

SOLUTION BLUEPRINT SA-1: 3 SECURITY AIRLOCK

FireBreak protection to enforce single access airlock between 3 systems

- Name** Security AirLock
- Application** 3-zone environments
- Sectors** Enterprise, Utility, CNI, Defense
- Description** A Firebreak is positioned between three logical zones—internal system, intermediate zone, and external network—in a configuration similar to a space station airlock. Only one connection point is ever open at a time, guaranteeing no continuous data path. This ensures true physical separation across trust boundaries and prevents cross-contamination between zones.
