

Give clients the update before they have to ask.

FOR EXAMPLE

A client update is due. You're still checking email, team chat and the work record to find out whether the last request was handled.

QTalo brings client requests and follow-ups that may need attention into one view across your email, chat and work tools.

THE 30-DAY PROOF SPRINT

\$495 one time • No automatic renewal

Test QTalo on one client-delivery process where missed follow-through or repeated checking matters. The 30 days start once your tools are synced and the scope is agreed.

Find out whether your team can act sooner or spend less time checking that client work is on track. We review the results with you; you decide whether to continue, adjust the focus or stop.

WHAT YOU GET

START WITH A FOCUSED LIST

Review client requests and follow-ups that may need attention, rather than starting with every message.

GO STRAIGHT TO THE SOURCE

Each item links to the original message or work record, so you can check the context without first hunting for it.

YOUR TEAM MAKES THE CALL

Your people decide what to do and communicate with the client.

HOW QTALO FITS

KEEP YOUR CURRENT TOOLS

Your team continues working in the software it already uses.

QTALO HANDLES SETUP

We coordinate with IT when needed. You choose one person to lead the Sprint and give brief feedback.

WORKS WITH:

Gmail

Outlook

Slack

Jira

BOOK A CALL TO SCOPE YOUR PROOF SPRINT

We'll use the 30-minute call to choose where to start and confirm the software and setup involved before you commit.

After the Sprint: continue with the process you tested for \$795/month. Add another client-delivery process for \$495/month.
