative Supports	Supports	
1.3.1 Info and Relationships	Supports	
1.3.2 Meaningful Sequence	Supports	
1.3.3 Sensory Characteristics	Supports	
1.4.1 Use of Color	Partially supports	Exceptions include: Raina chatbot > Edit message > button for

		<p>editing text: Color is used as the only visual means of conveying information. (mitigated by accessibility solution)</p> <p>Reporting &gt; Tool usage and student room usage &gt; graph: Color is used as the only visual means to convey information. (mitigated by accessibility solution)</p>
1.4.2 Audio Control	Supports	
2.1.1 Keyboard	Partially supports	<p>Exceptions include:</p> <p>Reporting &gt; TAB "teacher usage" e "student usage": The element cannot be reached correctly with the keyboard.</p> <p>Reporting &gt; Tooltip: The element is not properly reachable using the keyboard (mitigated by accessibility solution)</p>
2.1.2 No Keyboard Trap	Supports	
2.1.4 Character Key Shortcuts	Supports	
2.2.1 Timing Adjustable	Supports	
2.2.2 Pause Stop Hide	Supports	
2.3.1 Three Flashes or Below Threshold	Supports	
2.4.1 Bypass Blocks	Supports	
2.4.2 Page Titled	Supports	

2.4.3 Focus Order	Partially supports	Exceptions include: - General > Header > menu burger: Once interacted with the interactive element, the focus does not land on the internal items but instead navigates to the next sections.
2.4.4 Link Purpose (In Context)	Supports	
2.5.1 Pointer Gestures	Supports	
2.5.2 Pointer Cancellation	Supports	
2.5.3 Label in Name	Supports	
2.5.4 Motion Actuation	Supports	
3.1.1 Language of Page	Supports	
3.2.1 On Focus	Supports	
3.2.2 On Input	Supports	
3.2.6 Consistent Help	Supports	
3.3.1 Error Identification	Supports	
3.3.2 Labels or Instructions	Partially supports	Exceptions include: Login Page > Input text: The element has no visible label. (mitigated by accessibility solution)

3.3.7 Redundant Entry	Supports	
4.1.1 Parsing	Supports	
4.1.2 Name Role Value	Partially supports	<p>Exceptions include:</p> <ul style="list-style-type: none"> <li>- General &gt; Chatbot &gt; search combobox: The element is not built with the correct programming pattern, which may result in incompatibility with assistive technologies.</li> <li>Reporting &gt; Table: The elements within the table are not interpretable by screen readers.</li> </ul>

## 03.2 – Success Criteria, Level

### AA

Success Criteria	Conformance Level	Remarks and explanations
1.2.4 Captions (Live)	Supports	
1.2.5 Audio Description (Prerecorded)	Supports	
1.3.4 Orientation	Supports	
1.3.5 Identify Input Purpose	Supports	
1.4.3 Contrast	Supports	

(Minimum)		
1.4.4 Resize text	Supports	
1.4.5 Images of Text	Supports	
1.4.10 Reflow	Partially supports	<p>Exceptions include:</p> <ul style="list-style-type: none"> <li>- General &gt; 400% zoom &gt; chatbot: At a screen resolution of 1280 px with 400% zoom (equivalent to a viewport width of 320 CSS pixels), the content does not reflow correctly.</li> <li>Presentation Generator &gt; 400% zoom &gt; Prompt assistant: At a screen resolution of 1280 px with 400% zoom (equivalent to a viewport width of 320 CSS pixels), the content does not reflow correctly.</li> <li>Raina chatbot &gt; 400% zoom &gt; chatbot: At a screen resolution of 1280 px with 400% zoom (equivalent to a viewport width of 320 CSS pixels), the content does not reflow correctly.</li> </ul>
1.4.11 Non-text Contrast	Partially supports	<p>Exceptions include:</p> <p>Presentation Generator &gt; Presentation generator &gt; Export slides &gt; options: The keyboard focus on the element does not exceed the minimum sufficient contrast ratio with the background.</p>
1.4.12 Text-spacing	Supports	
1.4.13 Content on Hover or Focus	Supports	
2.4.5 Multiple Ways	Supports	
2.4.6 Headings and	Supports	

Labels		
2.4.7 Focus Visible	Partially supports	Exceptions include: Raina chatbot > Edit message > code block > button to eliminate: Keyboard focus on the elements is not visible, which can make it difficult for users navigating with the keyboard to understand which element is currently selected.Mitigated by accessibility solution
2.4.11 Focus Not Obscured (Minimum)	Supports	
2.5.7 Dragging Movements	Supports	
2.5.8 Target Size (Minimum)	Supports	
3.1.2 Language of Parts	Supports	
3.2.3 Consistent Navigation	Supports	
3.2.4 Consistent Identification	Supports	
3.3.3 Error Suggestion	Supports	
3.3.4 Error Prevention (LFD)	Supports	
3.3.8 Accessible Authentication (Minimum)	Supports	

4.1.3 Status Messages	Partially supports	Exceptions include: - General > Chatbot > messages: Chat messages are not read dynamically by screen readers.Mitigated by accessibility solution Presentation Generator > Prompt assistant: Chat messages and accepted prompt are not read dynamically by screen readers.

# 06. **Annexes**

# 06.1 – Web accessibility

Disability is defined as any activity limitation or participation restriction in society, experienced by a person as a result of a substantial, lasting, or definitive alteration of one or more physical, sensory, mental, cognitive, or psychic functions, a multiple disability, or a disabling health condition (article L. 114 of the Social Action and Families Code).

Web accessibility consists of making online public communication services accessible to people with disabilities, and is based on four fundamental principles:

**Perceivable:** Information and user interface components must be presented to the user in such a way that they can perceive them. For example, providing textual equivalents for all non-textual content that can then be presented in other forms according to the user's needs: large characters, braille, speech synthesis, symbols, or simplified language.

**Operable:** User interface and navigation components must be operable. For example, making all functionality available via keyboard.

**Understandable:** Information and the use of the user interface must be understandable. Textual content must be made readable and navigation must be consistent.

**Robust:** Content must be sufficiently robust to be reliably interpreted by a wide variety of user agents, including assistive technologies.

# 06.2 – WCAG

## WCAG Overview

The Web Content Accessibility Guidelines, more commonly referred to as WCAG, is a set of guidelines developed with the aim of making web content more accessible to people with disabilities. It is developed by the World Wide Web Consortium (W3C), an international organization that develops open standards to ensure the long-term growth of the Web. The W3C's Web Accessibility Initiative (WAI) specifically handles the development and management of the WCAG.

The WCAG guidelines are globally recognized and adopted as the standard for digital accessibility. They have undergone multiple revisions since the release of WCAG 1.0 in 1999, with WCAG 2.0 being published in 2008, WCAG 2.1 in 2018, and WCAG 2.2 in 2023. These updates aim to account for changes in technology and a better understanding of different accessibility needs.

## Levels of Conformance

The WCAG guidelines are divided into three levels of conformance: A (lowest), AA (midrange), and AAA (highest). Each level has specific criteria that must be satisfied to achieve that level of conformance. The guidelines are designed this way to meet the needs of different individuals and situations, with Level A addressing the most severe and limiting accessibility issues, and Level AAA addressing more comprehensive accessibility considerations.

It's important to remember that while WCAG is an excellent guideline and standard, achieving 100% compliance with WCAG does not necessarily mean a website is completely accessible to all users. It's crucial to complement these guidelines with user testing and continual reassessment of your site's accessibility needs.

## Accessibility web page

An accessibility page on a website is a place where website owners can detail the measures they have taken to make their website accessible to individuals with disabilities. This is a best practice in web design and development to enhance digital accessibility. Here are a few components you might often find on an accessibility page:

- **Commitment Statement:** This is a formal statement where the business or organization expresses its commitment to digital accessibility.
- **Standards Compliance:** This is where the website indicates the accessibility standards it adheres to, such as WCAG 2.1 Level AA. This may also include information about how the site has been tested for compliance with these standards.
- **Accessibility Features:** A rundown of the main accessibility features of the site, such as keyboard shortcuts, text size options, color contrast options, etc.
- **Instructions for Using Accessibility Features:** Detailed instructions on how to use the site's accessibility features, like how to turn on captions or use keyboard navigation.
- **Contact and Feedback:** Information on how to contact the website team to report accessibility issues, request accommodations, or provide feedback on the site's accessibility.
- **Update and Revision Date:** The date of the last update to the accessibility page or compliance information.

It's important to remember that the presence of an accessibility page doesn't guarantee in itself that the site is accessible, but it's an indicator of the company's commitment to digital accessibility.

# 06.3 – Methodology

## Objective manual and semi-automatic verification methodology

We analyze content with different automatic and semiautomatic systems and compare the results between tools to obtain the most complete and objective verification. The reference standard, unless specifically requested, that we use is always the latest (WCAG 2.2) so that we can ensure compliance in all countries from which the touchpoint (site, app, etc.) can be accessed.

Our verification is therefore compliant with WCAG 2.2 level AA, and the requirements in [UNI EN 301549 Guidelines](#) or their declination in the French RGAA's. Each tool produces results that are then analyzed by our experts: it is, therefore, possible that not all tool results appear because they are judged to be false negatives.

## Automated tools for syntax checking

- **W3C Markup Validation Service:** used with generated code, because it is the official tool for checking HTML, XHTML, MathHTML, etc. <https://validator.w3.org/>
- **W3C CSS Validation service:** although the correctness of the CSS does not affect accessibility, it could affect some aspects that still have an impact on it if not correctly interpreted because it is incorrect. The verification is therefore appropriate and done with <https://jigsaw.w3.org/css-validator/>
- **PAC PDF checker:** <https://pdfua.foundation/en/pdf-accessibility-checker-pac/>

## Automatic and semi-automatic tools for color verification

- **Color Contrast Analyser (CCA):** used punctually on dubious contrasts <https://developer.paciellogroup.com/resources/contrastanalyser/>
- **WCAG Color contrast checker:** used as the first check to verify the contrasts of the colors used in the CSS of the pages.

- **Text on background image a11y check:** used to check when text should overlap images <https://www.brandwood.com/a11y/>
- **Color contrast accessibility evaluator:** used as an additional control for some online pages <https://color.a11y.com/Contrast/>

## Automatic and semi-automatic tools for checking accessibility

Some online validators used as samples on the pages:

- Accescan <https://accessibe.com/accessscan>
- Wave <https://wave.webaim.org/>

### And other local tools:

- **Web developer toolbar:** Used to support manual verification. It allowed us to locate images without alt texts, fields without labels, etc. <https://chrispederick.com/work/web-developer/>
- **AXE e Lighthouse for Chrome:** they have provided us with precise indications on the defects of the accessibility of the HTML code but also on WAI ARIA attributes, fundamental in the case of web applications and interactive components.
- **Siteimprove for Chrome:** like AX, it provides useful indications for verifying compliance but is a tool evaluated by AgID as useful for monitoring public sites.

## Terms

The terms used in the Conformance Level information are defined as follows:

**Supports:** The functionality of the product has at least one method that meets the criterion without known defects or meets with equivalent facilitation.

**Partially Supports:** Some functionality of the product does not meet the criterion.

**Does Not Support:** The majority of product functionality does not meet the criterion.

**Not Applicable:** The criterion is not relevant to the product.

**Not Evaluated:** The product has not been evaluated against the criterion. This can only be used in WCAG Level AAA criteria.

## Compliance levels

To meet the needs of various groups and different contexts, three levels of compliance have been defined: A (lowest), AA, and AAA (highest).

**Level A Criterion:** Minimum level. Impacts the experience of a wide range of users / often requires simple implementation techniques.

**Level AA Criterion:** Improved accessibility level. Impacts a smaller group of users / may require more specific implementation techniques.

**Level AAA Criterion:** Maximum level of accessibility, suitable only for certain contexts.
