

## SOLUTION BRIEF

# Nozomi Networks Managed Services from Intelligent Buildings

## Comprehensive Advisory Services and Cybersecurity for Smart Buildings Worldwide

Intelligent Buildings, LLC is uniquely positioned in the market as one of the first Managed Security Services Partners (MSSP) to offer the Nozomi Networks platform as one of its core cybersecurity services. Intelligent Buildings' managed service framework offers easy, fast, secure and cloud-based connection to building systems. Their Nozomi Networks-powered service provides device inventory and cybersecurity vulnerability monitoring across real estate portfolios.

Building control systems, such as HVAC, elevator, lighting, access, and parking are rife with network-connected devices, which are often unknown and unmanaged. These vendor-installed devices increase a portfolio's cyber risk surface and are exposing building owners to security breaches, loss of productivity, expensive repairs, brand damage, and even life-safety issues.

Intelligent Buildings provides a comprehensive, centralized approach across real estate asset classes. Their customers are driven to ensure business continuity and tenant occupancy, and to close insurance and liability gaps that pose significant cost and business risk.

Using the Nozomi Networks platform, Intelligent Buildings identifies and blocks cyber threats from across the globe attempting to infiltrate to their customers' secured systems and networks. They actively protect thousands of assets in every technology class and monitor industrial, operational, and information technology communication protocols. They have detected thousands of software and operating system vulnerabilities. Intelligent Buildings' insights allow them to quickly inform customers of suspicious activity to ensure speedy and appropriate resolution.

## Comprehensive Intelligent Buildings Security Services

### Secure Remote Access

Zero Trust, software-defined networks for remote access

### Inventory and Threat Monitoring

Delivered by Nozomi Networks

### Backup and Antivirus

Secure, centralized data backup and antivirus

### Contractor Audits

Validating system configurations and contractor compliance

### Technician Phishing

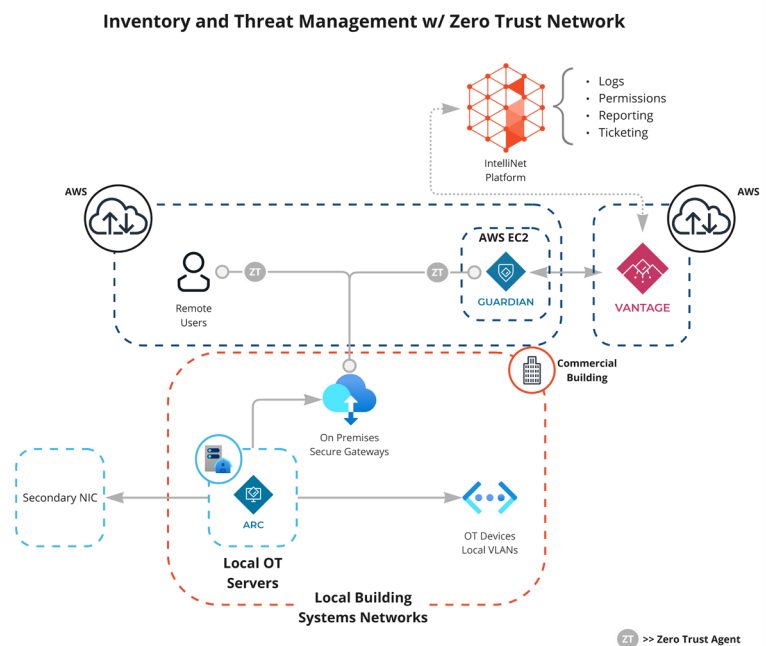

Custom campaigns for technicians with automated training

# How Nozomi Networks, AWS and Intelligent Buildings Work Together

Intelligent Buildings offers comprehensive smart building advisory, assessment, and IntelliNet services, including secure remote access, system resiliency, technology inventory, threat management, and network services for commercial buildings. They rely on Nozomi Networks to deliver ongoing device inventory, device and traffic monitoring, notification of malware threats and system vulnerability analysis. The key to success for Intelligent Buildings is to rapidly scale into buildings that have fragmented networks and do it across building portfolios quickly—and the AWS platform enables Intelligent Buildings to deliver its services without hardware constraints in buildings securely. With AWS cloud services, Intelligence Buildings can automate many elements of deployment and management to provide cost-effective visibility into the rapidly growing property technology environment.

The Nozomi **Vantage™** cloud-hosted platform is ideally suited for MSSP providers offering centralized cybersecurity services across clients, tenants, or smart building services. Using cloud-based Guardian sensors, Nozomi Networks tracks asset vulnerabilities, monitors traffic anomalies, and provides necessary forensic tools and reports to remediate potential threats quickly. As an example of the scale and visibility the powerful combination of Intelligent Buildings'

IntelliNet Service, the Nozomi Networks Vantage and the AWS platform in action, Intelligent Buildings deployed its IntelliNet services in 50 buildings over a single afternoon. The customer immediately gained visibility into their operational technology that they never had before, reducing cyber risk, driving better maintenance practices, and supporting capital planning.

## About Intelligent Buildings

Intelligent Buildings® helps our customers manage risk, enhance well-being, and improve performance by providing unmatched expertise, practical recommendations, and targeted services. Since 2004, we are the most trusted and experienced name in Smart Building services.

Nozomi Networks protects the world's critical infrastructure from cyber threats. Our platform uniquely combines network and endpoint visibility, threat detection, and AI-powered analysis for faster, more effective incident response. Customers rely on us to minimize risk and complexity while maximizing operational resilience.
