Mini-conferences

Chernivtsi IT Cluster organizes mini-conferences within its communities. These are events where top specialists from all over Ukraine gather to exchange knowledge and experience.

Our events create an ideal space for professional development, where participants can gain new practical knowledge, find like-minded people and expand their professional network. Each conference is aimed at solving current problems of the industry.

IT BREAKFAST

IT breakfast is one of our tastiest projects. Over a glass of coffee and delicacies, in a cozy atmosphere, our guests can enjoy an interesting lecture on current and interesting topics from guest speakers.

Every month, in a cozy place, we organize an IT breakfast where we gather about 60 listeners. Each time there is a new speaker, a new topic, so by joining the IT breakfast from the Chernivtsi IT-Cluster, you will learn more and more about the IT world and will be able to discuss issues that interest you with like-minded people.

LECTURES "FIND YOURSELF IN IT INDUSTRY"

Understanding the difficulty of starting a career in the IT industry, the team of the Chernivtsi IT Cluster decided to show all the paths along which you can start your career in IT at the "Find Yourself In IT Industry" lectures for students of 1-2 years.

At the lectures, we talk about:

- Current professions in the IT market;
- Advantages and disadvantages of working in IT;
- Why working in IT is cool;
- How to get into an IT company;
- Where to start your career.

IT KICKSTART

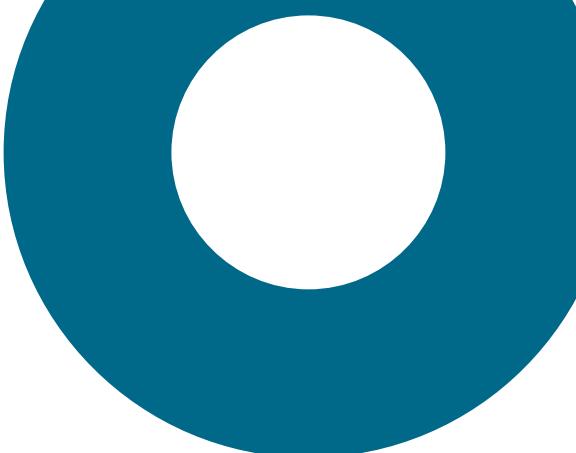

IT KickStart is an event created to help students find the easiest way to start a career in IT.

We show real IT, break all stereotypes about programming, introduce you to the place of future work and convince you that IT is just for you.

At the event, we demonstrate:

- A lecture about what IT is and how to dive into it;
- Real success stories from employees of well-known IT companies;
- An opportunity to meet representatives of IT companies in Chernivtsi;

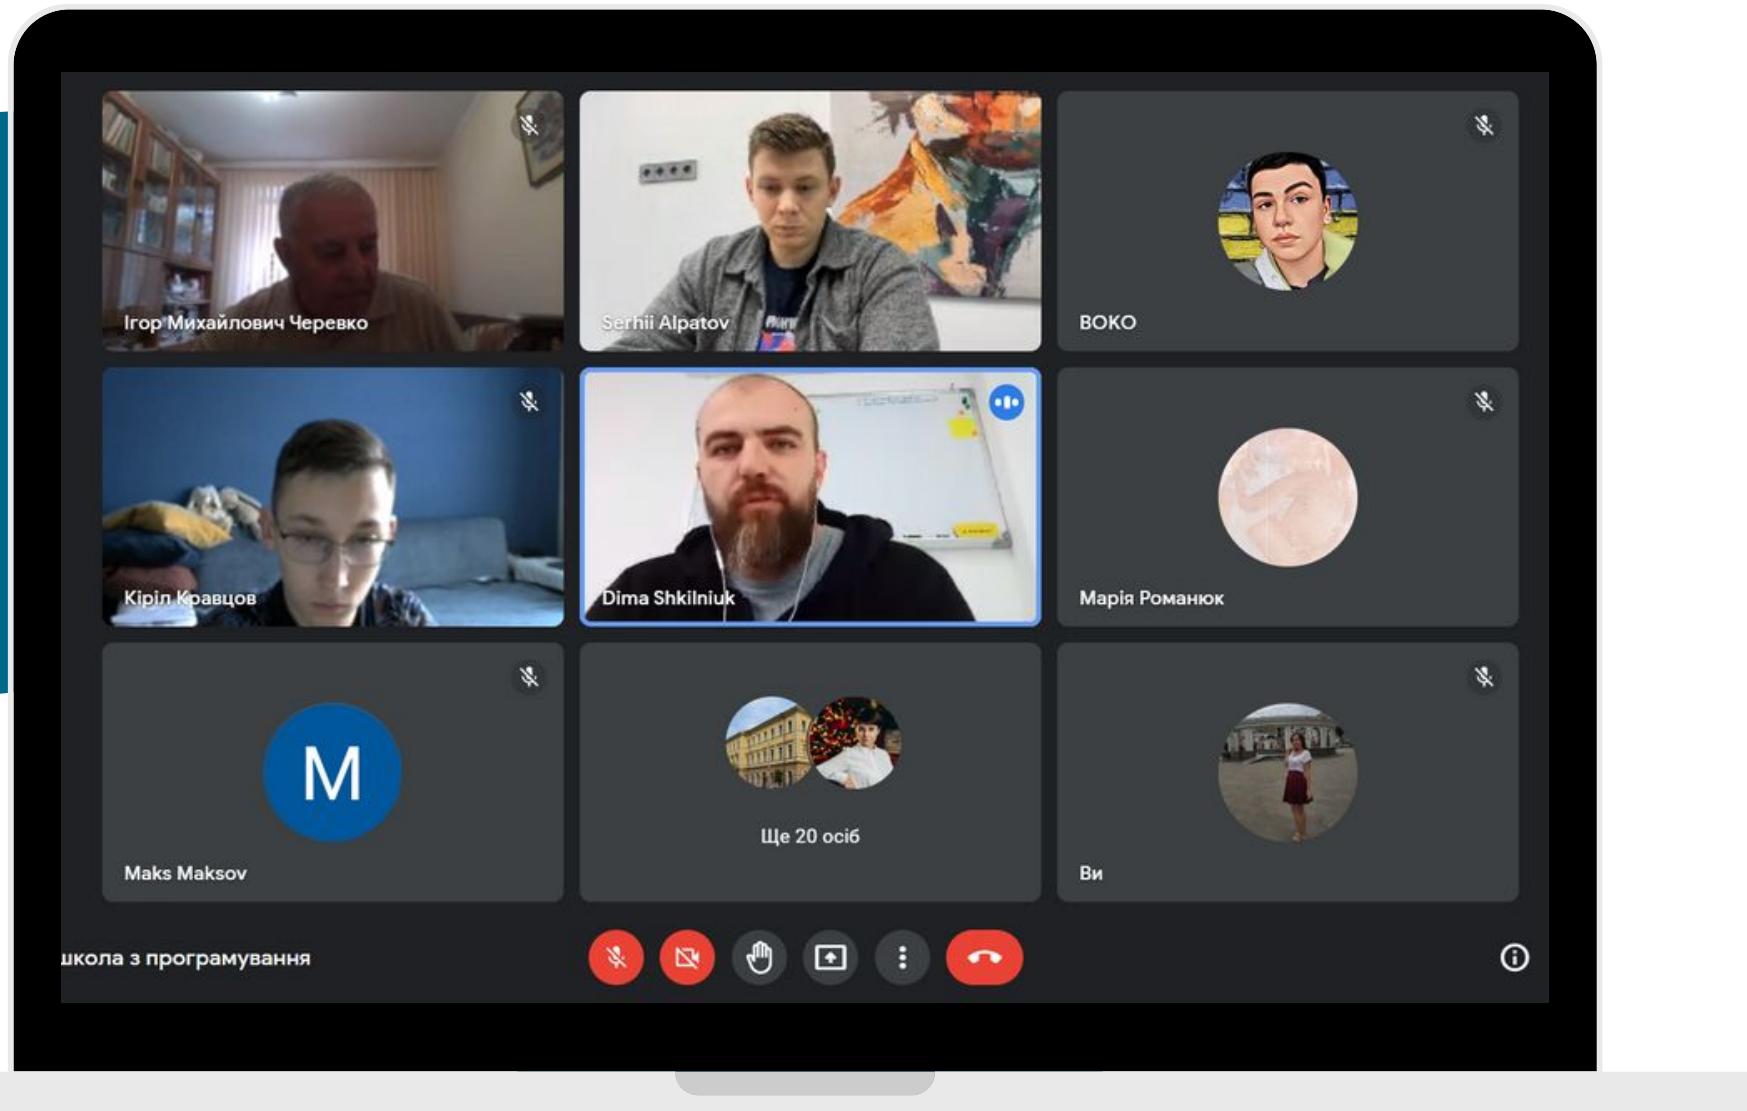

ONLINE PROGRAMMING SCHOOL

Chernivtsi IT Cluster, together with the Department of Mathematical Modeling of Chernivtsi National University, launched a new project for students of schools in our city and region: Online School of Programming.

Anyone can join the Online School and gain important knowledge for starting a career in IT. Already in the first lesson, students have gained a basic understanding of how the Python language works and will write their first lines of code during homework.

VR WORKSHOPS

The development of the IT industry in Ukraine opens up more and more areas and opportunities for young specialists, which students may not even suspect. The "VR Workshops" project was created to dispel stereotypes about working in IT and popularize the field of "Game Development" among students.

"Game development" is a promising direction for starting a career in the IT industry. Many students spend their free time playing computer games, but do not know or have not thought about combining their hobby with their future career. We, together with our partners Computer Academy "RedMonkey", want to popularize this opportunity for students, opening a way for them to work in IT.

PORTAL FOR APPLICANTS

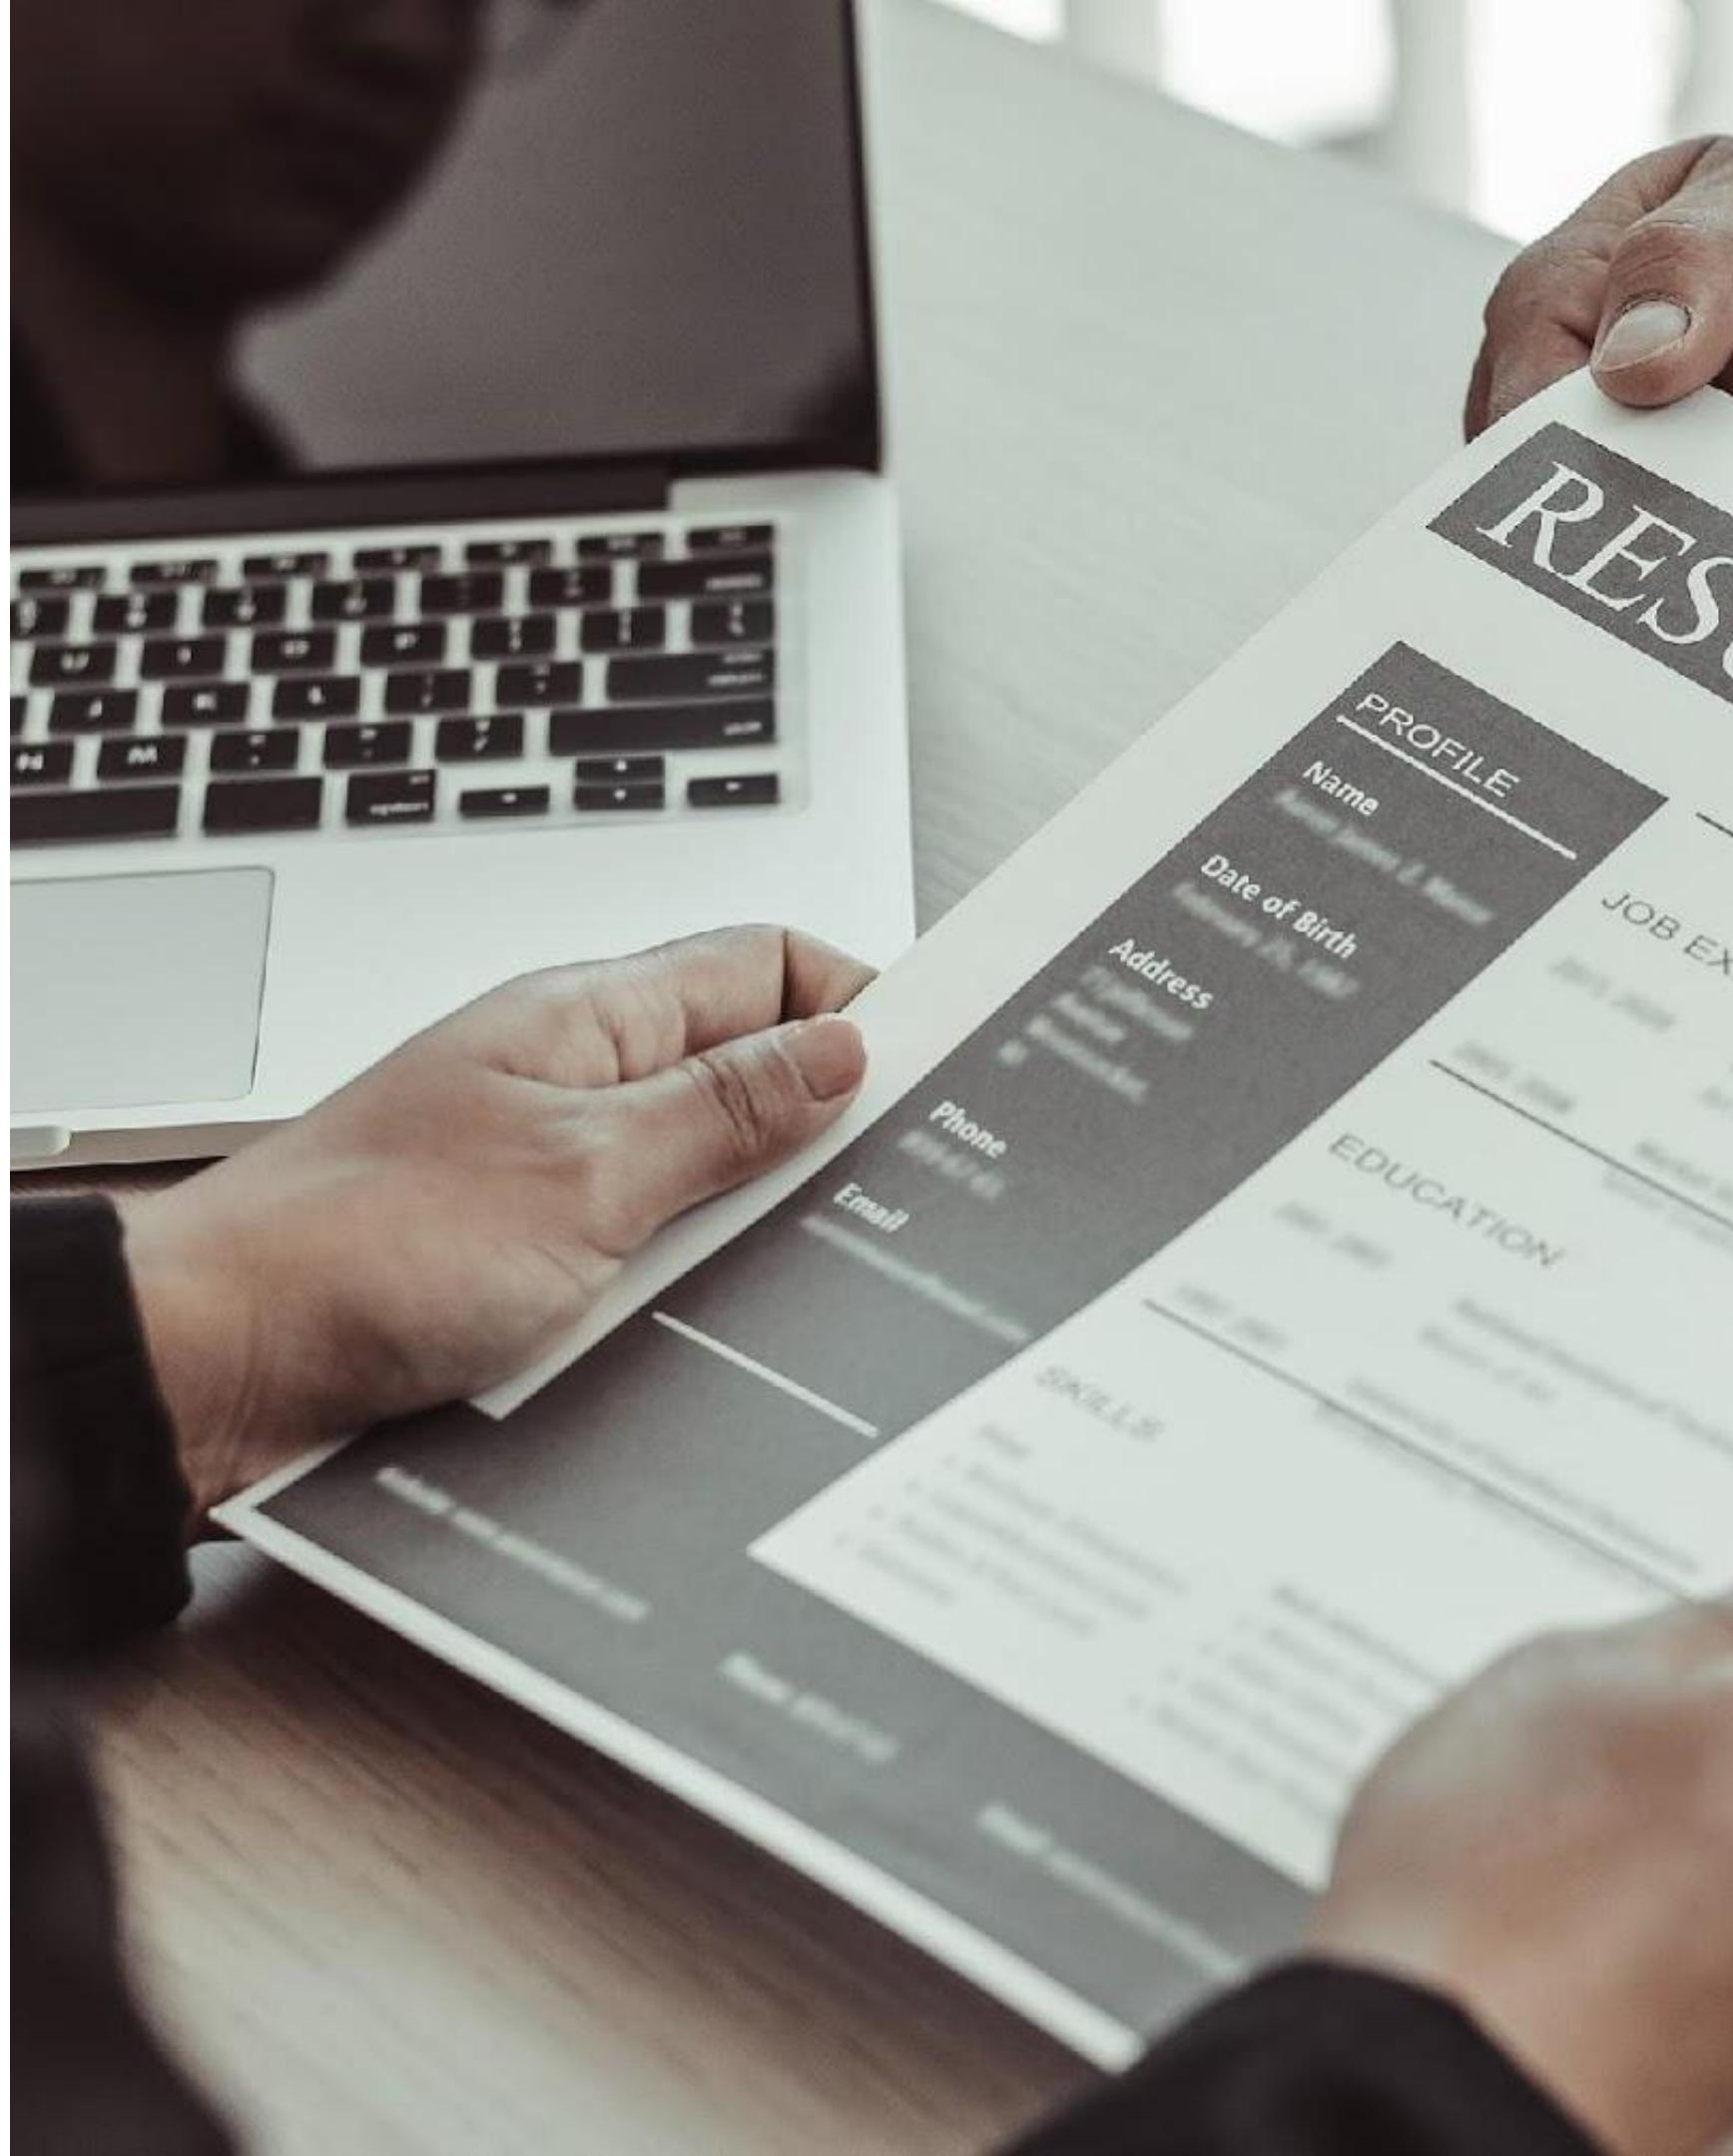

Admission to the university is a difficult and worrying process, because at school students are not yet completely sure of the correctness of their choice. Difficulties also arise with the search for information about possible areas of further work after completing a certain specialty.

The portal from the Chernivtsi IT Cluster will help facilitate this process by structuring the IT specialties of the Chernivtsi National University according to the professional areas studied there.

IT PRACTICE

- This is an opportunity for students to gain hands-on experience and see how a real working environment in the IT industry works. During production practice, students will have the opportunity to work side by side with a team of professionals who have many years of experience in the IT industry. Students will be involved in real projects where they can apply their skills and abilities, receive feedback and develop their professional skills. During industrial practice, students will have the opportunity to:
- Familiarize yourself with various aspects of work in the IT company;
- Do real tasks on real projects;
- Work in a team with professionals in the IT industry.

MICRO INTERNSHIP

Internship of teachers in cluster companies:

SoftSrve, Epam, Sigma software and others.

In the future, in order to receive the recommendation and support of the educational program by the IT cluster, at least 50% of the disciplines of the professional direction must be provided by teachers who either work in IT cluster companies or have completed an internship program in this direction in one of the Cluster companies.

Cooperation with government

- Participation in commissions of small and medium-sized businesses
- Student city
- Digitization of city services
- Startup ecosystem
- Applicant portal
- IT infrastructure
