

Smart Stormwater Starts Here

One Platform, Multiple Benefits

- Flood Mitigation - Just in time storage
- Hydromodification Reduction - Minimize erosive flows
- Combined Sewer Overflow Mitigation - Optimize upstream storage and downstream release
- Water Quality Improvement - Increase residence time
- Water Conservation - Maximize capture and reuse
- Maximize Asset Performance - Improve compliance and O&M

What our customers say:

“We are harnessing technology to meet water quality and quantity goals.”

Lindsay DeMarzo

Stormwater Programs Manager,
Howard County Government

“The entire [design and implementation] process was very efficient and stress free.”

Jason Hetrick, P.E., CFM

Senior Water Resources Manager
McCormick Taylor

Clean Water, Resilient Communities

ECONOMICAL

60-90% CAPEX and OPEX savings and accelerated outcomes

RESILIENT

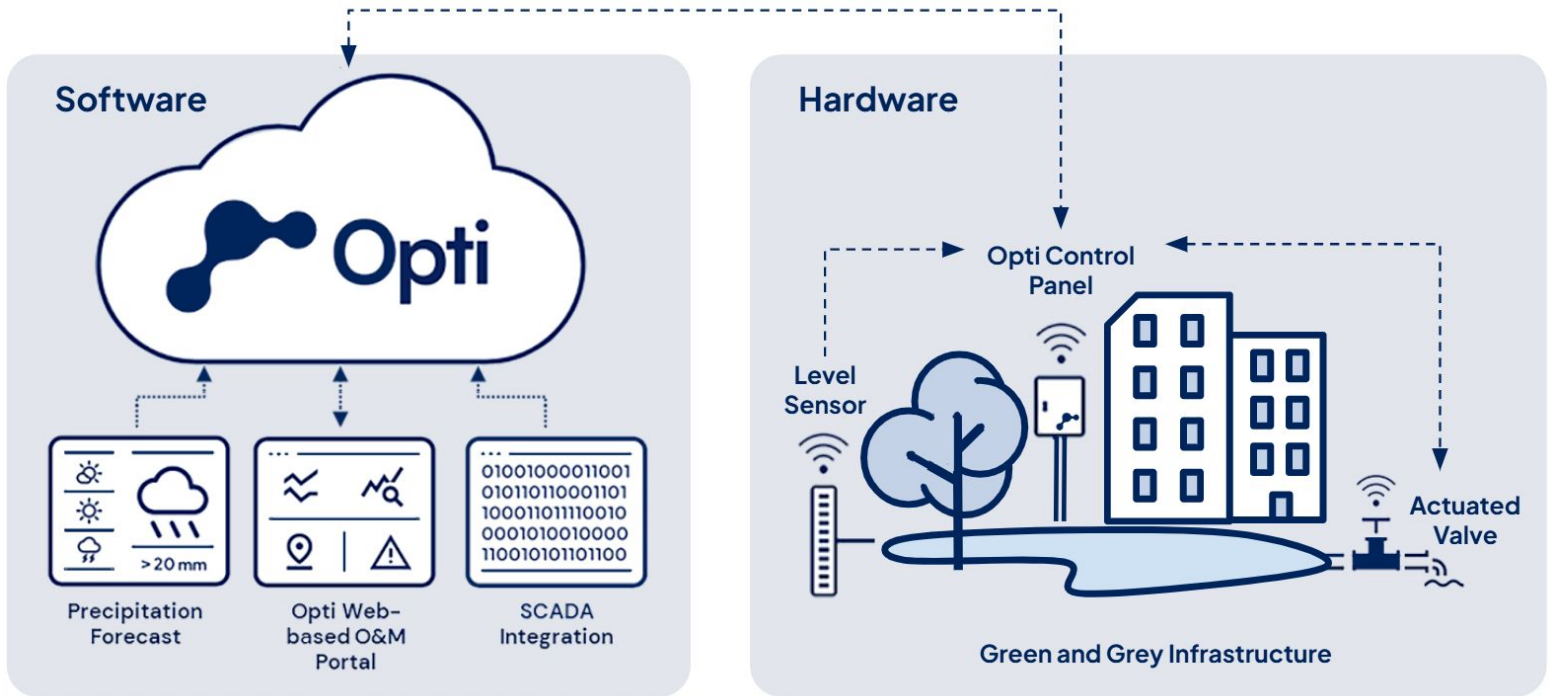

Up to 10x performance improvement and adaptive management

PEACE OF MIND

Improved safety and compliance through continuous monitoring

Continuous Monitoring and Adaptive Control

Opti revolutionizes stormwater management with a cloud-based solution that makes infrastructure smart through continuous monitoring and adaptive control (CMAC). By seamlessly combining real-time sensor data and weather forecasts, our platform actively manages stormwater flows and storage, ensuring efficiency and resilience across the watershed. With Opti, every drop is managed smarter, making our communities safer and our environments healthier.

About OptiRTC

Opti is the leading provider of digital adaptive stormwater control solutions. With over 300 deployments to date, Opti empowers customers and partners to address the impacts of climate change, aging infrastructure, urbanization, and water pollution, enabling them to secure the sustainability of our communities and natural resources. Our cloud-based platform optimizes stormwater asset performance with immediate results while providing ongoing, long-term functional insights to inform future investment priorities.
