Working height	Customer specified
Safe working load	1000kg
Machine mass	1000kg
Operational noise	50db
Operating temperature	0 - 40°C
Electrical requirement	400V 10A 3Ph

* Specifications & design are subject to change, please confirm details when placing your order.

OVERVIEW

The Chain Conveyor is used to transport frames from the framer to the dispatch area. This allows final assembly of door and window components into frames, eliminating manual handling of heavy frames.

FEATURES

- Automatically conveys assembled wall frames within your wall line
- Low speed drive allows drive to continue running
- Emergency stops (E-stops) fitted every 4000mm on 1 side only, can be customised to suit factory requirements

OPTIONS

- Can be custom built to individual factory requirements
- 3 rail Chain Conveyor available for larger frames - 4800mm and 6000mm frames
