

Organisation Scope

The Quality Management System covers the end-to-end design, manufacture, assembly, integration, testing, and operations of satellites, as well as the provisioning of space-based data, insights, and actionable information services to customers.

Quality Policy

Open Cosmos is dedicated to solving customer problems with insights from space. Whether this is monitoring agricultural yields, assessing the damage of oil spills, or providing navigation solutions, we believe that data from satellites is the most effective and sustainable way of achieving this.

To support this vision and guarantee mission success, Top Management is fully committed to operating a robust Business Management System (BMS) aligned with the requirements of the ISO 9001:2015 standard.

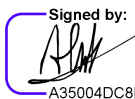

Our leadership and all employees are dedicated to the following core principles:

- **Customer Focus:** Consistently delivering space missions, products, and services that meet or exceed our customers' expectations, ensuring on-time, on-quality, and on-cost delivery to solve their specific challenges.
- **Compliance & Integrity:** Satisfying all applicable statutory, regulatory, and customer requirements relevant to our space operations and industry.
- **Strategic Alignment:** Providing a clear framework for establishing, monitoring, and reviewing our quality objectives to support the strategic direction and the context of the organization.
- **Continual Improvement:** Proactively identifying opportunities to enhance our processes, products, and the overall effectiveness of our Integrated Management System.

Top Management ensures that this Quality Policy is communicated, understood, and applied across all levels of Open Cosmos, and is made available to relevant interested parties. We foster a culture where every team member takes ownership of quality in their daily activities, knowing that our work directly impacts global sustainability and problem-solving.
