

SPEED DETECTION REPORTING

Solution for tracking speeding cars

SPEED DETECTION REPORTING solution is based on instantaneous speed measuring based on Axis radar-video fusion camera (Q1656-DLE or Q1686-DLE), accurate license plate and vehicle detection and recognition in CAMMRA AI app installed on the same camera and easy-to-deploy backend software equipped with appropriate logic for displaying speeding cars and possibility to set an alarm based on speeding. Additionally users may get visual insights into the traffic in form of dashboards.

- > Centralized database with all vehicle parameters including their speed
- > Results filtered by speed threshold (speed limit manual setup for every camera)
- > Lists speeding vehicles available for export
- > VMS integration for video verification and alarms
- > Traffic and vehicle statistics on various additional dashboards
