The flanged bearing housings are designed for the mounting of self-aligning ball bearings or self-aligning roller bearings on adapter sleeves. The bearing seat inside the housing is precision-machined to the G7 tolerance class. As the standard option, these housings are manufactured from gray cast iron. However, upon request, we can also supply housings made from other materials. The housings come equipped with felt seals and are designed for grease lubrication. Additionally, we offer a wide assortment of variations with different sealing options to cater to your specific needs.
