

Partner Smarter. Sell Safer. Win Bigger.

Add unique value, increase margins, and grow trust with every deployment.

Secure the Future. Grow Your Business.

Offer a disruptive cybersecurity solution that protects what others can't and win big doing it.

In a threat landscape where cyberattacks have become more frequent, more sophisticated, and more disruptive than ever, Goldilock Security offers a revolutionary approach: physically disconnecting critical systems from all networks when they're not in use or under threat. Traditional software defences can only go so far, Goldilock goes beyond, delivering hardware-enforced, out-of-band protection that renders digital assets completely invisible to attackers.

Born from a NATO innovation program, Goldilock's flagship solution, FireBreak™, is already trusted and trialled by banks, utilities, transport operators, and hospitals across Europe. Now, it's ready to scale through a growing network of forward-thinking technology partners.

Partner Smarter. Sell Safer. Win Bigger.

The FireBreak™ Solution: Physical Disconnection, Digital Invisibility

FireBreak™ is a patented physical connection controller that enables the instant, remote, and verifiable isolation of any digital asset; servers, networks, backups, control systems, or data repositories, from the internet or other networks. Unlike conventional cybersecurity tools that rely on digital protocols and software rules, FireBreak™ removes the attack surface entirely by eliminating the connection itself.

- **Revolutionary Hardware Protection:** FireBreak is a NATO-born, UK-manufactured solution trusted by banks, utilities, transport operators, and hospitals across Europe. It provides hardware-enforced, out-of-band isolation-removing the attack surface entirely, not just reducing it.
- **Instant, Verifiable Disconnection:** Remotely and securely isolate any server, network, backup, or control system at the touch of a button. No IP addresses, no software agents, no latency-just absolute control and peace of mind.
- **Un-hackable, Out-of-Band Control:** Activate disconnection via secure SMS, satellite, API, or physical buttons. Commands never traverse the internet, eliminating remote compromise risk.
- **Compliance-Ready:** FireBreak supports NIS2, Zero Trust, FIPS 203/204, and data sovereignty mandates, ensuring partners can address the most demanding regulatory environments.
- **Zero Downtime, Maximum Flexibility:** Physical isolation is instant and transparent-no impact on performance, no forklift upgrades, and compatible with any network or device.

Capitalise on Unbreakable Security: Become a Goldilock FireBreak Partner and Stand Out

In a sea of cybersecurity resellers offering similar software-based solutions, how can you truly differentiate yourself and capture the attention of clients demanding the highest level of protection? The answer is Goldilock FireBreak - a fundamentally different approach to network security that offers your business an unparalleled competitive edge.

The Uniqueness of FireBreak™: Offering What Others Can't

FireBreak isn't just another layer of software; it's a groundbreaking and distinct method of network security. While others offer logical segmentation and software-defined perimeters, FireBreak delivers a true, on-demand physical air gap. This means that when activated, critical assets are completely disconnected from the network at the hardware level, rendering them absolutely invisible and inaccessible to cyber threats.

Think of it this way: traditional security is like building stronger walls and installing more sophisticated locks on a house that's still connected to the outside world. FireBreak is like physically moving the most valuable assets into an entirely separate, impenetrable vault that can only be accessed when explicitly needed.

Partner Smarter. Sell Safer. Win Bigger.

This core difference translates into tangible benefits that no other reseller can offer with conventional solutions:

- **Beyond Software Limitations:** FireBreak bypasses the inherent vulnerabilities of software-based security, which can be exploited by sophisticated attacks and zero-day threats.
- **Unmatched Resilience:** Unlike solutions that can be compromised during an active attack, FireBreak remains operable and tamper-evident, providing an unwavering last line of defence.
- **The Power of Physical Disconnect:** Offering a genuine air gap provides a level of security that logical segmentation simply cannot achieve. Assets are not just made harder to reach; they are made impossible to reach when disconnected.
- **Seamless Integration via API:** FireBreak features a robust Application Programming Interface (API), enabling seamless integration and orchestration with your clients' existing cybersecurity infrastructure. This allows for true solutions selling, where you can combine FireBreak's unique hardware-enforced isolation with other best-of-breed tools for enhanced threat detection, incident response, and overall security posture management.

Your Differentiation: Become the Provider of Unbreachable Security

By partnering with Goldilock, you're not just adding another product to your portfolio; you're gaining the ability to offer a unique and compelling solution that immediately sets you apart from the competition.

Here's how FireBreak™ empowers your differentiation:

- **Offer a Truly Novel Solution:** In a market saturated with firewalls, endpoint detection, and SIEM systems, FireBreak offers a radically different value proposition. You become the go-to provider for clients who understand the limitations of traditional security and demand absolute protection.
- **Address Unmet Needs:** Many high-risk organisations in sectors like defence, healthcare, and finance are actively seeking solutions that go beyond software-based defences. FireBreak directly addresses this need, allowing you to tap into a market segment hungry for innovation.
- **Command Premium Positioning:** Offering a patented, first-to-market technology allows you to move beyond price competition and position yourself as a provider of premium, mission-critical security solutions.
- **Enable Comprehensive Solutions via API:** Leverage FireBreak's API to create tightly integrated security packages. For example, trigger an automated FireBreak disconnect in response to threat intelligence alerts from a SIEM, or orchestrate secure, offline backups managed by your existing data protection tools. This solution-centric approach delivers greater value and stickiness with your clients.

Partner Smarter. Sell Safer. Win Bigger.

- **Become a Trusted Advisor:** By offering a truly unique and effective solution, especially one that integrates seamlessly with their existing investments, you build stronger trust and credibility with your clients, solidifying long-term relationships.

The Bottom Line for Your Business

Don't get lost in the noise of a crowded cybersecurity market. Partnering with Goldilock and offering FireBreak™ provides you with a distinct and powerful advantage. You'll be able to offer a level of security that your competitors simply cannot match, especially with the added value of seamless integration through its API, positioning your business as a leader in providing unbreachable protection for the most critical assets within a holistic security framework.

Stand out. Secure the future. Deliver comprehensive solutions. Partner with Goldilock FireBreak™. Contact us today to explore how this game-changing technology can transform your business.
