

RSFH

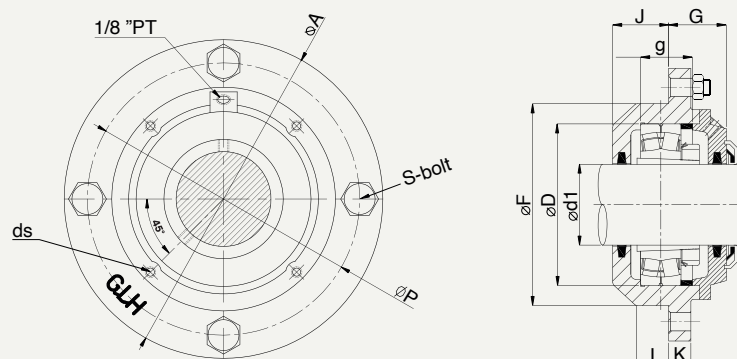

RSFH Bearing

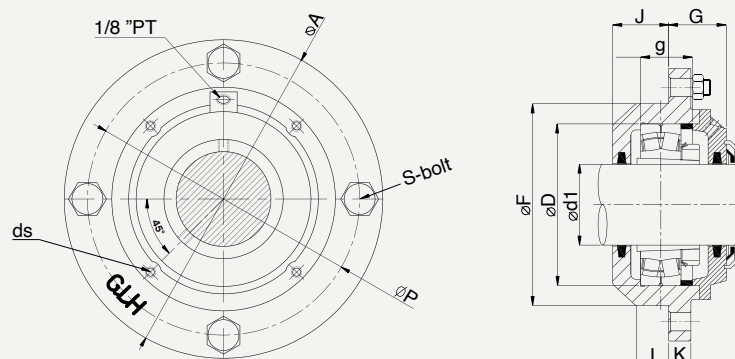

The RSFH flange bearing housings from GLH are round flange housings specifically designed for use with spherical roller and self-aligning ball bearings on adapter sleeves. Thanks to the wide recess at the bearing seat level, they can be installed in a designated bore.

A key advantage of the RSFH housings is their optimized load absorption: the integrated rolling bearings absorb the applied forces significantly more efficiently and directly than conventional externally mounted flange bearings. This is particularly beneficial for internally mounted conveyor belt drums, where the drum and housing rotate around a fixed shaft, ensuring stable and long-lasting bearing performance.

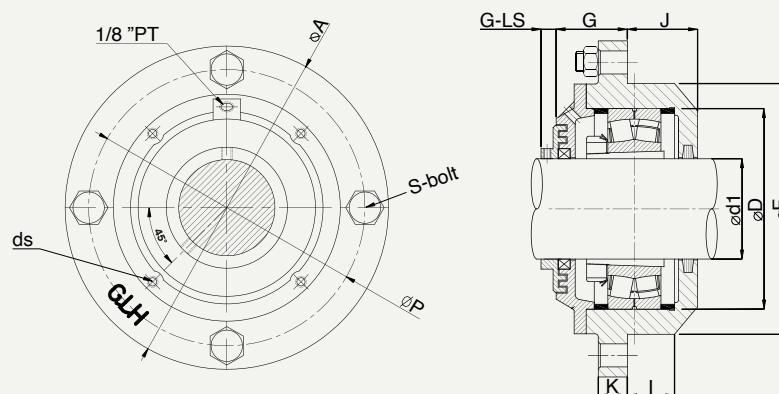

Our RSFH housings are available in large dimensions directly from stock.
