Operational noise	50db
Operating temperature	0 - 40°C
Electrical requirement	400V 10A 3Ph

* Specifications & design are subject to change, please confirm details when placing your order.

OVERVIEW

The Wall Stacker Outfeed is designed as a station to accumulate finished frames as a bundle/stack, then convey the bundle over the forklift pockets for loading.

FEATURES

- Reversible drive to centering position of finished stack of frames when ready for lifting with forklift
- Guide rails prevent forks from catching under conveyors

OPTIONS

- Can be custom built to individual factory requirements
