MANAGEMENT, LLC

Main Management Active Sector Rotation *22-Year Strategy Track Record*

How Active Sector Rotation Works

The Main Management Active Sector Rotation is managed from the top-down in a tax-aware manner – using primarily passive sector and industry-based ETFs – paired with a bottom-up approach by focusing on fundamentals, valuations, and industry trends.

START: FUNDAMENTALS

The first step of the investment process is to identify sector, industry, and sub-industry ETFs that appear undervalued relative to history and the rest of the market based on valuation and growth metrics.

NEXT: CATALYSTS

The second step is to identify an appropriate catalyst or macroeconomic trend that may help close that valuation discount and lead to price appreciation. It also has the ability to tactically write covered calls on a portion of the portfolio with the goal of potential additional income.

Where It Fits

- A core, diversified equity holding within a portfolio
- Maintains market exposure with tilts towards favorable sectors & industries

CURRENT OVERWEIGHTS

COMMS. SERVICES

Discounted valuations relative to history and offers a mix of growth at a reasonable price led by the large-cap tech companies and relative value found in the more defensive telecom providers.*

INFO TECH

Strong earnings and revenue growth forecasts imply potential for price appreciation, driven in part by the semiconductor space which is seeing very strong growth and consistent demand.*

CONSUMER DISCRETIONARY

Market weight the broad sector, with a satellite position in homebuilders. Trading at favorable valuations with stronger earnings growth, which investors will pay up for in a below-trend GDP environment.*

HEALTHCARE

Exposure to both defensive services/insurance/pharma companies as well as the risk-on biotech/medical devices. This sector offers defensive characteristics as the forward outlook of the economy remains uncertain.*

**All valuation metrics per FactSet Data*

Main Management, LLC ("Main Management", or the "firm") is an investment adviser registered under the Investment Advisers Act of 1940. The firm was founded in 2002 and provides investment management services primarily to high net worth, family groups, foundations/endowments, and serves as a sub-advisor to third-party investment advisors & broker-dealers. The information contained herein was prepared using sources that the firm believes are reliable, but the firm does not guarantee its accuracy. Source: Morningstar Direct, Main Management

The correction that started in March continued through the first week of April, with markets selling off even more heading into Liberation Day. When all was said and done, the S&P 500 fell nearly 20% from the peak back in February through the bottom on April 8. President Trump seemingly righted the ship he had torpedoed by announcing trade deals with China and the United Kingdom. That saw risk-on sentiment move back into the driver's seat for basically the rest of the quarter and brought the S&P 500 back into positive territory on a YTD basis. The Active Strategy took advantage of the risk-on sentiment, outperforming the market in Q2 on the backs of two of its overweight positions in Information Technology and Communication Services and is now basically in line with the S&P 500 through Q2.

As tariff talk has waned, the economy continues to move forward. The FOMC kept rates unchanged at its June meeting as expected. Although the Fed did not change its stance, the committee is showing signs of bifurcation, with several members favoring zero cuts this year and others two cuts. For the time being, the median dot on the dot plot says two cuts this year. The Summary of Economic Projections was a bit more hawkish than in March, showing lower growth forecasts and higher inflation expectations. Nonetheless, current data points indicate that the labor market and inflation figures are supportive of current policy. The Q1 and Q2 GDP figures have been skewed by the import and export figures, which responded in a big way to the tariff announcements and were the cause of the negative Q1 GDP reading. Q2 is forecasted to rebound to somewhere between 2-4% and the reality for the 1st half of the year likely lies somewhere between 1-2% growth across both quarters.

Coming off the market bottom in early April, Growth handily led the way over Value for the rest of Q2 after trailing in Q1. On a size basis, large-caps were again the pick of the bunch, followed by small-caps, and then mid-caps. The top performing sectors were Information Technology and Communication Services, while Energy and Healthcare, which were the top 2 sectors in Q1, fell to the bottom of the pile in Q2. As we have since inception back

MAIN
MANAGEMENT, LLC

in 2002, we run the Active Strategy in a tax-aware manner, so it may provide an appealing solution for non-qualified money, in addition to qualified money, and the Active may be used for core or satellite US equity exposure within a client's portfolio.

During the quarter, we sold our exposure to mid-cap growth and Biotechnology and used the proceeds to add to our existing positions in broader Financials, Healthcare, Consumer Discretionary, as well as initiating a new position in Homebuilders. Healthcare was the worst performer in the portfolio after being one of the best in Q1. The best performers were our positions in the thematic space and Semiconductors, which responded favorably to the risk-on environment following the market bottom. As a result of the trades, we are now equal weight Financials relative to the S&P 500. We remain overweight Healthcare, Communication Services, Information Technology, and Consumer Discretionary. We are maintaining our overweight in Communication Services which has 2025 earnings growth forecasts which are nearly 8x those of the S&P 500 and trades at a roughly 15% discount to the S&P 500 on a next twelve month (NTM) P/E basis, which is an even greater discount when you factor that earnings growth potential into the price/earnings to growth ratio (PEG) ratio. Within our Info Tech overweight, we are maintaining our exposure in the Semiconductor and Software industries. On an aggregate level, the Active has 2025 revenue growth forecasts of roughly 7.1% versus the S&P 500 at 4.8% and 2025 EPS growth forecasts of 20.0% versus the S&P 500 at 9.3%. (All valuation metrics per FactSet Data).

As we move into the back half of 2025, we strive to deliver on our core belief that investors should keep more of their investment returns, while continuing our dedication to excellent client service, and transparency. We remind investors that the Active pairs well with momentum driven growth strategies while our process and philosophy leans towards the growth-at-a-reasonable-price (GARP). We thank you, our client, for the ongoing partnership and encourage current and prospective investors to contact us with any questions regarding individual ETFs or our asset allocation.

Sincerely,

Kim David Arthur

CEO and Portfolio Manager

Strategy Overview

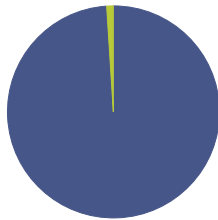

The Main Management Active Sector Rotation is managed in a tax-aware manner from the top-down, primarily using passive sector and industry-based ETFs, paired with a bottom-up approach by focusing on fundamentals, valuations, and industry trends.

1. Fundamentals: The first step of the investment process is to identify sector, industry, and sub-industry-based ETFs that appear undervalued relative to history and the rest of the market based on valuation and growth metrics.

2. Catalysts: The second step is to identify an appropriate catalyst or macroeconomic trend that can help close that valuation discount and lead to price appreciation.

This two-step approach results in sector exposure that is overweight or underweight relative to the benchmark; overweight in favorable sectors and underweight in unfavorable sectors. Additionally, the process results in buy/sell price targets for the sector, along with a time frame that the Investment Committee can actively monitor and discuss.

For clients accessing Main Management's strategies through a model manager platform /turnkey asset management platform (TAMP), please note the following:

1) The gross performance numbers presented are for a Separately Managed Account (SMA) composite of Main Management's strategy. It is not possible for model manager/TAMP clients to invest in the SMA composite, thus it is presented for informational purposes only. It does not reflect actual trading or client experience on a given model manager platform/TAMP. However, clients may invest in a strategy with substantially similar objectives and applications through a model manager program.

2) Since September 6th, 2017 the Active strategy on model manager platforms has been predominantly represented by a single ETF, the Main Sector Rotation ETF. The investment advisor to the Main Sector Rotation ETF is Main Management ETF Advisors of which Main Management LLC owns a majority stake. The ETF has total annual fund operating expenses of 0.77%. The 3.00% net-of-fee returns shown have not factored in the impact of this expense ratio on the performance figures presented, a factor which will reduce the overall performance of the strategy.

3) The net-of-fee returns have been calculated to reflect the highest potential fee charged on the platform of 3.00%. The total net-of-fee return consists of the financial adviser fee, platform fee, trading costs, custody fees and asset management fees. The 3.00% fee is calculated monthly based on the ending monthly account balance.

4) Main Management provides trade signals to a model manager platform when portfolio changes are implemented by the firm for their clients' separately managed accounts (SMAs). Main is able to exercise control and discretion with respect to the trading of their client SMA accounts. However, when providing trade signals to the model manager platform/TAMP, trading discretion rests with the model manager platform/TAMP. Accordingly, any difference in the timing

of trades may result in different performance outcomes for the SMA composite and model manager accounts/TAMP. However, from September 6th, 2017, Main Management has had trading discretion within the Main Sector Rotation Fund which has been the predominant holding of the model manager strategy. This factor may lower tracking error relative to the SMA composite returns.

5) Main Management may utilize option writing to manage downside risks for its clients. However, due to the inherent limitations of the model manager platforms/TAMPs, option writing is not currently available to client accounts. The absence of option writing may result in a performance variance between the Main Management SMA composite and model manager platform/TAMP accounts which do not utilize option writing. However, since September 6th, 2017, Main Management has had discretion to write options within the Main Sector Rotation Fund which is the predominant holding of the model manager strategy. This factor may lower tracking error relative to the SMA composite returns.

6) Main Management has not taken into account the investment objectives, financial situation or particular needs of any individual investor. Many securities transactions are risky and are not suitable for all investors. All securities investments carry risk, including a risk of loss of principal. Past performance does not guarantee future results.

7) As a result of the aforementioned assumptions, the presented performance data shown above will differ from the performance information outlined in the GIPS report of the SMA composite shown on the following page(s). Note that actual performance data for the SMA composite was previously sourced from Advent Axys, and is currently sourced from Tamarac Reporting, while the data on this page is sourced from Morningstar Direct. Reported returns include all realized and unrealized gains and losses as well as the reinvestment of dividends and interest income. For additional fee disclosures please see Part 2 of Form ADV in the fee percentage section.

*Data is displayed for the period: 09/30/02-12/31/02. N.A. - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year. The composite dispersion presented is an asset-weighted standard deviation calculated for accounts in the composite for the entire year. The benchmark index is the S&P 500 Total Return Index. Performance is presented gross and net of fees.

**Firm assets including investment advice provided to Model Delivery Platforms are shown as supplemental information.

***Three-year annualized ex-post standard deviation of the composite and annual composite dispersion are calculated using gross-of-fees returns.

The Active composite - All Accounts has an inception and creation date of September 30, 2002. Main Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Main Management, LLC has been independently verified for the periods August 14, 2002 through December 31, 2024. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Active Composite - All Accounts has had a performance examination for the periods September 30, 2002 through December 31, 2024. The verification and performance examination reports are available upon request.

Many securities transactions are risky and are not suitable for all investors. All securities investments carry risk, including a risk of loss of principal.

Recommendations that the firm makes in the future may not equal the performance of the securities mentioned in this information, if any, or even be profitable at all. Securities mentioned herein do not represent all of the securities purchased, sold or recommended for the firm's clients. Upon request, Main Management will furnish a list of all securities purchased or sold on behalf of clients within the last year.

The firm and its clients, affiliates and employees may, from time to time, have long or short positions in, and buy or sell, the securities or derivatives (including options) thereof, of the ETFs mentioned in these materials and may increase or decrease their positions.

Composite Definition: The objective of Main Management's equity investment strategy is to construct portfolios that will participate in rising markets, and providing some protection in declining markets, over a market cycle. The firm may use securities across all market capitalization ranges and invest in both value and growth names. The Active strategy seeks to identify sectors that are trading at the low end of their historical range on a P/E, P/B, and P/S basis. Main gauges the sentiment of various groups, cash flow into and out of sectors, and past relative performance. The Active can serve as a comprehensive, domestically diversified portfolio solution or be customized for completion around existing holdings. The sell discipline includes taking into consideration state and federal capital gains taxes. The Portfolio Manager may use options on 0-100% of the portfolio. The Portfolio Manager may use non-leveraged inverse positions on 0-50% of the portfolio. Frequency will vary depending on the market environment.

Active Composite - All Accounts was redefined on September 30, 2011 to include the use of options and non-leveraged inverse ETFs. It was redefined prospectively on April 1, 2019 to exclude accounts that elected to not have hedging in the portfolio.

The composite's minimum account size is \$100,000. Accounts are included in each composite after the first full month of performance to the present or to the cessation of the client relationship with the firm. Investment results are time weighted performance calculations representing total return.

Reported returns include all realized and unrealized gains and losses, all dividends and interest income and expense and all transaction costs. Performance results are presented gross and net of management fees. Net-of-fee returns are calculated using actual management fees charged. Management fees are payable in arrears in quarterly installments at the beginning of each calendar quarter and are based on a percentage of net assets in each client's portfolio. The annual investment management fee for the composite is currently 0.85%. Trade date accounting has been used to value the composite throughout the periods presented. Valuations and returns are computed and stated in U.S. dollars. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Past performance does not guarantee future results.

Benchmarks are unmanaged and do not take transaction costs or fees into consideration. It is not possible to invest directly in a Benchmark. Performance figures assume reinvestment of dividends and capital gains.

The SMA fee includes all charges for trading costs, portfolio management, custody, and other administrative fees. For accounts that have been charged an SMA fee, net of fee performance has been reduced by custody and administrative fees in addition to portfolio management and trading fees.

In 2016 the firm assets under management (AUM) were previously overstated due to inclusion of the model delivery platform assets. Since then, AUM have been distinguished from assets under advisement (AUA) which consist of model manager platform assets. The Gross of fee Wrap account performance includes all charges for trading costs, custody and other administrative fees. The Net of fee Wrap account performance includes portfolio management fees in addition to trading costs, portfolio management and other administrative fees.

For clients accessing Main Management's Active strategy through a model platform please note the following: Main provides trade signals to a model manager when portfolio changes are implemented by the firm for their clients' separately managed accounts (SMAs). Main is able to exercise control and discretion with respect to the trading of client SMA accounts. However, when providing trade signal to a model manager platform, trading discretion rests with the model manager. Accordingly, this difference in trading may result in different performance outcomes for the SMA composite and model manager accounts.

Main Management may utilize option writing to manage downside risks for its clients. However, due to the inherent limitations of certain platforms, option writing may not be available to certain client accounts. The absence of option writing may result in a performance variance between accounts which do and accounts which do not utilize option writing.

This strategy may be comprised, in part, of an investment fund registered with the SEC and managed by Main Management LLC ("Main Fund"). To the extent Main Fund is not used for a given strategy, Main Management LLC will generally select from ETFs or other investment companies managed by third parties. Disclosure of the investment advisory fees paid to Main Management LLC by Main Fund, as well as other fees charged, is available in the Main Fund prospectus. As Main Management LLC, or its subsidiary, is compensated by Main Fund for providing management services to it, Main Management LLC thus has a conflict of interest in utilizing Main Fund for such strategies. However, while in some cases Main Fund may have management fees and expenses or performance that differs from other mutual fund or ETF alternatives, in each case where Main Fund is selected for incorporation in a strategy, Main Management LLC has determined that the Main Fund is an appropriate security to implement a Main Management strategy. Main Management LLC may increase or decrease the amount of Main Fund used in any strategy at any time.

Main Management will provide a complete list of composites and Limited Distribution Pooled Fund descriptions and list of Broadly Distributed Pooled Funds upon request.

No part of this material may be copied in any form, by any means, or redistributed without the firm's prior written consent.

A verification has been performed by ACA Performance Services for the periods January 1, 2017 through December 31, 2024, and by Ashland Partners & Company LLP for the periods August 14, 2002 through December 31, 2016. The verification and performance examination reports are available upon request. On June 28, 2017, ACA Performance Services acquired the investment performance service business of Ashland Partners & Company, LLP
