

Make sleep health a growth opportunity for your pharmacy

Your pharmacy already sees people managing blood pressure, diabetes, weight, fatigue, and poor sleep. That makes it a natural place for visitors to begin a sleep-health conversation.

38.5%

OF PARTICIPANTS WERE AT HIGH RISK FOR OBSTRUCTIVE SLEEP APNEA

22 Italian pharmacies | Berlin Questionnaire | Frontiers, 2025

FaceX makes the first step simple

Early risk awareness, not a diagnosis

- 1 Scan**
A visitor scans the pharmacy QR code.
- 2 Complete FaceX**
A selfie and a few sleep-health questions.
- 3 See the next step**
Guidance toward provider-led evaluation.

Put it where people notice it

FaceX can be visible across everyday pharmacy touchpoints.

- Rx pickup counter
- Waiting area
- Pharmacy checkout
- Consultation area
- Relevant aisles
- Bags and inserts
- Digital displays
- Patient outreach

What pharmacy owners want to know

- Does staff need to run it?**
No. Visitors scan and complete FaceX independently on their own phones.
- What happens next?**
Appropriate visitors can be guided to a qualified provider for further evaluation.
- Where is the growth opportunity?**
Your pharmacy can stay connected to prescriptions, clinical services, sleep-support products, oral appliance pathways, adherence, PAP resupply, or trusted partners.
- Would we need to manage every therapy?**
Not at all. Your pharmacy can choose the services that fit its operation and route others to preferred providers or DME partners.

Your pharmacy starts the conversation and stays connected
