* Specifications & design are subject to change, please confirm details when placing your order.

OVERVIEW

The Wall Extruder Outfeed is used to support wall frames as they exit the Wall Extruder or Raked Wall Extruder, to final assembly area.

FEATURES

- No power required
- Supports frames as they are progressed through the Wall Extruder or Raked Wall Extruder keeping level and true to the framer
- Allows frames to roll down once cleared of the framer to stacking or finishing area, with no powered drives or sequencing required

OPTIONS

- Can be custom built to individual factory requirements
