\* Specifications & design are subject to change, please confirm details when placing your order.

## OVERVIEW

The Wall Extruder Outfeed is used to support wall frames as they exit the Wall Extruder or Raked Wall Extruder, to final assembly area.

## FEATURES

- No power required
- Supports frames as they are progressed through the Wall Extruder or Raked Wall Extruder keeping level and true to the framer
- Allows frames to roll down once cleared of the framer to stacking or finishing area, with no powered drives or sequencing required

## OPTIONS

- Can be custom built to individual factory requirements
